

Index

Note: Page numbers in *italics* and **bold** refers to figures and tables respectively.

a

acetic acid (AA) 252, 283
acid-catalyzed reactions, zeolite catalysts
 deactivation in 88–113
acid density 488
acidic zeolites 321
 ethanol to hydrocarbons over 186,
 187, **187**
acid strength 488–489
acid type 489–490, 490
aldehydes 102, 252
 production mediated by
 hydroformylation 260–264,
 261–263
alkali metal additives 326–327
alkaline leaching 57
alkenes 319–320
alkylation 216, 301
aluminum (Al) 321
 distribution 490–493, 491, 493
amines 384
3-aminopropyltrimethoxysilane
 (APTES) 69
ammonium pool effect (APE)
 process 20
amorphous silica 27–28
Anderson–Schulz–Flory (ASF)
 model 212, 212
aromatics 299, 451–453
 heterogeneous CO₂ hydrogenation to
 aromatics 301, 302–314
 zeolite catalysis in aromatics
 production 301–302

aromatization 216
associative mechanism for catalytic
 dehydration of methanol 177–178
atom probe tomography (APT) 94
A-type zeolites 363

b

base additives 384
benzene, toluene, and xylene (BTX) 69,
299
 aromatics and common
 derivatives 300
bicarbonates 384
bifunctional catalysts 5, 252, 375
bifunctional catalytic membrane
 reactor 259
bifunctional reaction mechanism 193
bimetallic Ni–Co/ZSM-5 402–403
bimetallic Pt–Cu catalysts 278
biomass-to-liquid (BTL) 211
“bottom-up” method 48
bottom-up synthetic methods 24
 ligand-protected methods 24–26, 26
 organosilane-protected
 methods 26–27
 precursor-stabilization
 methods 27–28
Brønsted acid sites (BASs) 175, 195, 253,
272, 439, 445–446, 473, 513
Brønsted to Lewis (B/L) acid sites 439
1,3-butadiene, ethanol conversion
 to 187–188, 188
butene 319–320

 - copper-based catalysts 285
 - Cu-based metal oxide/zeolite bifunctional catalysts 336–337
- co-reactant feeding effects 434–436, 435
- core-shell bifunctional catalyst 381
- core-shell-structured catalysts 229–235, 230–235
- coupled methanol hydrocarbon cracking (CMHC) 434

C₂ oxygenates mediated
 by carbonylation 253–256, 254,
 255, 256
 cracking 195, 216
 cross-polarization (CP) 90
 Cu-MOR catalysts 277–278
 carbonylation of DME over **278**

d

deactivation
 in carbonylation of MN to dimethyl
 carbonate 125, 125
 controlling reaction
 conditions 105–107
 in dry reforming of methane
 121–122
 mechanisms 479–481
 mitigation of 103–107
 mode 480
 multicomponent coupling
 reactions 107
 in propane dehydrogenation to
 propene 114–115
 zeolite catalyst design and
 modification 103–105, 104
 deactivation-resistant strategies
 in carbonylation of MN to dimethyl
 carbonate 125–127, 126
 in dry reforming of methane 122–123,
 123
 in propane dehydrogenation to
 propene 115–120, 116, 118
 defect-free membrane 365
 dehydrogenation 195, 513–527
 of formic acid 33
 of light alkanes 33–36, 35
 dehydration of methanol 177–178, 177
 delamination 58–59, 59
 demetallization method 56–58, 56
 density functional theory (DFT) 148,
 227, 273, 360, 405, 474, 519
 1,1-diethoxyethane (DEE) 287
 diethyl carbonate (DEC) 287
 dimethoxymethane (DMM) 436
 dimethyl carbonate (DMC) 124, 285
 carbonylation of MN
 to 124–127, 124
 dimethyl ether (DME) 177, 272, 329,
 359, 428
 carbonylation reaction 252,
 272–283

