

## Index

### **a**

activation-induced marker expression 247  
active immunization 285  
adaptive immune system  
  antigen-specific T cells 168, 202–203, 210, 212, 213, 362  
  B cells, development of 204–205  
  diversity of 201–202  
  somatic hypermutations 205–206  
  T-cell phenotypes and functions 203–204, 209  
  T-follicular helper (TFH) 204, 247, 269, 338  
  T-helper cells, antigen-specific 209  
  T-helper type 1 (Th1) 278  
alkaline technique 179  
alphavirus-based expression 111  
alphavirus-based replicon RNA (repRNA) 131, 292, 315  
altered peptide ligand (APL) vaccination 216  
anti-reverse cap analogs (ARCAs) 44, 355  
antibody-dependent cellular cytotoxicity (ADCC) 206, 269  
antigen-presenting cells (APCs) 8, 29, 31, 91, 205, 214, 269, 327, 337, 340  
antigen-specific T cells 168, 202, 203, 210–213, 362  
antimicrobial resistance (AMR) 329  
antiretroviral therapy (ART) 267  
apolipoprotein B 11, 208, 210, 211

### atherosclerosis

  antigen-specific T-helper cells in 209  
  autoimmune component of 208–209  
  B cells and autoantibodies in 209–210  
  Beta-2-glycoprotein I 211  
  heat-shock proteins (HSPs) 211  
  LDL-C 210–211  
  vascular endothelial growth factor (VEGF) 213  
virus-derived antigens 211–212

### autoimmune diseases

  break of tolerance 206–207  
  immunomodulation of 207–208  
  mRNA-based peptide vaccination  
    strategies in 218–219

autoimmune encephalomyelitis 216–218  
autoimmunity 201–208, 211–217, 220, 223, 225

### **b**

bacillus Calmette–Guérin (BCG) 325  
B cells  
  development of 204–205  
  noncanonical functions of 206  
  somatic hypermutations of 205–206  
blood-feeding arthropods 285  
BNT162b2 3, 8, 11, 14, 15, 29, 30, 33–35, 43, 46, 48, 52, 53, 85, 128, 164, 181, 243, 244, 247–249, 252, 311  
booster immunizations 130, 139, 142, 251–252, 262, 272, 273

*Borrelia burgdorferi* 288, 290, 308  
 broadly neutralizing antibodies (bNAbs) 260

**c**

cancer  
 immunotherapy 47, 130, 267, 337–339, 343, 364  
 mRNA vaccines 89–90  
 tumor-specific antigens 342  
 vaccination 339, 346–349

cap 35–37, 188  
 CleanCap technology 43, 181, 355, 356, 364  
 homeostasis 37  
 7-methyl guanosine (m7G) 354, 355

capping 35, 37, 42–45, 180, 181, 187, 188, 353–355

caspase activation and recruitment domain (CARD) 31

caspase recruitment domain-containing protein 15 (CARD15) 31

cationic nanoemulsion delivery 270

CD4<sup>+</sup> T cells 203–204, 210–212, 218, 247, 269, 270, 316, 327, 328, 337, 338  
 activation of 327, 328  
 responses 273, 276, 278

CD8<sup>+</sup> T cells 15, 30, 31, 35, 48, 53, 122, 125, 130, 138, 141, 142, 203, 204, 206, 211, 220, 247, 249–251, 267, 276, 278, 314–316, 327–329, 337, 338, 340, 343–345, 357, 360, 361, 367, 368, 370  
 activation 53, 278, 327  
 responses 15, 48, 122, 125, 130, 138, 141, 247, 250, 267, 269, 276, 292, 306, 307, 311, 348, 364

CD40 205, 267, 268, 327, 342, 345, 361, 366, 368

Chagas disease 305, 311, 316–317

circRNAs  
 biogenesis of 162  
 ElciRNAs 162  
 exonic circRNA 163

intronic circRNA 163  
 physiological functions of 162–163  
 protein enzymatic RNA circularization

165

vaccine 168, 169  
 closed-loop model 35, 39, 40  
 coding sequence 37, 39, 41–42, 74, 86, 88, 307, 357, 364

complement activation-related pseudoallergy (CARPA) 48

COVID-19  
 pandemic 3, 14, 52, 128, 243–253, 289, 307, 310, 326, 328, 329, 331  
 vaccines 84–89

Crimean–Congo hemorrhagic fever virus (CCHFV) 286, 291–292

crossflow filtration 182

CVD autoimmunity 212–215

CVnCoV 249–250

cyclic GMP–AMP (cGAMP) 162

cytosolic nonself RNA sensors 31, 34

cytotoxic genes 139

cytotoxic T lymphocytes (CTLs) 15, 30, 31, 35, 48, 53, 122, 125, 130, 138, 141, 142, 203, 204, 206, 211, 220, 247, 249–251, 267, 276, 278, 314–316, 327–329, 337, 338, 340, 343–345, 357, 360, 361, 367, 368, 370

