Preface xv

Part I Overview and Background 1

1 Introduction 3

Dipesh Shikchand Patle and Gade Pandu Rangaiah

- 1.1 Process Intensification 3
- 1.2 Need for Control and Safety Analysis of Intensified Chemical Processes 5
- 1.3 Studies on Control and Safety Analysis of Intensified Chemical Processes 7
- 1.4 Scope and Organization of the Book 9
- 1.5 Conclusions 12
- References 13

2 Applications and Potential of Process Intensification in Chemical Process Industries 15

Chirla C.S. Reddy

- 2.1 Introduction 15
- 2.2 Benefits of Process Intensification Techniques 16
- 2.3 Static Mixers 17
- 2.4 Process Intensification for Separation Vessels 18
- 2.5 Process Intensification for Distillation 21
- 2.6 Process Intensification for Heating 24
 - 2.6.1 Steam Injection Heater 24
 - 2.6.2 Steam/Electric Heaters as a Replacement for Fired Heaters 25
 - 2.6.3 Process Intensification for Flue Gas Heat Recovery 26
 - 2.6.4 Process Heat Exchangers 26
 - 2.6.5 Sonic Horn 27
- 2.7 Steam Compression 27
- 2.8 Process Intensification for Carbon Capture 30
- 2.9 Process Intensification for Vacuum Systems 31

2.10	Process Intensification for Water Deaeration	33
2.11	Process Intensification for Development of Inherently Safer Design (ISD)	33
2.12	Process Intensification for Reducing Pressure Relief and Handling Requirements	35
2.12.1	Non-safety Instrumented Solutions for Pressure Relief Systems	37
2.12.2	Safety Instrumented System (SIS) Solutions for Reducing Pressure Relief Requirements	39
2.13	Process Intensification for Wastewater Recovery	41
2.14	Challenges of Process Intensification Techniques	43
2.15	Conclusions	44
	References	45

Part II Procedures and Software for Simulation, Control and Safety Analysis 47

3	Simulation and Optimization of Intensified Chemical Processes 49
	<i>Zemin Feng and Gade Pandu Rangaiah</i>
3.1	Introduction 49
3.2	Simulation of Chemical Processes 50
3.2.1	Usefulness of Process Simulation 50
3.2.2	Commercial Process Simulators 52
3.2.3	Free Process Simulators 53
3.2.4	Computational Methods for Process Simulation 53
3.3	Procedure for Simulation of (Intensified) Chemical Processes 56
3.3.1	Problem Analysis 56
3.3.2	Basic Process Flow Design 57
3.3.3	Process Intensification and Integration 57
3.3.4	Model Construction 57
3.3.5	Simulation and Convergence 59
3.3.6	Results Analysis 59
3.4	Optimization of (Intensified) Chemical Processes 59
3.4.1	Mathematical Optimization Methods 59
3.4.2	Optimization of Chemical Processes with a Process Simulator 62
3.4.2.1	Optimization Using MATLAB 62
3.4.2.2	Optimization Using Python 63
3.5	Challenges in the Simulation/Optimization of Intensified Chemical Processes 65
3.6	Case Study 66
3.6.1	Problem Analysis 66
3.6.2	Process Flow Design 67

3.6.3	Model Construction	69
3.6.4	Simulation and Convergence	70
3.6.4.1	Process Simulation	70
3.6.4.2	Economic Evaluation Criterion	71
3.6.4.3	Process Optimization	73
3.6.5	Results and Analysis	75
3.7	Conclusions	78
	References	79
4	Dynamic Simulation and Control of Intensified Chemical Processes	83
	<i>Zemin Feng and Gade Pandu Rangaiah</i>	
4.1	Introduction	83
4.2	Dynamic Simulation of Chemical Processes	84
4.2.1	Understanding Dynamic Simulation	84
4.2.2	Applications of Dynamic Simulation	87
4.2.3	Dynamic Simulation Software	88
4.3	Dynamic Simulation and Control Procedure	91
4.4	Dynamic Simulation and Control of Intensified Chemical Processes	98
4.4.1	Challenges Due to Process Intensification	100
4.5	Process Control	100
4.5.1	Controlled, Manipulated, and Disturbance Variables	101
4.5.2	Typical Control Loop	101
4.5.3	Control Degrees of Freedom	101
4.6	Case Study	102
4.6.1	Steady-state Simulation and Optimization	103
4.6.2	Preparation/Initialization for Dynamic Simulation	103
4.6.3	Control Structure Design	107
4.6.3.1	Composition Control Scheme	108
4.6.3.2	Temperature Control Scheme	110
4.6.4	Tuning of Controller Parameters	112
4.6.5	Analysis of Dynamic Simulation Results	112
4.7	Conclusions	120
	References	121
5	Safety Analysis of Intensified Chemical Processes	125
	<i>Masrina Mohd Nadzir, Zainal Ahmad, and Syamsul Rizal Abd Shukur</i>	
5.1	Introduction	125
5.2	Safety Analysis in Chemical Process Industry	126
5.2.1	Safety Analysis Tools	128
5.2.1.1	Hazard Identification	128
5.2.1.2	Risk Assessment	130
5.2.1.3	Inherently Safer Design (ISD)	131

