## **Contents**

**About the Author** *ix* 

	Preface xi
1	Backgrounds and Principles of Low-Grade Heat Harvesting 1
1.1	Backgrounds and History 2
1.2	Working Principles of Current Systems 5
1.2.1	Seebeck Effect 5
1.2.2	Peltier Effect 6
1.2.3	Thomson Effect 6
1.2.4	Thermodiffusion Effect 8
1.2.5	Thermogalvanic Effect 9
1.2.6	Thermoextraction Effect 10
1.3	Parameters for Low-Grade Heat Harvesting 11
1.3.1	Seebeck Coefficient 13
1.3.2	Electrical Conductivity 13
1.3.3	Thermal Conductivity 14
1.3.4	Conversion Efficiency 15
1.3.5	Power Density 18
	References 19
2	Conventional Thermoelectric Devices for Low-Grade Heat
	Harvesting 21
2.1	Basic Structure and Working Principle of Electronic Thermoelectric
	Device 21
2.1.1	Working Principle of Electronic Thermoelectric Devices 21
2.1.1.1	Seebeck Effect 21
2.1.1.2	Peltier Effect 22
2.1.1.3	Thomson Effect 23
2.2	Material System of Electronic Thermoelectric Device 24
2.2.1	Bi <sub>2</sub> Te <sub>3</sub> -Based Thermoelectric Material 25
2.2.2	PbX ( $X = S$ , Se, Te) Compound 28
2.2.3	SiGe Alloy 31

2.3 Performance and Optimization Method of Electronic Thermoelectric Device 33 2.4 Manufacturing Process of Electronic Thermoelectric Devices 36 2.5 Design, Integration and Application of Electronic Thermoelectric Device 38 2.5.1 Single-Stage/Multi-Stage Device Structure Design 38 2.5.2 Selection of Electrode Material and Electrode Connection Technology 39 2.5.3 Thermoelectric Material/Electrode Transition Layer and Interface Structure 39 2.5.4 Device Application and Service Performance 40 References 42 3 Polymer-based Thermoelectric Devices for Low-Grade Heat Harvesting 43 3.1 Introduction 43 3.2 Conversion Process and Mechanism 45 3.3 Current Material Types and Design Principles 49 3.3.1 p-type Organic TE Materials 52 3.3.2 PEDOT Derivatives 56 3.3.4 Carbon Nanotubes/Conductive Polymer Composites 57 3.3.5 Inorganic Semiconductive Nanomaterials/Polymer Composites 58 3.4 Construction and Functionalization of TE Devices 60 References 64 4 Liquid-Based Thermocells for Heat-To-Current Conversion 67 4.1 Introduction 67 4.2 Basis of Thermocells Design 68 4.3 Engineering Strategies for Liquid-based Thermocells 74 4.3.1 Redox Couples 74 4.3.2 Electrolyte 77 4.3.3 Electrode 79 4.4 Direct and Indirect Thermocell Applications 82 References 85 5 Thermosensitive Thermocells for Low-Grade Heat Harvesting 87 5.1 Introduction 87 5.2 Design Principle and Method of Thermosensitive Thermocells 88 5.2.1 Working Principle of Thermosensitive Thermocells 90 5.2.3 Measurement Conditions of Thermosensitive Thermocells 90 5.2.3.1 Working Principle of Thermosensitive Thermocells 91	vi	Contents	
2.5 Design, Integration and Application of Electronic Thermoelectric Device 38 2.5.1 Single-Stage/Multi-Stage Device Structure Design 38 2.5.2 Selection of Electrode Material and Electrode Connection Technology 39 2.5.3 Thermoelectric Material/Electrode Transition Layer and Interface Structure 39 2.5.4 Device Application and Service Performance 40 References 42  3 Polymer-based Thermoelectric Devices for Low-Grade Heat Harvesting 43 3.1 Introduction 43 3.2 Conversion Process and Mechanism 45 3.3 Current Material Types and Design Principles 49 3.3.1 p-type Organic TE Materials 50 3.3.2 n-Type Organic TE Materials 52 3.3.3 PEDOT Derivatives 56 3.3.4 Carbon Nanotubes/Conductive Polymer Composites 57 3.3.5 Inorganic Semiconductive Nanomaterials/Polymer Composites 58 3.4 Construction and Functionalization of TE Devices 60 References 64  4 Liquid-Based Thermocells for Heat-To-Current Conversion 67 4.1 Introduction 67 4.2 Basis of Thermocells Design 68 4.3 Engineering Strategies for Liquid-based Thermocells 74 4.3.1 Redox Couples 74 4.3.2 Electrolyte 77 4.3.3 Electrode 79 4.4 Direct and Indirect Thermocell Applications 82 References 85  5 Thermosensitive Thermocells for Low-Grade Heat Harvesting 87 5.1 Introduction 87 5.2 Design Principle and Method of Thermosensitive Thermocells 88 5.2.1 Working Principle of Thermosensitive Thermocells 90 5.2.3 The Basic Principle and Design Points of Thermosensitive Thermocells 90 5.2.3 The Basic Principle and Design Points of Thermosensitive Thermocells 91		2.3	_
2.5 Design, Integration and Application of Electronic Thermoelectric Device 38 2.5.1 Single-Stage/Multi-Stage Device Structure Design 38 2.5.2 Selection of Electrode Material and Electrode Connection Technology 39 2.5.3 Thermoelectric Material/Electrode Transition Layer and Interface Structure 39 2.5.4 Device Application and Service Performance 40 References 42  3 Polymer-based Thermoelectric Devices for Low-Grade Heat Harvesting 43 3.1 Introduction 43 3.2 Conversion Process and Mechanism 45 3.3 Current Material Types and Design Principles 49 3.3.1 p-type Organic TE Materials 50 3.3.2 n-Type Organic TE Materials 52 3.3.3 PEDOT Derivatives 56 3.3.4 Carbon Nanotubes/Conductive Polymer Composites 57 3.3.5 Inorganic Semiconductive Nanomaterials/Polymer Composites 58 3.4 Construction and Functionalization of TE Devices 60 References 64  4 Liquid-Based Thermocells for Heat-To-Current Conversion 67 4.1 Introduction 67 4.2 Basis of Thermocells Design 68 4.3 Engineering Strategies for Liquid-based Thermocells 74 4.3.1 Redox Couples 74 4.3.2 Electrolyte 77 4.3.3 Electrode 79 4.4 Direct and Indirect Thermocell Applications 82 References 85  5 Thermosensitive Thermocells for Low-Grade Heat Harvesting 87 5.1 Introduction 87 5.2 Design Principle and Method of Thermosensitive Thermocells 88 5.2.1 Working Principle of Thermosensitive Thermocells 90 5.2.3 The Basic Principle and Design Points of Thermosensitive Thermocells 90 5.2.3 The Basic Principle and Design Points of Thermosensitive Thermocells 91		2.4	Manufacturing Process of Electronic Thermoelectric Devices 36
