

Contents

Preface xv

Part I Introduction 1

- 1 **Challenges and Opportunities for Zeolites in the Conversion of Low-carbon Molecules** 3
Zaiku Xie, Chuanming Wang, Jing Shi
 - 1.1 Introduction 3
 - 1.2 Challenges in the Synthesis of Zeolites 3
 - 1.3 Challenges in Zeolite-catalyzed Low-carbon Hydrocarbon Conversions 4
 - 1.4 Challenges in the Construction and Characterization of Active Sites in Zeolites 6
 - 1.5 Opportunities and Outlook 6
 - References 7

Part II Structures and Properties of Zeolites 9

- 2 **Synthesis of Zeolite-encapsulated Metal Catalysts for Catalytic Conversion of Low-carbon Molecules** 11
Kai Zhang, Chengxu Li, Qiming Sun, Jihong Yu
 - 2.1 Introduction 11
 - 2.2 Synthetic Methods for Zeolite-encapsulated Metal Catalysts Preparation 12
 - 2.2.1 Top-down Synthetic Methods 12
 - 2.2.1.1 Impregnation Methods 12
 - 2.2.1.2 Ion-exchange Methods 19
 - 2.2.1.3 Interzeolite Transformation Methods 20
 - 2.2.1.4 Other Methods 22

2.2.2	Bottom-up Synthetic Methods	24
2.2.2.1	Ligand-protected Methods	24
2.2.2.2	Organosilane-protected Methods	26
2.2.2.3	Precursor-stabilization Methods	27
2.3	Catalytic Conversion of Low-carbon Molecules	28
2.3.1	CO/CO ₂ Hydrogenation	28
2.3.2	Catalytic Conversion of Methane	31
2.3.3	Dehydrogenation of Formic Acid	33
2.3.4	Dehydrogenation of Light Alkanes	33
2.3.5	Selective Hydrogenation of Unsaturated Hydrocarbons	36
2.4	Conclusion and Perspectives	37
	Acknowledgments	38
	References	38
3	Synthesis of Hierarchical Zeolites for Catalytic Conversion of Low-carbon Molecules	45
	<i>Chengyi Dai, Yetong Li, Chunshan Song</i>	
3.1	Introduction	45
3.2	Synthesis Methods	48
3.2.1	Template Methods	48
3.2.1.1	Hard Template Method	48
3.2.1.2	Soft Template Method	53
3.2.2	Post-processing Methods	55
3.2.2.1	Demetallization	56
3.2.2.2	Delamination	58
3.2.2.3	Recrystallization	59
3.3	Application of Hierarchical Zeolites in Low-carbon Catalytic Conversion	61
3.3.1	Fischer–Tropsch Synthesis	61
3.3.2	Methanol Conversion	63
3.3.2.1	Methanol-to-gasoline Hydrocarbons	63
3.3.2.2	Methanol to Olefins	64
3.3.2.3	Methanol to Propylene	68
3.3.2.4	Methanol to Aromatics	69
3.3.2.5	Methanol Dehydration to Dimethyl Ether	71
3.4	Conclusion and Future Prospects	72
	References	72
4	Deactivation and Regeneration of Zeolites in Catalytic Conversion of Low-carbon Molecules	87
	<i>Zaizhe Cheng, Ying Li, Shouying Huang, Meiyang Wang, Xinbin Ma</i>	
4.1	Introduction	87
4.2	Deactivation of Zeolite Catalysts in Acid-catalyzed Reactions	88
4.2.1	Characterization of Coke on Deactivated Zeolites	88

4.2.1.1	Characterization Techniques of Coke Structure	88
4.2.1.2	The Characterization of Coke Location	91
4.2.2	Structure–Deactivation Relationship	95
4.2.2.1	Acidic Properties	96
4.2.2.2	Textural Structure	96
4.2.3	The Coke Formation Mechanism	98
4.2.3.1	Formation of First C—C Bond	99
4.2.3.2	Formation of MAHs	101
4.2.3.3	Formation of PAHs	102
4.2.4	Mitigation of Deactivation	103
4.2.4.1	The Zeolite Catalyst Design and Modification	103
4.2.4.2	Controlling Reaction Conditions	105
4.2.4.3	Multicomponent Coupling Reactions	107
4.2.5	Regeneration of Deactivated Zeolites	107
4.2.5.1	Oxidation	107
4.2.5.2	Steam Gasification	109
4.2.5.3	Hydrogen Treatment	110
4.2.6	Conclusion	112
4.3	Deactivation of Metal–Zeolite Catalysts: Metal-catalyzed and Bifunctional Systems	113
4.3.1	Propane Dehydrogenation to Propene	113
4.3.1.1	Deactivation Mechanisms	114
4.3.1.2	Deactivation-resistant Strategies	115
4.3.1.3	Catalyst Regeneration	120
4.3.2	Dry Reforming of Methane	120
4.3.2.1	Deactivation Mechanism	121
4.3.2.2	Deactivation-resistant Strategies	122
4.3.2.3	Regeneration Strategy	123
4.3.3	Carbonylation of MN to Dimethyl Carbonate	124
4.3.3.1	Deactivation Mechanism	125
4.3.3.2	Deactivation-resistant Strategies and Regeneration	125
4.3.4	Conclusion	127
4.4	Perspectives	127
	References	127
5	Conversion of Low-carbon Molecules over Zeolites	143
	<i>Jiale Xiao, Wei Fang, Chengtao Wang, Liang Wang, Fengshou Xiao</i>	
5.1	Introduction	143
5.2	Low Temperature Oxidation of Methane to Methanol	143
5.3	Syngas Conversion	147
5.3.1	Syngas to Ethanol	147
5.3.2	Syngas to Olefin	153
5.4	CO ₂ Conversion	156
5.4.1	Reverse Water–Gas Shift Reaction	156