**d**

damage-associated molecular patterns (DAMPs) 32

dendritic cells (DCs) 267, 327, 341

1,2-dioleoyl-3-dimethylammonium

propane (DODAP) 10

1,2-dioleoyl-3-trimethylammonium–propane (DOTAP) 360

1,2-dioleoyl-sn-glycero-3-phosphoethanolamine (DOPE) 360

1,2-di-*O*-octadecenyl-3-trimethylammonium propane (DOTMA) 10, 360

direct *in vivo* mRNA delivery 265, 267–269

- DNA replicon system 111  
 DNA replicon vectors 111, 121, 126, 138  
 DNA–RNA hybrid formation 181  
 DNA vaccination 212–214  
 doggybone DNA (dbDNA) 179  
 DOTMA/DOPE liposomes 13  
 dynamic light scattering 188
- e**  
 Ebola virus (EBOV) 122  
 engineered gp120 outer-domain probe (eOD-GT8) 273  
 Env-Gag VLP optimization 277
- f**  
 fill-to-finish 186
- g**  
 good manufacturing practices (GMP) 75, 190, 309  
 guide RNA 71, 73, 74, 78
- h**  
 H/ACA snoRNP 71–73  
 heat shock proteins (HSPs) 211, 356  
 helminths 303, 313, 317  
 high-pressure liquid chromatography (HPLC) 45, 167, 182, 188  
 HIV-1 260–261  
 mRNA-based vaccines 263–271  
 homeodomain interacting protein kinase 2 (HIPK2) gene 162  
 human leukocyte antigen (HLA) 220, 316, 337  
*Hyalomma* genus ticks 292  
 hydrogen bond donor 70, 77, 83, 84
- i**  
 IFN-stimulated genes (ISGs) 32  
 immunologic adjuvants modulate 222  
 immunostimulatory genes 109, 130, 131, 139, 140, 143  
 immunotherapy  
     with immunoglobulins 214–215
- TCR/CAR T-cell 215  
 incomplete Freund's adjuvant (IFA) 221, 222, 343  
 innate immune response  
     in humans 33–34  
     in mice 34–35  
 interferon-gamma release assay (IGRA) 331  
 internal ribosome entry site (IRES) 7, 162  
 intracellular cytokine staining 247  
 intramuscular (IM) administration 14, 29, 121, 123, 125, 126  
*in vivo* mRNA delivery 265, 267–269  
*in vitro* transcription (IVT)  
     production 42–44  
     reaction 71, 73–75, 80–82, 84, 180–184, 289  
     of RNA, 74–75  
     stage 180  
 irreversible electroporation (IRE) 142  
*Ixodes cookei* 291  
*Ixodes scapularis* 286, 290, 291
- k**  
 Kunjin virus (KUN) expression systems 111
- l**  
 Langat virus 291  
 leishmaniasis 130, 305, 311, 315, 316  
 lipid nanoparticles (LNP) 11, 269, 270, 290  
 industrial standards 186  
 and mRNA encapsulation 185–186  
 systemic delivery of nucleic acids 10–12  
 lipoarabinomannan (LAM) 326  
 lipopolplex 170  
 lithium chloride 182  
 low-density lipoprotein cholesterol (LDL-C) 208, 210, 211  
 Lyme disease 286, 288, 308  
 LYMErix 288

**m**

major histocompatibility complex class II  
 (MHC class II) 327  
 dependent autoimmunity 208  
 variability 222  
 malaria 130, 292, 293, 303–318  
*Measles virus* 113  
 migration inhibitory factor (MIF) 313  
 mitochondrial antiviral signaling protein  
 (MAVS) 31  
 mix-and-match approach 129  
 monophosphoryl lipid A (MPLA) 345  
 mRNA-1273 3, 8, 11, 14, 29, 34, 46, 48,  
 51, 52, 85, 128, 164, 243, 247–248,  
 252  
 mRNA  
 adjuvants for 366–368  
 clinical application 368–373  
 delivery and formulation 358–362,  
 365  
 innate immune sensing 362–365  
 IVT 42–44  
 manufacturing and design 353–358  
 posttranscriptional modification  
 44–45  
 purification, of IVT 45  
 mRNA capping 35, 37, 42–45, 180, 181,  
 187, 188, 353–355  
 mRNA pseudouridylation  
 of sense codons decoding 80  
 on nonsense suppression 78–80  
 mRNA-transduced dendritic cells 265,  
 267  
 mucosal delivery 54, 276  
 multiangle light scattering 188  
 multiple array antigen presentation  
 277–278  
 multiple sclerosis (MS)  
 antigen-specific immunity in 215–216  
 mutation-guided vaccines 262  
*Mycobacterium tuberculosis* (Mtb)  
 (pre-)clinical development 330–332  
 primary TB 325  
 protective immunity against 326–328  
 suitability and advantages of 328–330

**n**

neoantigens 344  
 neutralizing antibodies (nAbs) 41, 49,  
 85, 87, 88, 113, 121, 124, 125,  
 127–130, 137, 244, 247–251, 259,  
 260, 269, 270, 273, 274, 276–278,  
 285, 291, 306, 328  
 NMD pathway 80  
*N1-methyl-Ψ* 70, 74, 75, 77, 82–91, 354  
*Nobivac-Lyme* 288  
 nucleoside modifications 14, 32, 44, 69,  
 77, 90, 164, 177, 307, 310

