Preface *xi*

Acknowledgments *xv*

1 Background and Overview *1*

- 1.1 Introduction *1*
- 1.2 Ionic Liquids *2*
 - 1.2.1 Acidic ILs *2*
 - 1.2.2 Basic ILs *6*
 - 1.2.3 Neutral ILs with HB Donor/Acceptor *12*
 - 1.2.4 Chiral ILs *14*
- 1.3 Structure of This Book *15*
- References *17*

2 Ionic Liquid–Catalyzed Transformation of Carbon Dioxide to Chemicals Under Metal-free Conditions *23*

- 2.1 Synthesis of Organic Carbonates *25*
 - 2.1.1 Synthesis of Symmetrically Linear Carbonates *25*
 - 2.1.2 Synthesis of Asymmetrically Linear Carbonates *28*
 - 2.1.3 Synthesis of Cyclic Carbonates *30*
 - 2.1.3.1 Cyclization of Epoxides with CO₂ *31*
 - 2.1.3.2 Cyclization of Propargylic Alcohols with CO₂ *46*
- 2.2 Synthesis of N-containing Heterocycles *49*
 - 2.2.1 Synthesis of Quinazoline-2,4(1H, 3H)-Diones *50*
 - 2.2.2 Synthesis of 2-Oxazolidinones *52*
 - 2.2.3 Synthesis of Benzimidazolones *60*
- 2.3 Reductive Transformation of CO₂ *60*
 - 2.3.1 Formylation of Amines with CO₂ and Hydrosilanes *60*
 - 2.3.2 Reductive Cyclization of X (NH, S)-*o*-substituted Anilines with CO₂ and Hydrosilanes *67*
- 2.4 Synthesis of Other Compounds *67*
- 2.5 Remarks and Perspectives *70*
- References *71*

3	Ionic Liquid–Mediated Reductive Transformation of Carbon Dioxide with Hydrogen	79
3.1	Direct Hydrogenation of CO ₂	80
3.1.1	CO ₂ Hydrogenation to CO	80
3.1.2	CO ₂ Hydrogenation to Formic Acid	81
3.1.3	CO ₂ Hydrogenation to CH ₄	85
3.1.4	CO ₂ Hydrogenation to C ₂₊ Hydrocarbons	86
3.2	N-formylation or N-methylation Reaction of Amines with CO ₂ /H ₂	89
3.3	Hydroformylation of Olefin with CO ₂ /H ₂	94
3.4	Hydromethylation of Olefin with CO ₂ /H ₂ and Amines	97
3.5	Carbonylation of Alcohol/Ethers with CO ₂ /H ₂	99
3.6	Remarks and Perspectives	102
	References	102
4	Electroreduction of Carbon Dioxide in Ionic Liquid–Based Electrolytes	105
4.1	Fundamentals of CO ₂ Electroreduction	107
4.1.1	Basic Principles of CO ₂ Electroreduction	107
4.1.2	Reaction Pathways of CO ₂ Electroreduction	108
4.2	IL-based Electrolytes for CO ₂ Electroreduction	109
4.2.1	CO ₂ Activation by IL-based Electrolytes	110
4.2.2	Influence of Chemical Structures of IL-based Electrolytes	111
4.2.2.1	Influence of Cation Structures	111
4.2.2.2	Influence of Anion Structures	113
4.2.2.3	Structural Influence of ILs for Homogeneous Electrocatalysts	115
4.2.3	Influence of Composition of the IL-based Electrolytes	117
4.3	Electroreduction of CO ₂ to Various Chemicals in IL-based Electrolytes	121
4.3.1	Electroreduction of CO ₂ to HCOOH	122
4.3.1.1	Ag-based Catalysts	122
4.3.1.2	Bi-based Catalysts	124
4.3.1.3	In-based Catalysts	124
4.3.1.4	Pt-based Catalysts	124
4.3.1.5	Sn-based Catalysts	124
4.3.1.6	Cu-based Catalysts	124
4.3.1.7	Mo-based Catalysts	125
4.3.1.8	Pb-based Catalysts	125
4.3.2	Electroreduction of CO ₂ to CO	126
4.3.2.1	Molecular Electrocatalysts	126
4.3.2.2	Single Atomic Catalysts	130
4.3.2.3	Metal Catalysts	131
4.3.2.4	Transition Metal Dichalcogenide Catalysts	133
4.3.2.5	Metal-free Catalysts	134
4.3.3	Electroreduction of CO ₂ to CH ₃ OH	134
4.3.4	Electroreduction of CO ₂ to CH ₄	136

