Foreword – December 2024 *xv*

1	The Lab of the Future	1
1.1	Presentation of the FutureLab.NRW Concept	1
1.1.1	The Inspiration	1
1.1.2	The Starting Point	1
1.1.2.1	Instrumental Analysis for Small Molecule Quantification	1
1.1.2.2	Effect-based Analysis for Identifying Relevant Compounds of Interest	3
1.1.3	The Transformation of the Lab: New Concepts for the FutureLab. NRW	4
1.1.3.1	Instrumental Analysis for Large Molecule Quantification	4
1.1.3.2	Direct Coupling of Instrumental and Effect-based Analysis	5
1.1.3.3	Miniaturization	5
1.1.3.4	Digitalization	5
1.2	Presentation of the FutureLab.NRW Software Platform	6
1.2.1	Introductory Remarks	6
1.2.2	Overall Specifications	7
1.2.3	Inclusion of the FAIR Data Principles	8
1.3	The Center for Life Science Automation (CELISCA) – An Interview with Prof. Dr. Kerstin Thurow from the University of Rostock	8
1.3.1	Personal Introduction	8
1.3.2	CELISCA's Approach to Automation	9
1.3.3	Mobile Robots in the Lab	10
1.3.4	The Limits of Automation	12
1.3.5	The Future of Training	13
2	Electronic Laboratory Notebooks	17
2.1	Introductory Remarks – FAIR Data and the Reproduction Crisis	17
2.2	ELN Without LIMS?	17
2.2.1	A Brief and Not Comprehensive Definition of the Nature of an ELN	17
2.2.2	Some Important Functionalities of an ELN	19
2.2.2.1	Introductory Remarks	19
2.2.2.2	Metadata	19

2.2.2.3	Accessibility	19
2.2.2.4	Standardization	20
2.2.2.5	Data Protection	20
2.2.2.6	Versioning	20
2.2.2.7	Data Quality	21
2.2.2.8	Collaboration	21
2.2.2.9	Long-term Archiving	21
2.2.2.10	Data Security	21
2.2.2.11	Conclusion	22
2.3	Use-case: Digital Instrument Logs	22
2.3.1	Introductory Remarks	22
2.3.2	Implementation	22
2.4	Chemotion: Developing an Open-source Platform for Data Acquisition and Storage – An Interview with Dr. Patrick Hodapp from the Karlsruhe Institute of Technology	24
2.4.1	Personal Introduction	24
2.4.2	Motivation for Developing Chemotion	25
2.4.3	Meeting the Specific Needs of an Organic Chemistry Laboratory	26
2.4.4	Overcoming Barriers of Adoption	26
2.4.5	Improving the Quality and the Output of Publications	26
2.4.6	Long-term Maintenance of the Platform	27
2.4.7	Arguments Against Using an ELN	27
2.5	ELNs Are Dead! Long Live ELNs! – An Interview with Dr. Samantha Pearman-Kanza from the University of Southampton	28
2.5.1	Personal Introduction	28
2.5.2	Replacing Paper Notebooks	29
2.5.3	Choosing an Appropriate ELN	30
2.5.4	Data Privacy	31
2.5.5	Continuity of Platform	32
2.5.6	Further Research on ELNs – Overcoming Current Technical Limitations	32
2.5.7	Using Advanced AI Tools to Retrieve Valuable Information from the Data Lake	33
3	Digital Transformation, But How?	35
3.1	Introduction	35
3.2	Existing Problems Calling for a Digital Solution	36
3.2.1	Introductory Remarks	36
3.2.2	Stringent Standards	36
3.2.3	Manual Documentation	36
3.2.4	Data Integrity	37
3.2.5	Reproducibility	37
3.3	Challenges on the Road to a Digital Transformed Lab	38
3.3.1	Missing Guidance	38
3.3.2	Moon-shot Thinking	39