5.2.1.4	Safety Instrumented Systems	132
5.2.1.5	Human Factors and Safety Culture	132
5.2.1.6	Regulatory Framework and Compliance	134
5.2.1.7	Monitoring and Continuous Improvement	135
5.3	Process Intensification and Safety Analysis	136
5.3.1	Impacts of Process Intensification on Safety	136
5.3.2	Safety Analysis in Intensified Process Design	137
5.3.2.1	Hazard Identification Techniques for Process Intensification Technologies	138
5.3.2.2	Risk Assessment for Process Intensification Technologies	140
5.3.3	Inherently Safer Design Principles Intensified Processes	141
5.4	Safety Management Systems for Intensified Processes	144
5.5	Safety Training and Competency for Intensified Processes	146
5.5.1	Importance of Safety Training and Competency	146
5.5.2	Developing Safety Training and Competency Programs	147
5.5.3	Utilizing a Blended Learning Approach	148
5.5.4	Assessing Training Effectiveness and Continual Improvement	148
5.5.5	Benefits of Effective Safety Training and Competency Management	148
5.6	Case Studies of Safety Analysis in Intensified Processes	149
5.7	Conclusions	151
	References	151

Part III Control and Safety Analysis of Intensified Chemical Processes 155

6	Control of Hybrid Reactive–Extractive Distillation Systems for Ternary Azeotropic Mixtures	157
	<i>Zong Yang Kong and Hao-Yeh Lee</i>	
6.1	Introduction	157
6.2	Steady-state Design of the RED	160
6.3	Dynamic Simulation Setup	161
6.4	Inventory Control Setup	162
6.5	Sensitivity Analysis	163
6.6	Quality Control Structures	165
6.6.1	Control Structure 1 (CS 1) – Simple Temperature Control	165
6.6.2	Control Structure 2 (CS 2) – Triple Point Temperature Control	168
6.6.3	Control Structure 3 (CS 3) – Triple Point Temperature Control Using SVD Analysis	170
6.6.4	Feedforward Control Structure 3 (FF-CS 3)	172
6.7	Control Performance Evaluation	177
6.8	Conclusions	178
	Acknowledgements	179
	Acronyms	179
	Nomenclature	180
	References	180

7	Process Design and Control of Reactive Distillation in Recycle Systems	183
	<i>Mihai Daniel Moraru, Costin Sorin Bildea, and Anton Alexandru Kiss</i>	
7.1	Introduction	183
7.2	Design of Reactive Distillation Processes	184
7.3	Control of Reactive Distillation Processes	188
7.4	Case Study: RD Coupled with a Distillation–Reactor System and Recycle	192
7.4.1	Basis of Design and Basic Data	192
7.4.2	Process Design	198
7.4.3	Process Control	201
7.4.4	Discussion	204
7.5	Conclusions	204
	References	205
8	Dynamics and Control of Middle-vessel Batch Distillation with Vapor Recompression	209
	<i>Radhika Gandu, Akash Buroolia, Dipesh Shikchand Patle, and Gara Uday Bhaskar Babu</i>	
8.1	Introduction	209
8.2	Conventional Middle-vessel Batch Distillation	211
8.2.1	A Systematic Simulation Approach of CMVBD	212
8.2.1.1	Model Equations	213
8.2.2	Constant Composition Control	216
8.3	Single-stage Vapor Recompression in Middle-vessel Batch Distillation	216
8.3.1	A Systematic Simulation Approach of SiVRMVBD	216
8.4	Performance Specifications	218
8.4.1	Energy Savings	218
8.4.2	Total Annual Cost	218
8.4.3	Greenhouse Gas Emissions	219
8.5	Results and Discussion	219
8.5.1	Conventional Middle-vessel Batch Distillation Column	219
8.5.1.1	Dynamic Composition Profiles	219
8.5.2	Single-stage Vapor Recompression in Middle-vessel Batch Distillation	222
8.5.3	Energetic, Economic, and Environmental Performance: CMVBD vs. SiVRMVBD	225
8.5.4	Constant Composition Control	226
8.5.4.1	SiVRMVBD-GSPI	229
8.5.5	Energetic, Economic, and Environmental Performance: CMVBD vs. Controlled CMVBD and SiVRMVBD	232
8.6	Conclusions	234
	References	234

