Preface *ix*

Acknowledgments *xi*

1 Overview *1*

- 1.1 Introduction to Mg-based Hydrogen and Electric Energy Storage Materials *1*
- 1.2 Overview of Mg-based Hydrogen Storage Materials and Systems *2*
- 1.3 Overview of Mg-ion Batteries *5*

2 Hydrogen Absorption/Desorption in Mg-based Materials and Their Applications *9*

- 2.1 The Characterizations of Mg-based Hydrogen Storage Materials *9*
 - 2.1.1 An Introduction to the Crystal Structure of Mg and MgH₂ *9*
 - 2.1.2 Thermodynamic Mechanisms for the Hydrogen Absorption/Desorption of Mg/MgH₂ *9*
 - 2.1.3 Kinetic Mechanisms for the Hydrogen Absorption/Desorption of Mg/MgH₂ *10*
- 2.2 Methods for Improving the Hydrogen Storage Performance of Mg-based Materials *14*
 - 2.2.1 Alloying *14*
 - 2.2.2 Catalyzing *18*
 - 2.2.3 Nano-structuring *21*
 - 2.2.4 Combining with Complex Hydrides *28*
 - 2.2.4.1 Combining with Metal Amides *28*
 - 2.2.4.2 Combining with Metal Boronhydrides or Alanates *30*
- 2.3 Synthesis Technologies for Mg-based Hydrogen Storage Materials *33*
 - 2.3.1 Preparation Methods of Mg-based Alloys *33*
 - 2.3.1.1 Melting-based Methods *35*
 - 2.3.1.2 Hydrogen Combustion Synthesis (HCS) *35*
 - 2.3.1.3 Mechanical Alloying, Compactions and Severe Plastic Deformation (SPD) Methods *37*
 - 2.3.1.4 Hydriding Chemical Vapor Deposition (HCVD) *39*

2.3.2	Synthesis of Mg-based Materials with Special Structure and Morphology	41
2.3.2.1	Synthesis of Core–Shell Structured Mg-based Materials	41
2.3.2.2	Synthesis of Nanostructured Mg-based Materials	44
2.3.2.3	Synthesis of Amorphous Mg-based Materials	46
2.4	Advanced Characterization Techniques	46
2.4.1	Synchrotron Radiation	46
2.4.2	In-situ TEM	47
2.4.3	Neutron Diffraction	48
2.4.4	Theoretical Simulations	50
2.5	Fundamentals and Applications of Mg-based Hydrogen Storage Tanks	52
2.5.1	An Introduction to Mg-based Hydrogen Storage Tanks	52
2.5.2	Numerical Modeling	54
2.5.2.1	Heat Transfer Equations	54
2.5.2.2	Mass Transfer Equations	55
2.5.3	Thermal Enhancement Methods	57
2.5.3.1	Powder Compaction	57
2.5.3.2	Metal Skeleton	58
2.5.3.3	Heat Transfer Pipe	58
2.5.3.4	Phase Change Material (PCM)	58
2.5.3.5	Thermochemical Material (TCM)	59
2.5.4	Practical Applications	59
3	Hydrolysis of Mg-based Hydrogen Storage Materials	61
3.1	Hydrolysis Processes of Mg/MgH ₂	62
3.2	Control of Hydrolysis Processes	63
3.2.1	Modification of Reaction Mediate	63
3.2.1.1	Modifying pH Value	63
3.2.1.2	Effects from Other Cations and Anions	66
3.2.2	Adding Catalytic Additives	69
3.2.2.1	Metal Halides	69
3.2.2.2	Metal Oxides, Sulfides and Hydrides	72
3.2.2.3	Carbon Additives	73
3.2.3	Introduction of MgH ₂ based Nanostructures	73
3.2.4	Controlling Hydrolysis Process by Alloying	74
3.2.4.1	Alloying with Active Metals	74
3.2.4.2	Alloying with Metals with Higher Corrosion Potential	75
3.2.4.3	Alloying with Si	77
3.3	Controllable Hydrolysis Systems	77
4	Electrolytes for Mg Batteries	81
4.1	Liquid Electrolytes	81
4.1.1	Aqueous Liquid Electrolytes	81

4.1.1.1	Alkaline Solutions	82
4.1.1.2	Neutral Saline Solutions	82
4.1.1.3	Seawater and Seawater/Acid Mixed Solutions	83
4.1.2	Organic Liquid Electrolytes	84
4.1.2.1	Grignard-based Electrolytes	84
4.1.2.2	HMDS-based Electrolytes	86
4.1.2.3	MgCl ₂ -AlCl ₃ (MACC) Based Electrolytes	86
4.1.2.4	Mg(TFSI) ₂ -based Electrolytes	87
4.1.2.5	Boron-centered Electrolytes	89
4.1.2.6	Other Organic Electrolytes	91
4.2	Solid and Quasi-solid State Electrolytes	93
4.2.1	Solid-state Electrolytes	93
4.2.2	Quasi-solid State Electrolytes	95
5	Cathodes and Anodes for Mg Batteries	97
5.1	Intercalation-type Cathode Materials	97
5.1.1	Chevrel Phase, CP (Mo ₆ T ₈ ; T = S, Se, Te) Cathode Materials	97
5.1.2	V ₂ O ₅ - Mg ²⁺ Insertion-Type Cathode Materials	100
5.1.2.1	Effect of Morphology on V ₂ O ₅	101
5.1.2.2	Effect of Layer Spacing on V ₂ O ₅	102
5.1.3	Molybdenum Oxide (MoO ₃) and Uranium Oxide (α-U ₃ O ₈) - Mg ²⁺ Insertion-type Cathode Materials	105
5.1.3.1	Molybdenum Oxide (MoO ₃) Insertion-type Cathode Materials	105
5.1.3.2	Uranium Oxide (α-U ₃ O ₈) Insertion-type Cathode Materials	106
5.1.4	Layered Structure Cathode Materials	107
5.1.4.1	Layered Oxide Cathode	107
5.1.4.2	Layered Sulfides/Selenide Cathode	108
5.1.4.3	Other Layered Cathode	109
5.1.5	Spinel Structure Cathode Materials	109
5.1.5.1	Spinel Oxide Cathode	109
5.1.5.2	Spinel Sulfide Cathode	110
5.1.6	Olivine Structure Cathode Materials	110
5.1.7	NASICON Structure Cathode Materials	111
5.1.8	Carbon-based Materials	114
5.1.9	MT ₂ (M = Metal, T = S, Se) Type Intercalation Cathode Materials	115
5.2	Conversion-type Cathode Materials	117
5.2.1	Chalcogenides	118
5.2.2	Mg—O ₂ Batteries	120
5.2.3	Mg—S Batteries	122
5.2.4	Mg—Se Batteries	126
5.2.5	Mg—Te Batteries	126
5.2.6	Mg—I ₂ Batteries	126
5.3	Organic Cathodes	127
5.3.1	Carbonyl Compounds	127

5.3.2	Organosulfur Compounds	129
5.3.3	Nitrogen-based Compounds	130
5.4	Anodes for Mg Batteries	132

6	Conclusions and Outlook	137