3.3.3	Legacy Devices	39
3.3.4	Heterogeneous Device Landscape	40
3.4	Digitization Versus Digital Transformation	41
3.5	Existing Approaches for Digitized Laboratory Environment	42
3.6	Methodical Approach	44
3.6.1	Introduction	44
3.6.2	Stakeholder Acquisition	44
3.6.3	Defining the Objective	46
3.6.3.1	Introduction	46
3.6.3.2	Tier One: Explorative Laboratory	46
3.6.3.3	Tier Two: Remote Controlled Laboratory	47
3.6.3.4	Tier Three: Semi-automatic Laboratory	47
3.6.3.5	Tier Four: Automatic Laboratory	47
3.6.3.6	Tier Five: AI Laboratory	47
3.6.3.7	Conclusion	47
3.6.4	Workflow Analysis	48
3.6.5	Workflow Abstraction	51
3.6.5.1	Introduction	51
3.6.5.2	Digitization of Measured Values	51
3.6.5.3	Automation	52
3.6.5.4	Process Control Commands	52
3.6.5.5	Process Control Variables	53
3.6.6	Gateway and Cybersecurity	53
3.6.7	Gateway Connector	54
3.6.8	Choosing the Middleware	55
3.6.8.1	Introduction	55
3.6.8.2	Commercial IoT Platform	55
3.6.8.3	Software Ecosystem	56
3.6.9	Choosing Network Protocols	57
3.6.10	Driver Development	58
3.6.11	IoT Server	59
3.6.12	Integrating Inter-Process Software	59
3.6.13	Workflow Implementation	59
3.6.14	Functional Integration	60
3.6.14.1	Introduction	60
3.6.14.2	Hardware Layer	60
3.6.14.3	Software Layer	61
3.7	Final Conclusion	61
3.8	Lessons Learned: An Interview with Dr. Jochen Tuerk, Head of the Cooperation Laboratory of Ruhrverband and Emschergenossenschaft / Lippeverband	62
3.8.1	Personal Introduction	62
3.8.2	Moon-shot Thinking	62
3.8.3	The Role of Digital Natives	64
3.8.4	Requirements of Guidelines	65

3.8.5	LIMS, ELN, or LES, That Is the Question	66
3.9	The Digital Transformation in the Chemical Industry – An interview with Dr. Joachim Richert from Technical University of Darmstadt	66
3.9.1	Personal Introduction	66
3.9.2	The Digital Transformation in Industry	67
3.9.3	Commitment of Users and Vendors to Achieve the Digital Transformation	68
3.9.4	Core Stakeholders	70
3.9.5	Shortcomings of Academic Research in Student Education	70
4	Communication Standards	77
4.1	Introduction to Device Communication	77
4.2	What Is a Communication Layer?	78
4.3	SiLA 2 and LADS OPC UA	79
4.3.1	Origins and Development	79
4.3.2	Communication Paradigms	79
4.4	SiLA – An Interview with Daniel Juchli from Wega Informatik AG	81
4.4.1	Personal Introduction	81
4.4.2	Plug-and-Play Connectivity	81
4.4.3	The Status Quo of SiLA	82
4.4.4	There are Many Standards – So Let’s Try to Harmonize, Using a New Standard	82
4.4.5	The Chicken and Egg Problem	83
4.4.6	The Role of Open Source in Lab Automation Standards	83
4.4.7	The Future of Lab Standardization: Trends and Challenges	83
4.5	LADS – An Interview with Dr. Matthias Arnold	84
4.5.1	Personal Introduction	84
4.5.2	Why Another Standard?	85
4.5.2.1	“Plug-and-Play Connectivity” – Revisited	85
4.5.2.2	OPC UA Companion Specifications and “Machine Plug and Play”	86
4.5.2.3	“Human Versus Machine Plug and Play” – LADS OPC UA Example	87
4.5.2.4	The Role of Ontologies and Taxonomies – FAIR Data and AI Enablement	87
4.5.3	The Future Perspective of LADS	88
4.5.4	Tackling Cybersecurity Challenges	89
4.5.5	Coexistence of the Two Standards	90
4.6	Digitalization at Roche – An Interview with Tom Kissling from F. Hoffmann – La Roche Ltd.	91
4.6.1	Personal Introduction	91
4.6.2	The Role of Standardization	91
4.6.3	Money Can Buy Everything, Can’t It?	91
4.6.4	The Concept of Digital Transformation at Roche	92
4.6.5	Academic Versus Industrial Research	92
4.7	Summary from the Perspective of a Device Integrator – A Brief Comment from Julian Luebke, Chief Business Officer at Labforward GmbH	92