9	Safety Analysis of Intensified Distillation Processes Using Existing and Modified Safety Indices 237
	<i>Savyasachi Shrikhande, Gunawant K. Deshpande, Gade Pandu Rangaiah, and Dipesh Shikchand Patle</i>
9.1	Introduction 237
9.2	Safety Indices for Process Safety Assessment 239
9.3	Description of Distillation Systems 241
9.3.1	Conventional Sequence of Columns 241
9.3.2	Dividing-Wall Column 241
9.3.3	Dividing-Wall Column with Mechanical Vapor Recompression 243
9.4	Selection of Safety Indices 244
9.5	Results and Discussion 245
9.5.1	Conventional Sequence of Columns 245
9.5.2	Dividing-Wall Column 251
9.5.3	Dividing-Wall Column with Mechanical Vapor Recompression 253
9.5.4	Comparative Analysis 255
9.6	Survey of Engineers and Discussion of their Responses 257
9.7	Improved PRI 262
9.8	Conclusions 263
	Acknowledgments 263
	References 264
10	Dynamic Safety Analysis of Intensified Extractive Distillation Processes with Independent Protection Layers 269
	<i>Chengtian Cui and Meng Qi</i>
10.1	Introduction 269
10.2	Preliminary 271
10.3	Process Studied 272
10.3.1	Process Intensification Measures 272
10.3.2	Steady-state Process Design 273
10.3.3	Process Intensification Analysis 274
10.4	Dynamics and Control 276
10.4.1	Control Basis 276
10.4.2	BPCS #1 279
10.4.3	BPCS #2 279
10.4.4	BPCS #3 282
10.5	Safety Analysis 284
10.5.1	Process #1 Safety Analysis 285
10.5.2	Process #2 Safety Analysis 286
10.5.3	Process #3 Safety Analysis 288
10.5.4	Dynamic Safety Analysis of Process #3 with IPLs 289

10.6	Conclusions	292
	Acknowledgments	293
	References	293
11	Operability and Safety Considerations in Intensified Structures for Purification of Bioproducts	295
	<i>Juan G. Segovia-Hernández, César Ramírez-Márquez, Gabriel Contreras-Zarazúa, Eduardo Sánchez-Ramírez, and Juan J. Quiroz-Ramírez</i>	
11.1	Introduction	295
11.2	Methodology	302
11.2.1	Control Behavior Analysis	306
11.2.1.1	Singular Value Decomposition	306
11.3	Methyl Ethyl Ketone	307
11.3.1	Methyl Ethyl Ketone Production Through a Conventional Process	308
11.3.1.1	MEK Production from Non-renewable Sources	308
11.3.2	Purification of MEK Through Process-Intensified Schemes	308
11.4	Intensification of Alcohol-to-Jet Fuel Process	313
11.4.1	Process Modeling and Optimization	314
11.4.2	Results	316
11.5	New Processes for Furfural and Co-products	318
11.5.1	Results	321
11.6	Lactic Acid	324
11.6.1	Lactic Acid Production by Reactive Distillation	325
11.6.2	Design and Synthesis of Intensified Processes	326
11.6.3	Optimization	326
11.6.4	Results and Discussion	327
11.7	Future and Perspectives	329
11.8	Conclusions	329
