

Contents

	Preface	<i>ix</i>
1	Introduction	<i>1</i>
1.1	Outline on Wave-Transparent Composites	<i>1</i>
1.2	Composition of Polymer Matrix Wave-Transparent Composites	<i>2</i>
1.2.1	Polymer Matrix	<i>3</i>
1.2.2	Reinforced Fibers	<i>4</i>
1.3	Factors Influencing the Wave-Transparent Performances of Polymer Matrix Wave-Transparent Composites	<i>7</i>
1.4	Property Requirements for Polymer Matrix Wave-Transparent Composites	<i>8</i>
1.4.1	Wave-Transparent Performances	<i>8</i>
1.4.2	Mechanical Properties	<i>9</i>
1.4.3	Heat Resistant Properties	<i>9</i>
1.4.4	Environmental Resistance Properties	<i>9</i>
	References	<i>9</i>
2	Wave-Transparent Mechanism, Test Methods for Dielectric Properties and Wave-Transparent Models of Wave-Transparent Materials	<i>21</i>
2.1	Wave-Transparent Mechanism of Wave-Transparent Materials	<i>21</i>
2.2	Dielectric Parameter Equations for Wave-Transparent Materials	<i>23</i>
2.2.1	Clausius–Mossotti Equation	<i>23</i>
2.2.1.1	Electron Polarization	<i>23</i>
2.2.1.2	Atomic Polarization	<i>24</i>
2.2.1.3	Ion Polarization	<i>24</i>
2.2.1.4	Orientated Polarization	<i>25</i>
2.2.1.5	Interfacial Polarization	<i>25</i>
2.2.2	Maxwell–Garnett Equation	<i>26</i>
2.2.3	Lichtenecker Equation	<i>27</i>
2.3	Test Methods for Dielectric Properties of Wave-Transparent Materials	<i>28</i>
2.3.1	Resonance Method	<i>28</i>
2.3.1.1	Perturbation Method	<i>28</i>
2.3.1.2	High Q Cavity Method	<i>29</i>
2.3.1.3	Quasi-Optical Cavity Method	<i>31</i>
2.3.2	Nonresonant Method	<i>33</i>
2.3.2.1	Transmission Line Method	<i>33</i>
2.3.2.2	Free-Space Method	<i>34</i>
2.4	Wave-Transparent Model of Wave-Transparent Materials	<i>36</i>
2.4.1	Single-Layer Wave-Transparent Model	<i>36</i>
2.4.2	Two-Layer Wave-Transparent Model	<i>38</i>
2.5	Summary	<i>43</i>
	References	<i>43</i>

3	Polymer Matrix	51
3.1	Introduction	51
3.2	Common Polymer Matrix	51
3.2.1	Epoxy Resins	51
3.2.2	Phenolic (PF) Resins	54
3.2.3	Bismaleimide (BMI) Resins	58
3.2.3.1	Modified BMI Resins by Diamine Chain Extension	58
3.2.3.2	Modified BMI Resins by Allyl Compounds	59
3.2.3.3	Modified BMI Resins by Rubber Elastomers	59
3.2.3.4	Modified BMI Resins by Thermoplastic Resins	59
3.2.3.5	Modified BMI Resins by Thermoset Resins	60
3.2.3.6	Modified BMI Resins by Flexible Long-Chain Segments	60
3.2.3.7	Other Modification Methods	60
3.2.4	Silicone Resins	61
3.2.5	Polytetrafluoroethylene (PTFE) Resin	63
3.2.6	Unsaturated Polyester (UP) Resins	64
3.2.7	Cyanate Ester (CE) Resins	67
3.3	Design and Preparation of Polymer Matrix with Low Dielectric Constant	72
3.3.1	Epoxy Resins	73
3.3.1.1	Structural Modification of Epoxy Resins with Low ϵ	73
3.3.1.2	Curing Agent with Low ϵ for Epoxy Resins	73
3.3.1.3	Epoxy Composites with the Addition of Low ϵ Compounds, Fillers, or Fibers	73
3.3.2	Phenolic Resins	78
3.3.3	Bismaleimide Resins	78
3.3.4	Silicone Resins	79
3.3.5	Polytetrafluoroethylene Resins	81
3.3.6	Unsaturated Polyester Resins	81
3.3.7	Cyanate Resins	81
3.3.7.1	CE Composites Blending with the Addition of Low ϵ Fillers	82
3.3.7.2	Structural Modification of CE Resins with Low ϵ	83
3.4	Summary	86
	References	86
4	Reinforced Fibers	107
4.1	Inorganic Fibers	107
4.1.1	Glass Fibers	107
4.1.1.1	Types of Glass Fibers	107
4.1.1.2	Classification by Raw Material Composition	107
4.1.1.3	Classification by Usage Characteristics	108
4.1.1.4	Preparation of Glass Fibers	110
4.1.1.5	Structure of Glass Fibers	112
4.1.1.6	Properties of Glass Fibers	113
4.1.2	Quartz Fibers	114
4.1.2.1	Development History and Types of Quartz Fibers	115
4.1.2.2	Preparation of Quartz Fibers	117
4.1.2.3	Structure of Quartz Fibers	118
4.1.2.4	Properties of Quartz Fibers	120
4.2	Organic Fibers	120
4.2.1	Aramid Fibers	120
4.2.1.1	Types of Aramid Fibers	121
4.2.1.2	Preparation of Aramid Fibers	123
4.2.1.3	Structure of Aramid Fibers	125
4.2.1.4	Properties of Aramid Fibers	127