4.3.5	Electroreduction of CO ₂ to C ₂₊ Compounds	137
4.4	Electrotransformation of CO ₂ into Value-added Chemicals	140
4.4.1	Electrosynthesis of Carboxylic Acids	141
4.4.2	Electrosynthesis of Organic Carbonates with CO ₂	144
4.4.3	Electrosynthesis of Organic Carbamates from CO ₂ and Amines	145
4.4.4	Electrosynthesis of Methylanilines from CO ₂	146
4.5	Remarks and Perspectives	147
	References	150
5	Ionic Liquid–Catalyzed Chemical Transformation of Lignocellulose	157
5.1	Ionic Liquid–Catalyzed Transformation of Cellulose and Its Derivatives	159
5.1.1	Hydrolysis of Cellulose to Reducing Sugars	159
5.1.2	Dehydration of Cellulose and Glucose to 5-Hydroxymethylfurfural	160
5.1.3	Dehydration of Cellulose and Glucose to Levulinic Acid	164
5.1.4	Oxidation of Cellulose to Formic Acid	167
5.1.5	Transesterification of Cellulose to Cellulose Esters	168
5.1.6	Pyrolysis of Cellulose to 5-Methylfurfural	169
5.2	Ionic Liquid–catalyzed Transformation of Hemicellulose and Xylose to Furfural	170
5.3	Ionic Liquid–Catalyzed Transformation of Lignin and Its Platforms	172
5.3.1	Direct Depolymerization of Lignin	173
5.3.2	Oxidative Depolymerization of Lignin and Its Derivatives	176
5.3.2.1	Oxidative Depolymerization of Lignin to Vanillin	176
5.3.2.2	Oxidative Depolymerization of Lignin and Derivatives to Aromatic Carboxylic Acids	178
5.3.2.3	Oxidative Cleavage of Lignin Aromatic Unit to Diethyl Maleate	182
5.4	Remarks and Perspectives	184
	References	185
6	Ionic Liquid–Catalyzed Oxidation Reactions	189
6.1	Oxidation of Alcohols/Aldehydes	190
6.1.1	Oxidation of Primary Alcohols to Esters	190
6.1.2	Oxidation of Alcohols to Aldehydes or Ketones	193
6.2	Oxidation of Organic Sulfides and Oxidative Desulfurization	199
6.2.1	Oxidation of Organic Sulfides	199
6.2.2	Oxidative Desulfurization	205
6.2.2.1	Polyoxometalates-based IL Catalysts for Oxidative Desulfurization	206
6.2.2.2	Acidic Ionic Liquids for Oxidative Desulfurization	210
6.3	Oxidative Cyclization of Olefins and Allylic Alcohols	213
6.4	Oxidation of Amines	218
6.5	Baeyer–Villiger Oxidation	221
6.6	Oxidation of Other Compounds	224
6.6.1	Oxidation of Oxime	224
6.6.2	Oxidation of Toluene	224

6.6.3	Oxidation of Organic Halides	225
6.7	Remarks and Perspectives	225
	References	226
7	Ionic Liquid–Catalyzed Water–Involved Reactions	229
7.1	Dehydrative Esterification	229
7.1.1	Acidic Ionic Liquids	230
7.1.2	Basic Ionic Liquids	236
7.2	Dehydrative Etherification of Alcohols	237
7.3	Dehydration Alkenylation	243
7.4	Dehydrative Amidation	244
7.5	Ionic Liquid–catalyzed Hydration Reaction	249
7.5.1	Hydration of Alkynes	250
7.5.2	Hydration Reaction of Propargyl Alcohols	250
7.5.3	Hydration Reaction of Nitriles	254
7.5.4	Hydration of Epoxides	257
7.6	Hydrolysis of Esters/Ethers	260
7.6.1	Hydrolysis of Ester	260
7.6.2	Hydrolysis of Cyclic Carbonate	262
7.7	Remarks and Perspectives	264
	References	264
8	Ionic Liquid–Catalyzed Other Organic Reactions	269
8.1	Alkylation Reaction	269
8.1.1	Alkylation of Olefins	269
8.1.2	Friedel–Crafts Alkylation	271
8.2	Michael Addition Reaction	274
8.2.1	Aza–Michael Reaction	274
8.2.2	Synthesis of Chiral Chemicals	277
8.3	Diels–Alder Reactions	281
8.4	Markovnikov Addition	284
8.5	Knoevenagel Condensation	290
8.6	Aldol Condensation Reaction	295
8.7	Ring-Closing C–O/C–O and C–O/O–H Bond Metathesis	298
8.7.1	Ring-Closing Metathesis of Aliphatic Diethers	298
8.7.2	Metathesis of Alkylalkoxy Alcohols	301
8.8	Remarks and Perspectives	303
	References	303
9	Ionic Liquid–Catalyzed Recycling of Spent Polymers	309
9.1	Degradation of Polyesters	310
9.1.1	Degradation of PET	310
9.1.1.1	Hydrolysis of PET	311
9.1.1.2	Alcoholysis of PET	312
9.1.1.3	Aminolysis of PET	323
9.1.2	Degradation of PLA	324

9.1.2.1	Alcoholysis of PLA	324
9.1.2.2	Hydrolysis of PLA	327
9.1.2.3	Aminolysis of PLA	330
9.1.3	Degradation of PHB	332
9.1.3.1	Methanolysis of PHB	332
9.1.3.2	Decomposition of PHB	333
9.1.4	Degradation of PSS	334
9.1.5	Degradation of PC	336
9.1.5.1	Hydrolysis of PC	337
9.1.5.2	Alcoholysis of PC	338
9.1.5.3	Ammonolysis of PC	340
9.1.6	Methanolysis of PCL	342
9.1.7	General Approaches to Decompose Polyesters to Carboxylic Acids	343
9.2	Degradation of Polyamides	347
9.3	Upcycling of Polyolefins	348
9.4	Co-upcycling of Polyvinyl Chloride and Polyester	350
9.5	Remarks and Perspectives	351
	References	351
	Index	357