catalytic performance of zeolite-based
 catalysts **376–377**
 CO₂ hydrogenation to 373–383
 FER catalysts 281–283, **283**
 integrated bifunctional
 catalysts 379–382, 381
 MOR catalysts 273–281
 physically mixed catalysts 378–379
 production mediated by
 dehydration 257–259, 257–260
 zeolite catalysts 272–273
 zeolite catalytic membrane
 reactor 382–383, 382
 dimethyl ether-to-gasoline (DTG) 431
 dimethyl ether-to-hydrocarbon
 (DTH) 428
 dimethyl sulfate 285
 direct C–C bond coupling
 mechanism 178–181, 179–181
 direct conversion of methane to
 oxygenates 404, 405
 acetic acid over zeolite-based
 catalysts 410–413, 412, 413
 C₁ oxygenates over zeolite-based
 catalysts 406–410
 direct dehydrogenation of ethane
 (EDH) 519
 direct dehydrogenation of light
 alkanes 513–521, 516, 517, 520
 direct internal reforming-molten
 carbonate fuel cell
 (DIR-MCFC) 402
 direct mechanism 472–473
 direct methane conversion to
 chemicals 401–416
 direct non-oxidative methane conversion
 (DNMC) 302
 dissociative mechanism for catalytic
 dehydration of methanol 177–178
 distributed feeding 236
 double-bed-layer filled catalysts 375,
 378
 double-shelled hollow spheres
 (DSHSs) 234
 dry gel conversion (DGC) 22
 dry reforming of methane (DRM) 120,
 161–165, 402–403, 403, 404
 deactivation mechanism 121–122
 deactivation-resistant
 strategies 122–123, 123
 regeneration strategy 123–124

dual-cycle mechanism 472, 477–478, 477
 dual-engine-driven (DED) catalytic system 228, 229
 dynamic nuclear polarization
 surface-enhanced NMR spectroscopy (DNP SENS) 490

e

Electron Energy Loss spectroscopy (EELS) 90, 92
 electron paramagnetic resonance (EPR) 533
 enolate 212
 ethanol 252, 359
 carbonylation reaction 286–287
 catalytic performance of zeolite-based catalysts 371
 CO₂ hydrogenation 367–373, 372
 conversion over zeolites 185
 conversion to 1,3-butadiene over metal-modified zeolite 187–188, 188
 fundamental properties 369
 to hydrocarbons over acidic zeolite 186, 187, 187
 oxidative carbonylation reaction 287
 reaction mechanism 373
 synthesis strategy 256
 ethanol-intermediate route, light olefins distribution regulation 339, 340
 ethanol to hydrocarbons (ETH) 186
 over acidic zeolite 186, 187, 187
 ethene 319
 ethylene 413
 ethylenediamine (en) 388
 ethylenediaminetetraacetic sodium (EDTA) 26
 ethylene oxide (EO) 319–320
 extra-framework Al (EFAl) 475
 ExxonMobil 63

f

FER catalysts 281–283
 carbonylation of DME 283
 first C–C bond formation 99–101, 99–100, 451–453, 453, 473–476, 473
 Fischer–Tropsch synthesis (FTS) 28, 61–62, 62, 211, 251, 320
 catalysts 213–214
 reaction mechanism
 hypothesis 212–213, 213

 reactors for FTS 215–216, 215
 route for light olefins
 formation 322–327
 fixed-bed reactor 215
 fluid catalytic cracking (FCC) 511
 fluidized bed reactor (FBR) 215, 215
 fluidized bed SMTO technology 431
 formaldehyde 102
 formic acid 359
 CO₂ hydrogenation 383–388, 388
 dehydrogenation 33
 formic acid/CO₂-mediated chemical hydrogen delivery/storage 387
 free energy profile 386
 fossil fuels 359
 Fourier transform infrared spectroscopy (FTIR) 147

g

gallium (Ga)-based catalysts 335
 gallium nitride (GaN) 335
 gaseous methanol carbonylation 253
 granule-mixed catalysts 375, 378
 “green H₂” 359

h