5	Data and Data Processing Standards	95
5.1	Introduction	95
5.2	Data Standards	95
5.2.1	Introduction	95
5.2.2	The Basics of Data Standards	97
5.2.3	Use Cases for Open Data Standards	99
5.2.3.1	Introduction	99
5.2.3.2	Basic Parameters	99
5.2.3.3	Multidimensional Analytical Data	101
5.2.4	Software to Read, Write, and Process Open Data Standards	101
5.3	Data Processing	102
5.3.1	Introductory Remarks	102
5.3.2	Data Competences	105
5.3.3	Vendor Versus Open-source Processing Software	106
5.3.4	Reproducible Workflows with StreamFind	108
5.3.5	Automated Use of Results in Broader Smart Laboratory Workflows	109
5.4	An Overview About Important Data Standards: AnIML, ASM, and ADF – An Interview with Dr. Philip Wenig from Lablicate GmbH	111
5.4.1	Personal Introduction	111
5.4.2	Open-Source Versus Proprietary Software	112
5.4.3	A Brief and General Overview about AnIML, ASM, and ADF	112
5.4.4	The Future Perspective of Data Standards	113
5.5	Data Processing with a Focus on Advanced Data Analysis and Quality Assurance – An Interview with Dr. Gerrit Renner from University of Duisburg-Essen	114
5.5.1	Personal Introduction	114
5.5.2	Challenges of Data Processing with Vendor Software	115
5.5.3	Quality Assurance in Vendor and Open-source Software	116
5.5.4	Transparency in Data Processing	117
5.5.5	Opportunities from Advances in Data Science	118
6	Smart Digital Workflows	121
6.1	General Introduction	121
6.2	Temperature Monitoring	122
6.2.1	Introduction	122
6.2.2	First Approach: Off-the-shelf Software	124
6.2.3	Second Approach: DIY Low Cost	125
6.2.4	Notifications and Alarms	126
6.2.5	Conclusion	127
6.3	Labeling Workflow	127
6.3.1	Introduction	127
6.3.2	Implementation	128
6.3.3	Conclusion	129
6.4	Stock Solution Workflow	129
6.4.1	Introduction	129

6.4.2	Implementation	130
6.4.2.1	Digital SOP	130
6.4.2.2	Device Integration and Communication	131
6.4.2.3	Process Comparison and Efficiency Gains	132
6.4.3	Conclusion	133
6.5	Automation and Orchestration of Atline Analysis	133
6.5.1	Introduction	133
6.5.2	Implementation	134
6.5.2.1	Orchestration	134
6.5.2.2	Dataflow	135
6.5.2.3	Device Integration	136
6.5.3	Conclusion	137
6.6	Inventing the Smartlab – An Interview with Prof. Dr. Sascha Beutel from the Institute of Technical Chemistry at the Leibniz University of Hannover	138
6.6.1	Personal Introduction	138
6.6.2	A Look Back at the Beginning of the Digital Transformation	139
6.6.3	Promoting Interdisciplinary Education of Students	140
6.6.4	The Transformative Power of Machine Learning and Artificial Intelligence	141
6.6.5	The Future of Academic Research	142
7	Flexible Automation	145
7.1	Introduction	145
7.1.1	History of Laboratory Automation	145
7.1.2	Market Data	147
7.1.3	Flexible Laboratory Automation in the Context of FutureLab.NRW	147
7.2	Automation Components	148
7.2.1	Collaborative Robots	148
7.2.2	End Effectors	151
7.2.2.1	Introduction	151
7.2.2.2	Handling End Effectors	152
7.2.2.3	Process Tools	154
7.2.2.4	Sensors	154
7.2.2.5	Tool Changer	155
7.2.3	Cobot Programming	156
7.2.4	External Instruments	158
7.2.5	Monitoring Systems	160
7.2.6	Control Unit	161
7.3	Considerations for Implementation	163
7.3.1	Introduction	163
7.3.2	Notes on Installation	163
7.3.3	Practical Experiences	164
7.3.4	Safety Considerations	167
7.4	Outlook	168