4.2.2	Ultrahigh Molecular Weight Polyethylene Fibers	128
4.2.2.1	Synthesis of UHMWPE	129
4.2.2.2	Preparation of UHMWPE Fibers	131
4.2.2.3	Structure of UHMWPE Fibers	134
4.2.2.4	Properties of UHMWPE Fibers	135
4.2.3	Poly- <i>p</i> -Phenylene Benzobisoxazole Fibers	136
4.2.3.1	Synthesis of PBO Monomer and PBO Polymers	137
4.2.3.2	Preparation of PBO Fibers	139
4.2.3.3	Structures of PBO Fibers	140
4.2.3.4	Properties of PBO Fibers	141
4.3	Summary	142
	References	142
5	Interfaces of Polymer Matrix Wave-Transparent Composites	155
5.1	Basic Concept of Interfaces	155
5.2	Formation of Interfaces	156
5.3	Interfacial Interaction Mechanism of the Polymer Matrix Wave-Transparent Composites	157
5.3.1	Mechanical Bonding Theory	157
5.3.2	Adsorption Theory	157
5.3.3	Diffusion Theory	157
5.3.4	Acid-Base Interaction Theory	158
5.3.5	Chemical Bonding Theory	158
5.4	Characterization of Interfacial Performances	158
5.4.1	Characterization of Chemical Performances of Interfaces	160
5.4.1.1	Elemental Composition and Functional Groups on the Surface of the Reinforced Fibers	160
5.4.2	Surface Free Energy of the Reinforced Fibers	161
5.4.3	Characterization of Physical Performances of Interfaces	164
5.4.3.1	Surface Morphology and Roughness of the Reinforced Fibers	164
5.4.3.2	Interface Layer of the Polymer Matrix Wave-Transparent Composites	168
5.4.4	Characterization of Interfacial Bonding Strength	169
5.4.4.1	Single Fiber Fracture Test	169
5.4.4.2	Single Fiber Pull-Out Test	170
5.4.4.3	Fiber Indentation/Ejection Test	172
5.4.4.4	Nano-Indentation Method	173
5.5	Improvement of Interfacial Compatibility for Reinforced Fibers/Polymer Matrix	177
5.5.1	Surface Functionalization of the Reinforced Fibers	177
5.5.1.1	Physical Modification	177
5.5.1.2	Chemical Modification	184
5.5.2	Interfacial Compatibilizers	198
5.5.2.1	Definition of the Interfacial Compatibilizer	198
5.5.2.2	Classification and Action Mechanism of the Interfacial Compatibilizers	198
5.5.2.3	Design and Synthesis of Interface Compatibilizers	199
5.6	Summary	208
	References	208
6	The Molding Technologies of Polymer Matrix Wave-Transparent Composites	235
6.1	Structural Design of Polymer Matrix Wave-Transparent Composites	235
6.1.1	Structural Design Condition of the Polymer Matrix Wave-Transparent Composites	235
6.1.1.1	Requirements of Structural Properties	236

6.1.1.2	Load Condition	236
6.1.1.3	Environmental Condition	237
6.1.1.4	Reliability and Economy of the Products	238
6.1.2	Materials Design	238
6.1.2.1	Selection of Raw Materials	238
6.1.2.2	Determination of the Performances for Single Layer	239
6.1.2.3	Laminates Design	240
6.1.3	Structural Design	241
6.1.3.1	Structural Design Principles	242
6.1.3.2	Technological Requirements	242
6.1.3.3	External Factor	242
6.2	Molding Process of the Polymer Matrix Wave-Transparent Composites	243
6.2.1	Shaping	243
6.2.2	Impregnating	243
6.2.3	Curing	243
6.2.4	Hand Paste Molding	244
6.2.4.1	Types of Hand Paste Molding	245
6.2.4.2	Raw Materials of Hand Paste Molding	247
6.2.4.3	Release Agents of the Hand Paste Molding	247
6.2.4.4	Features of the Hand Paste Molding	248
6.2.5	Bag Molding	248
6.2.5.1	Vacuum Bag Molding	248
6.2.5.2	Pressure Bag Molding	250
6.2.5.3	Vacuum Bag-Autoclave Molding	250
6.2.6	Laminated Molding	251
6.2.6.1	Laminated Molding Process	251
6.2.6.2	Common Defects and Solutions of the Laminated Molding	253
6.2.7	RTM	255
6.2.7.1	Process Flow of RTM	255
6.2.7.2	Structures of RTM Machine	257
6.2.7.3	Characteristics of RTM	258
6.2.8	Filament Winding	258
6.2.8.1	Classification of Filament Winding	258
6.2.8.2	Winding Rules	259
6.2.8.3	Winding Process	261
6.2.8.4	Characteristics of the Filament Winding	263
6.3	Summary	264
	References	265

7 Application of the Polymer Matrix Wave-Transparent Composites 277

7.1	Aircraft Radomes	277
7.2	Radomes of Airborne, Shipborne, Ground, and Vehicle	278
7.2.1	Airborne Radomes	278
7.2.2	Shipboard Radomes	279
7.2.3	Ground Radomes	280
7.2.4	Vehicle-Mounted Radomes	281
7.3	5G Communication Radomes	282
7.4	Printed Circuit Board	283
7.5	Summary	284
	References	285
