Preface *ix*

- 1 Necessity and Advantages of Developing Rechargeable Organic Batteries 1**
 - 1.1 Current Electrochemical Energy Storage Technologies 1
 - 1.2 Rechargeable Organic Batteries 3
 - 1.3 Goal, Scope, and Organization of this Book 4
 - 1.3.1 Working Principles and Fundamental Properties 4
 - 1.3.2 A Selection of an Organic Electrode 4
 - 1.3.3 EES Applications 5
 - 1.3.4 Practical Applications 6
 - 1.3.5 Key Challenges 6
 - Acknowledgments 7
 - References 7

- 2 Redox Mechanisms and Characterization Methods of Organic Electrode Materials 13**
 - 2.1 Introduction 13
 - 2.2 Carbonyl Materials 14
 - 2.2.1 Redox Mechanisms 14
 - 2.2.2 Characterization Methods 16
 - 2.3 Organosulfide Materials 19
 - 2.3.1 Redox Mechanisms 19
 - 2.3.1.1 Redox Mechanisms of n-type Organosulfides 20
 - 2.3.1.2 Redox Mechanisms of p-Type Organosulfides 20
 - 2.3.2 Characterization Methods 21
 - 2.4 Radical Materials 23
 - 2.4.1 Redox Mechanisms 23
 - 2.4.2 Characterization Methods 23
 - 2.5 N-Containing Active Materials 24
 - 2.5.1 Redox Mechanisms of Azo Materials 24
 - 2.5.2 Redox Mechanisms of Imine Materials 25
 - 2.5.3 Redox Mechanisms of Conjugated Sulfonamides 25

2.5.4	Redox Mechanisms of Nitroaromatic Materials	25
2.5.5	Redox Mechanisms of Other N-containing Active Materials	27
2.5.6	Characterization Methods	28
2.6	Summary and Outlook	30
	Acknowledgments	31
	References	31
3	Carbonyl-Based Organic Cathodes	35
3.1	Introduction	35
3.2	Quinone Compounds	36
3.2.1	Quinones for LIBs	36
3.2.2	Quinones for SIBs	42
3.2.3	Quinones for Aqueous ZIBs	43
3.2.4	Quinones for Other Metal-Ion Batteries	49
3.2.5	Quinones for RFBs	52
3.3	Imides	57
3.4	Anhydrides	59
3.5	Summary and Outlook	61
	Acknowledgments	62
	References	62
4	Sulfur-Containing Organic Cathodes	65
4.1	Introduction	65
4.2	Organodisulfide	66
4.3	Organopolysulfides	68
4.3.1	Basic Organopolysulfides	68
4.3.2	Thiol-derived Organopolysulfides	73
4.4	Heteroatom-Containing Organosulfides	78
4.4.1	Organosulfides-Containing N-Heterocycles	78
4.4.2	Organosulfides-Containing Selenium	82
4.4.3	Organosulfides-Containing Other Heteroatom	85
4.5	Organosulfur-Inorganic Hybrid Cathodes	88
4.6	Other Organosulfur Cathodes	93
4.7	Summary and Outlooks	96
	Acknowledgments	97
	References	98
5	Radical-Based Organic Cathodes	101
5.1	Introduction	101
5.2	Radical for Metal-Ion Battery	102
5.2.1	PTVE Radical	103
5.2.2	Other TEMPO-Based Nitroxyl Radicals	104
5.2.3	Other Nitroxyl Radicals	106
5.2.4	Other Radical Electrode Materials	107
5.2.5	Other Effect of TEMPO	108

5.3	Radicals for Redox Flow Batteries	109
5.3.1	Functionalization for Radicals	110
5.3.2	Ionization for Radicals	114
5.3.3	Radicals Polymer	119
5.4	Summary and Prospect	122
	Acknowledgments	124
	References	124
6	Organometallic Complexes-Based Electrodes	127
6.1	Introduction	127
6.2	Small Molecules	128
6.2.1	Porphyrin Complex	128
6.2.2	Phthalocyanine Complex	129
6.2.3	Ferrocene	130
6.3	1D MOF	134
6.4	2D MOF	137
6.5	3D MOF	139
6.6	Summary and Outlook	141
	Acknowledgments	142
	References	142
7	Polymer-Based Organic Cathodes	145
7.1	Introduction	145
7.2	Organosulfur Polymers	146
7.2.1	Unsaturated Bond-Derived Organosulfur Polymers	146
7.2.2	-SH-Derived Organosulfur Polymers	154
7.2.3	SPAN	157
7.2.4	Covalent Organosulfur Polymers	163
7.3	Carbonyl-Derived Polymers	167
7.3.1	Polyquinones	168
7.3.2	Polyimides	176
7.3.3	Polyanhydrides	181
7.4	Covalent Organic Frameworks-Derived Polymers	182
7.5	Organic Radical-Derived Polymers	186
7.6	Other Polymers	190
7.6.1	Triphenylamine-Based Polymers	190
7.6.2	Hexaazatrinaphthalene-Based Polymers	191
7.7	Summary and Outlook	193
	Acknowledgments	194
	References	194
8	Organic Anode	199
8.1	Introduction	199
8.2	Conjugated Carboxylates	200
8.2.1	Aromatic Dicarboxylates	200

8.2.1.1	Effect of Metal Cation	201
8.2.1.2	Effect of Conjugated Core	203
8.2.1.3	Effect of Substituent Groups	209
8.2.1.4	Multi Active Sites	210
8.2.2	Aliphatic Dicarboxylates	211
8.3	Schiff Bases	213
8.4	Azo Compounds	217
8.5	Covalent Organic Frameworks	220
8.6	Thiophene Compounds	222
8.7	Summary and Outlook	223
	Acknowledgments	224
	References	224
9	All-Organic Batteries	229
9.1	Introduction	229
9.2	Traditional Batteries	230
9.2.1	Cell Configuration	230
9.2.2	Proton Batteries	231
9.2.2.1	Two Different Molecules for Anode and Cathode	232
9.2.2.2	Anchoring Type All-Organic Batteries	235
9.2.2.3	Bipolar All-Organic Proton Batteries	235
9.2.2.4	Other Research on All-Organic Proton Batteries	237
9.2.3	All-Organic Batteries Based on Metallic Carriers	238
9.2.3.1	Li-Ion Carrier for All-Organic Batteries	239
9.2.3.2	Na/K Ions Carrier for All-Organic Batteries	248
9.2.4	Metal-Free Carriers for All-Organic Batteries	250
9.3	Flow Batteries Based on Organic Molecules	254
9.3.1	Cell Configuration	255
9.3.2	Comparison of AORFBs and NORFBs	256
9.3.3	Principle of Molecular Engineering for ORFBs	256
9.3.4	Aqueous all-Organic Redox Flow Batteries	257
9.3.5	Nonaqueous all-Organic Redox Flow Batteries	260
9.4	Summary and Outlook	264
	Acknowledgments	265
	References	265
10	Outlook	269
	Acknowledgments	271
	List of Abbreviations	273
	Index	285