7.5	Lab Automation in the Chemical Industry – An Interview with Dr. Marcel Vranceanu from BASF	168
7.5.1	Personal Introduction	168
7.5.2	Industrial Automation	169
7.5.3	The Role of No-code and Low-code Programming	170
7.5.4	The Impact of Automation	171
7.5.5	Mobile Robots in Action	172
7.6	Automation in an Academic Environment – An Interview with Dr. Tim Meyer from University Medical Center Goettingen	173
7.6.1	Personal Introduction	173
7.6.2	Automation as an Interdisciplinary Approach in Science	174
7.6.3	High Staff Turnover in Academic Research Institutes	175
7.6.4	The Role of Nonproprietary Communication Protocols	176
7.6.5	Future Research Perspectives	177
7.7	Small Automation Lexicon	177
8	Miniaturization in the Laboratory: Size Matters, But Smaller Is Better!	181
8.1	The Time Has Come	181
8.2	The Diversity of Miniaturization in Liquid Chromatography	182
8.2.1	Introduction	182
8.2.2	Why the Focus on Chromatographic Methods?	182
8.2.3	The Current State in Commercial Miniaturization	183
8.2.4	Capillary Chromatography – the Greener Alternative	185
8.3	Opening Up New Possibilities with Miniaturized Detectors	185
8.3.1	Introduction	185
8.3.2	LEDs Enhancing Sensitivity in Compact Systems	186
8.3.3	Miniaturization Enabling Field Analysis	187
8.4	Good Things Come on Small Chips	188
8.4.1	Introduction	188
8.4.2	Making LoC Accessible with Additive Manufacturing	189
8.4.3	The Classical Approach	189
8.4.4	Additive Manufacturing for Printing Modular and Highly Flexible LoC Systems	190
8.5	The Potential Use Cases of 3D-printed Microfluidic Devices	192
8.5.1	Introduction	192
8.5.2	Sensor Platforms for Accelerating Bioprocess Development	193
8.6	A Glimpse into the Future	194
8.6.1	Introduction	194
8.6.2	Technical and Scientific Challenges	195
8.6.3	Short-term: Overcoming Current Problems	195
8.7	Concluding Remarks, with a Personal Touch	196
9	The Sustainable Laboratory of the Future	201
9.1	Personal Reflection – The Last 10 Years	201
9.2	Sustainability Trends in the Lab	203

9.2.1	Sustainability in Science – from the Big Picture to a Common Understanding	203
9.2.2	A Holistic Approach to Science and Sustainability	204
9.2.3	Science Has a Big Impact	205
9.2.4	Sustainability in the Lab – Our Current State	211
9.3	Automation and Digitalization of the Lab from a Sustainability Perspective	220
9.3.1	General Introduction	220
9.3.2	Digitization as a Lever for Resource Conservation, Waste Reduction, and Process Optimization	221
9.3.3	Automation, the Internet of Things, AI, Machine Learning and Deep Learning are Revolutionizing the Way We Do Research	223
9.3.4	How Digitalization and AI Are Revolutionizing Analytical Methods	225
9.3.5	The Downside of Digitalization – and How to Use It Sustainably	228
9.4	Outlook: A Reflection About the Sustainable Lab of the Future	231
9.5	Sustainability as a Pivotal Pillar of the Future Lab – An Interview with James Connelly, Chief Executive Officer of My Green Lab	232
9.5.1	Personal Introduction	232
9.5.2	Academic Versus Industrial Labs	232
9.5.3	Education and the Importance of Grassroots Initiatives	233
9.5.4	Greenwashing	233
9.5.5	Open Access	234
10	Cybersecurity	243
10.1	Introduction	243
10.2	Cybersecurity Risks, Threats, and Mitigation Strategies	244
10.2.1	IT Services	245
10.2.2	Risks	246
10.2.3	Threats	247
10.2.4	Mitigation Strategies	248
10.3	Architectures, Concepts, Organizational and Technical Measures	250
10.3.1	Architectures of Remote Labs	250
10.3.2	Cybersecurity Threats in the Context of Remote Lab Architectures	251
10.3.3	Organizational and Technical Measures	252
10.3.3.1	Organizational Measures	252
10.3.3.2	Technical Measures	255
10.4	General Conclusion	259
	Index	263
