**Preface** *xv*

**Foreword** *xvii*

**10 Questions About Exploring Chemical Concepts Through Theory and Computation** *xix*

- 1 Chemical Concepts from Molecular Orbital Theory** *1*  
*Feng Long Gu, Jincheng Yu, and Weitao Yang*
- 1.1 Introduction *1*
  - 1.2 Molecular Orbital Theory *2*
  - 1.3 Canonical Molecular Orbitals *5*
  - 1.4 Frontier Molecular Orbital Theory *5*
  - 1.5 Localized Molecular Orbitals *6*
  - 1.5.1 Orthogonal Localized Molecular Orbitals *7*
  - 1.6 Regularized Nonorthogonal Localized Molecular Orbitals *11*
  - 1.7 Molecular Orbitals *15*
- Acknowledgment *18*  
References *18*
- 2 Chemical Concepts from *Ab Initio* Valence Bond Theory** *23*  
*Chen Zhou, Fuming Ying, and Wei Wu*
- 2.1 Introduction *23*
  - 2.2 *Ab Initio* Valence Bond Theory *24*
  - 2.2.1 Valence Bond Self-Consistent Field Method *24*
  - 2.2.2 Rumer Structures *26*
  - 2.2.3 Orbitals in VB Wave Function *29*
  - 2.2.4 VB Methods Involving Dynamic Correlation *30*
  - 2.3 Chemical Concepts in VB Theory *31*
  - 2.3.1 Resonance Theory *31*
  - 2.3.2 Conjugation, Hyperconjugation, and Aromaticity *32*
  - 2.3.3 Electron-Pair Bonding in Valence Bond Theory *33*
  - 2.3.4 Diabatic States in Valence Bond Theory *34*
  - 2.4 A Brief Guide to Perform VB Calculations *36*
  - 2.4.1 Preparing XMVB Input Files *36*

2.4.2	Reading XMVB Output Files	38
2.5	Concluding Remarks	38
	References	38
<b>3</b>	<b>Chemical Concepts from Conceptual Density Functional Theory</b>	<b>43</b>
	<i>Frank De Proft</i>	
3.1	Introduction	43
3.2	The Fundamentals: Density Functional Theory (DFT) and Kohn–Sham DFT	46
3.3	The First Derivatives: The Electronic Chemical Potential and the Electron Density	48
3.4	The Second Derivatives: Chemical Hardness, Fukui Function, Linear Response Function, and Related Quantities	51
3.4.1	Chemical Hardness and Softness	51
3.4.2	The Fukui Function and the Dual Descriptor	54
3.4.3	Local Softness and Hardness	58
3.4.4	The Linear Response Function, Softness and Hardness Kernels	60
3.5	Perturbational Perspective of Chemical Reactivity	62
3.6	Conclusions	64
	Acknowledgment	64
	References	64
<b>4</b>	<b>Chemical Concepts from Density-Based Approaches in Density Functional Theory</b>	<b>71</b>
	<i>Dongbo Zhao, Xin He, Chunying Rong, and Shubin Liu</i>	
4.1	Introduction	71
4.2	Four Density-Based Frameworks	72
4.2.1	Orbital-Free DFT (OF-DFT)	72
4.2.2	Conceptual DFT (CDFT)	75
4.2.3	Density-Associated Quantities (DAQs)	76
4.2.4	Information-Theoretic Approach (ITA)	77
4.3	Applications of Density-Based Approaches	79
4.3.1	Molecular Isomeric and Conformational Stability	79
4.3.2	Bonding and Noncovalent Interactions	79
4.3.3	Cooperation and Frustration	80
4.3.4	Homochirality and Principle of Chirality Hierarchy	82
4.3.5	Electrophilicity and Nucleophilicity	86
4.3.6	Regioselectivity and Stereoselectivity	86
4.3.7	Brønsted–Lowry Acidity and Basicity	90
4.3.8	Aromaticity and Antiaromaticity	90
4.3.9	Molecular Properties (Frontier Orbitals, HOMO/LUMO Gap, Oxidation States, Polarizability)	91

4.4	Concluding Remarks	94
	Acknowledgments	95
	References	95
<b>5</b>	<b>Chemical Bonding</b>	<b>101</b>
	<i>Sudip Pan and Gernot Frenking</i>	
5.1	Introduction	101
5.2	The Physical Mechanism of the Chemical Bond	103
5.3	Bonding Models	108
5.4	Bond Length and Bond Strength	111
5.5	Dative and Electron-Sharing Bonds	120
5.6	Polar Bonds	124
5.7	Atomic Partial Charges and Atomic Electronegativity	130
5.8	Chemical Bonding in Main-Group Compounds: N <sub>2</sub> , CO, BF, LiF	131
5.9	Chemical Bonding of the Heavier Main-Group Atoms	135
5.10	Chemical Bonding in Transition Metal Complexes: M(CO) <sub>n</sub> (M = Ni, Fe, Cr, Ti, Ca; n = 4 – 8)	143
5.11	Summary	146
	Acknowledgments	147
	References	147
<b>6</b>	<b>Partial Charges</b>	<b>161</b>
	<i>Tian Lu and Qinxue Chen</i>	
6.1	Concept of Partial Charge	161
6.1.1	What is Partial Charge?	161
6.1.2	Theoretical Significances and Practical Applications of Partial Charge	162
6.1.3	Limitations of Partial Charge	163
6.1.4	What Is a Good Method of Calculating Partial Charges?	164
6.1.5	Classification of Partial Charge Calculation Methods	165
6.2	Methods of Calculating Partial Charges	166
6.2.1	Partial Charges Based on Wavefunction	166
6.2.1.1	Mulliken Method	166
6.2.1.2	MMPA Methods	167
6.2.1.3	Löwdin Method	168
6.2.1.4	NPA Method	168
6.2.2	Partial Charges Based on Real Space Partition of Electron Density	169
6.2.2.1	AIM Method	169
6.2.2.2	Voronoi and VDD Methods	170
6.2.2.3	Hirshfeld Method	170
6.2.2.4	Hirshfeld-I Method	171
6.2.3	Partial Charges Based on Fitting Electrostatic Potential	172

- 6.2.3.1 Common ESP Fitting Methods 172
- 6.2.3.2 RESP and Relevant Methods 173
- 6.2.4 Partial Charges Based on Equalization of Electronegativity 174
- 6.2.5 Partial Charges Based on Other Ideas 175
- 6.3 Partial Charges of Typical Molecules 176
- 6.4 Computer Codes for Evaluating Partial Charges 179
- 6.5 Concluding Remarks 180