- 5.4.2 Dry Reforming of Methane and CO₂ 159
- 5.5 Conclusion and Outlook 163
- References 164

6 Zeolites for Low-carbon Hydrocarbon Conversion: Mechanistic Insights 173

Chao Wang, Min Hu, Feng Deng, Jun Xu

- 6.1 Introduction 173
- 6.2 Conversion of Low-carbon Alcohols over Zeolites 174
 - 6.2.1 Methanol-to-hydrocarbons Reaction 174
 - 6.2.1.1 Dehydration of Methanol 175
 - 6.2.1.2 Direct C—C Bond Coupling Mechanism 176
 - 6.2.1.3 Hydrocarbon Pool Mechanism 180
 - 6.2.2 Ethanol Conversion over Zeolites 183
 - 6.2.2.1 Ethanol to Hydrocarbons over Acidic Zeolite 184
 - 6.2.2.2 Ethanol Conversion to 1,3-Butadiene over Metal-modified Zeolite 185
- 6.3 Transformation of Low-carbon Alkanes over Zeolites 187
 - 6.3.1 Conversion of Methane over Metal-modified Zeolites 187
 - 6.3.1.1 Partial Oxidation of Methane 188
 - 6.3.1.2 Non-oxidative Methane Dehydroaromatization 190
 - 6.3.2 Transformation of C₂–C₄ Alkanes over Zeolites 193
- 6.4 Conclusion 196
- References 197

Part III CO Conversion 209

7 Application of Zeolite in Fischer–Tropsch Synthesis 211

Yingluo He, Guangbo Liu, Guohui Yang, Noritatsu Tsubaki

- 7.1 What Is Fischer–Tropsch Synthesis? 211
 - 7.1.1 Introduction 211
 - 7.1.2 Reaction Mechanism Hypothesis 212
 - 7.1.3 Catalysts for FTS 213
 - 7.1.4 Reactors for FTS 215
- 7.2 Zeolite-based FTS Catalysts 216
 - 7.2.1 Unique Properties of Zeolites for FTS 216
 - 7.2.2 Zeolite-supported Catalysts 217
 - 7.2.3 Zeolite-mixed Catalysts 222
 - 7.2.4 Core–Shell-structured Catalysts 229
- 7.3 Zeolite-based Membrane Reactors 236
- 7.4 Conclusion and Outlook 238
- References 239

8 Application of Zeolites in Syngas to Oxygenated Hydrocarbons Synthesis 249

Suhan Liu, Yubing Li, Kang Cheng, Jincan Kang, Ye Wang

- 8.1 Introduction 249
- 8.2 Production of C₂ Oxygenates Mediated by Carbonylation 251
- 8.3 Production of DME Mediated by Dehydration 255
- 8.4 Production of Aldehydes Mediated by Hydroformylation 258
- 8.5 Conclusion and Outlook 262
- Acknowledgments 263
- References 263

9 Application of Zeolite in Carbonylation 269

Wei Luo, Kaijie Han, Song Song, Tong Ding, Ye Tian, Xingang Li

- 9.1 Introduction 269
- 9.2 DME Carbonylation Reaction 270
 - 9.2.1 Zeolite Catalysts 270
 - 9.2.2 MOR Catalysts 271
 - 9.2.2.1 H-MOR Catalysts 271
 - 9.2.2.2 Cu-MOR Catalysts 275
 - 9.2.2.3 Other Metal-modified H-MOR Catalysts 276
 - 9.2.2.4 Stability of HMOR 277
 - 9.2.3 FER Catalysts 279
- 9.3 Methanol Carbonylation Reaction 281
- 9.4 Methanol Oxidative Carbonylation Reaction 283
- 9.5 Ethanol Carbonylation Reaction 284
- 9.6 Ethanol Oxidative Carbonylation Reaction 285
- 9.7 Methane Oxidative Carbonylation Reaction 286
- 9.8 Conclusion and Future Outlook 286
- References 287

Part IV CO₂ Conversion 295

10 Application of Zeolites in CO₂ to Aromatics 297

Cederick Cyril Amoo, Jian Sun

- 10.1 Introduction 297
- 10.2 Zeolite Catalysis in Aromatics Production 299
- 10.3 Heterogeneous CO₂ Hydrogenation to Aromatics 300
 - 10.3.1 CO₂-MTA Route 301
 - 10.3.1.1 Effects of Proximity 301
 - 10.3.1.2 Effects of Physical Properties 303
 - 10.3.1.3 Effects of Chemical Properties 303