**o**

2',5'-oligoadenylate synthetase (OAS) 32  
 oncolytic viruses 131, 140–143  
 open reading frame (ORF) 6, 41, 164,  
 352, 354, 355  
*Orthopneumoviruses* 127  
*OspA*-based protein vaccines 288  
 outer-surface protein A (*OspA*) 288

**p**

parasitic infections 303–305  
*Chagas disease* 316–317  
 helminths 313, 317  
*leishmaniasis* 315–316  
 malaria 311–314  
 prevalence 304–305  
*toxoplasmosis* 315–316  
 vaccine development 305–307  
 passive immunoprophylaxis 260  
 pathogen-associated molecular patterns  
 (PAMPs) 30, 201, 326, 341  
 pattern recognition receptors (PRRs) 30,  
 201, 326, 344  
 peptide vaccine 212, 216, 218–227  
*Plasmodium falciparum* circumsporozoite  
 protein (PfCSP) 292–293  
 phage polymerases 5  
 plasmid DNA (pDNA) 111, 112, 120,  
 124–126, 130, 131, 137, 139, 179,  
 353  
 plasmid DNA production 178–180  
*Plasmodium sporozoite* 293

- poly(A) polymerases 39–41  
 poly-A-binding protein (PABP) 39  
 polyethyleneiminestearic acid (PSA) 268  
 posttranscriptional modification 8, 44,  
     45, 51  
 Powassan virus 286, 289, 291  
 premembrane (prM) protein 291  
 pre-mRNA splicing 35, 77–80  
 preferentially expressed antigen in  
     melanoma (PRAME) 369  
 prostate-specific membrane antigen  
     (PSMA) 138  
 protein/RNA interaction 39  
 protein translation 45, 77–80, 161, 163,  
     250, 315  
 pseudouridine 44  
     the Fifth Nucleoside 69–70  
     immune system 80–82  
     pre-mRNA splicing and protein  
         translation 77–80  
     RNA detection 75–77  
 pseudouridine synthase (PUS1) 71, 73,  
     79  
 $\Psi$  detection, RNA  
     direct  $\Psi$  sequencing methods 76–77  
     indirect  $\Psi$  sequencing methods 76  
 purification, of IVT mRNA 45  
 PUS enzymes 71
- r**
- RABV system 113  
 receptor-binding domain (RBD) 88, 168,  
     244  
 relapsing fever 286  
 replication deficient system 111  
 replication proficient system 110, 111  
 Replicon-based RNA vaccine platform  
     292  
 reporter gene expression 131  
 Rhabdovirus expression systems 112  
 ribonucleoproteins (RNPs) 35, 38, 71,  
     72  
 Ribozymes 112, 167, 188  
 RNA-binding proteins (RBP) 35, 37, 38,  
     77
- RNA administartion methods  
     direct in vivo mRNA delivery 265,  
         267–269  
     in vivo mRNA delivery 265, 267–269  
     intramuscular (IM) administration  
         14, 29, 121, 123, 125, 126
- RNA delivery  
     biological cell membranes to liposomal  
         drugs 8–10  
     ionizable lipid nanoparticles 10–12
- RNA-dependent pseudouridylation  
     71–73  
 RNA-guided pseudouridylation 72–74  
 RNA-independent pseudouridylation  
     71
- RNA-lipoplexes (RNA-LPX) 217, 218  
 RNA polymerase enzyme 178  
 RNA/protein interaction 35, 37, 38, 77  
 RNA pseudouridylation  
     artificially 73–75  
     naturally 71–73  
 RNA stabilization 265  
 rRNA 71–72, 77–78, 83, 91
- s**
- Salp14 290  
 $\Psi$  sequencing methods 76, 77  
 severe acute respiratory syndrome  
     coronavirus 2 (SARS-CoV2)  
     BNT162b2-Pfizer/BioNTech 248–249  
     mRNA-1273-Moderna 247–248  
 selective organ targeting (SORT) strategy  
     47  
 self-amplifying mRNA 88, 89, 244, 251,  
     267, 270–271, 315  
 self-assembling nanoparticles 274, 275,  
     277  
 self-replicating RNA  
     against infectious diseases 114–120  
     expression systems for 109–113  
     vaccines against cancers 130–143  
     vaccines against infectious diseases  
         113–130  
 signal transducer and activator of  
     transcription 3 (STAT3) 345

- simian–human immunodeficiency virus (SHIV) 260, 270
- single-cell universal polyA-independent RNA sequencing (SUPeR-seq) 161
- single-chain antibody (scFv) 142, 293
- single-chain variable fragments (scFv) 215
- single-stranded RNA (ssRNA) 7, 30, 82, 89, 109, 165
- slow delivery 276–277
- small interfering RNA (siRNA) 11, 366 therapeutics 46
- small nucleolar ribonucleoproteins (snoRNPs) 71