10.3.1.4	Reaction Mechanism over CO ₂ -MTA	305
10.3.2	CO ₂ -FTS Route	305
10.3.2.1	Effects of Proximity	306
10.3.2.2	Effects of Physical Properties	308
10.3.2.3	Effects of Chemical Properties	308
10.3.2.4	Reaction Mechanism over CO ₂ -FTS	309
10.3.3	Hydrothermal Conversion	310
10.3.4	Influence of Zeolite Characteristics	311
10.4	Conclusions and Outlook	312
	References	313
11	CO₂ Hydrogenation to Alkenes over Zeolite-based Catalysts	317
	<i>Sen Wang, Qian Zhang, Shiyang Li, Mei Dong, Jianguo Wang, Weibin Fan</i>	
11.1	Introduction	317
11.2	The FT Synthesis Route for Light Olefins Formation from CO ₂ Hydrogenation	320
11.2.1	Fe-based Oxide/Zeolite Bifunctional Catalysts	320
11.2.2	Co-based Bifunctional Catalyst	324
11.3	Methanol-Intermediate Route for Light Olefins Formation from CO ₂ Hydrogenation	325
11.3.1	Zn-based Oxides/Zeolite Bifunctional Catalysts	326
11.3.2	In-based Metal Oxide/Zeolite Bifunctional Catalysts	329
11.3.3	Ga-based Metal Oxide/Zeolite Bifunctional Catalysts	333
11.3.4	Cu-based Metal Oxide/Zeolite Bifunctional Catalysts	334
11.4	Control of the Product Distributions in CO ₂ Hydrogenation to Light Olefins	335
11.4.1	Regulation of Light Olefins Distribution via Ethanol-Intermediate Route	337
11.4.2	Regulation of Light Olefins Distribution via Controlling the Pore Structure and Acidic Properties of Zeolite	338
11.5	Conclusion and Outlook	340
	Acknowledgments	342
	Competing Interests	342
	References	342
12	Application of Zeolites in CO₂ to Oxygenates	355
	<i>Limin Zhang, Miao Zhang, Wenhui Li, Guanghui Zhang, Chunshan Song, Xinwen Guo</i>	
12.1	Introduction	355
12.2	CO ₂ Hydrogenation to Methanol	356
12.2.1	The Function of Separating Water	359
12.2.2	The Function of Confining and Stabilizing Metal Species	361
12.3	CO ₂ Hydrogenation to Ethanol	363
12.4	CO ₂ Hydrogenation to DME	369

- 12.4.1 Physically Mixed Catalysts 374
- 12.4.2 Integrated Bifunctional Catalysts 375
- 12.4.3 Zeolite Catalytic Membrane Reactor 378
- 12.5 CO₂ Hydrogenation to Formic Acid 379
- 12.6 Conclusion and Outlook 385
- Acknowledgments 385
- References 386

Part V Methane Conversion 393

- 13 Application of Zeolites in Methane to Value-added Chemicals 395**
Jin Liu, Bo Wu, Liangshu Zhong
- 13.1 Introduction 395
- 13.2 Direct Methane Conversion to Chemicals 397
 - 13.2.1 Methane Conversion to Syngas 397
 - 13.2.2 Steam Reforming of Methane 397
 - 13.2.3 Dry Reforming of Methane 398
 - 13.2.4 Direct Conversion of Methane to Oxygenates 400
 - 13.2.4.1 Direct Conversion of Methane to C₁ Oxygenates over Zeolite-based Catalysts 402
 - 13.2.4.2 Direct Conversion of Methane to Acetic Acid over Zeolite-based Catalysts 406
 - 13.2.5 OCM to C₂₊ Hydrocarbons 409
 - 13.2.6 Non-oxidative Conversion of Methane to C₂₊ Hydrocarbons 411
- 13.3 Summary and Prospects 412
- References 414

Part VI Methanol Conversion 423

- 14 Application of Zeolites in Methanol/Dimethyl Ether to Fuels 425**
Faisal Zafar, Mansoor Ali, Jong Wook Bae
- 14.1 Introduction 425
- 14.2 Zeolites for Methanol/DME Conversion to Fuels 427
- 14.3 Effects of Reaction Variables for Methanol/DME Conversions 430
 - 14.3.1 Effects of Reaction Temperature and Pressure 430
 - 14.3.2 Effects of Space Velocity 432
 - 14.3.3 Effects of Co-reactant Feeding for Product Distributions 432
- 14.4 Effects of Zeolite Morphology and Pore Size Distribution 434
- 14.5 Effects of Zeolite Topology and Pore Size Distribution 437
- 14.6 Effects of Si/Al Ratio and Al Distribution in Zeolite Frameworks 439
- 14.7 Effects of B/L and External/Internal Acidic Sites on the Zeolites 443
- 14.8 Effects of Metal Modifications to Catalytic Activity and Stability 446
