	From the Preface to the First Edition	<i>xvii</i>
	Preface to the Second Edition	<i>xix</i>
	Acknowledgments	<i>xxv</i>
	List of Abbreviations	<i>xxvii</i>
1	Introduction	1
1.1	Photochemistry and Photophysics in Science and Technology	1
1.2	Historical Notes	2
1.3	A New Dimension of Chemistry and Physics	3
1.4	The Nature of Light	5
1.5	Absorption of Light	7
1.6	Quantum Yield, Efficiencies, and Excited-State Reactivity	8
	References	10
2	Elementary Molecular Orbital Theory	11
2.1	Introduction	11
2.2	The Hydrogen Atom	11
2.3	Polyelectronic Atoms	13
2.4	From Atoms to Molecules	18
2.5	Electronic Structure of Homonuclear Diatomic Molecules	22
2.6	Electronic Structure of Heteronuclear Diatomic Molecules	26
2.7	Simple Polyatomic Molecules and Elements of Group Theory	27
2.7.1	Elements of Group Theory	27
2.7.2	Water	31
2.7.3	Ammonia	32
2.8	Typical Organic Molecules	34
2.8.1	Methane	34
2.8.2	Ethene	35
2.8.3	Benzene	38
2.8.4	Formaldehyde	40
2.9	Transition Metal Complexes	42
2.9.1	General Concepts	42

2.9.2	Typical Metal Complexes	49
	References	53
3	Light Absorption and Excited-State Deactivation	55
3.1	Light Absorption	55
3.1.1	Selection Rules	57
3.1.2	Symmetry Selection Rules	57
3.1.3	Spin Selection Rules	59
3.1.4	The Franck–Condon Principle	59
3.1.5	Visualization of Photochemical Reactions on Potential Energy Surfaces	62
3.2	Jablonski Diagram	64
3.3	Excited-State Deactivation	67
3.3.1	Vibrational Relaxation	67
3.3.2	Radiationless Deactivation	67
3.3.3	Radiative Deactivation	73
3.3.4	Radiative Lifetime	74
3.4	Chemical Reactions	75
3.5	Kinetic Aspects	75
3.6	Solvent and Temperature Effects	77
3.6.1	Solvatochromic Shift	77
3.6.2	Crossing of States	81
3.6.3	Temperature Effects on Excited-State Lifetime	81
3.6.4	Thermally Activated Delayed Fluorescence	82
3.7	Selected Species	83
3.7.1	Sodium Atom	83
3.7.2	Dioxygen	83
3.7.3	Naphthalene	86
3.7.4	Benzophenone	89
3.7.5	Zinc(II)Tetraphenylporphyrin	91
3.7.6	$[\text{Cr}(\text{en})_3]^{3+}$	93
3.7.7	$[\text{Co}(\text{NH}_3)_6]^{3+}$	95
3.7.8	$[\text{Ru}(\text{bpy})_3]^{2+}$	97
3.8	Semiconductors	99
	References	103
4	Excited States: Physical and Chemical Properties	109
4.1	Excited State as a New Molecule	109
4.2	Lifetime	109
4.3	Energy	110
4.4	Geometry	111
4.4.1	Small Molecules	112
4.4.2	Ethene	114
4.4.3	Ethyne	114
4.4.4	Benzene	115

4.4.5	Formaldehyde	116
4.4.6	Square Planar Metal Complexes	116
4.5	Dipole Moments	117
4.6	Electron Transfer	119
4.7	Proton Transfer	122
4.8	Excimers and Exciplexes	125
	References	127
5	From Molecules to Supramolecular Systems	129
5.1	Supramolecular (Multicomponent) Systems and Large Molecules	129
5.2	Electronic Interaction in Mixed-Valence Compounds	131
5.3	Electronic Interaction in Donor–Acceptor Complexes	133
5.4	Electronic Stimulation and Electronic Interaction in the Excited State	135
5.5	Excimers and Exciplexes Formation in Supramolecular Systems	138
	References	140
6	Quenching and Sensitization Processes in Molecular and Supramolecular Species	143
6.1	Introduction	143
6.2	Bimolecular Quenching	144
6.2.1	Stern–Volmer Equation	144
6.2.2	Kinetic Details	146
6.2.3	Static vs Dynamic Quenching	147
6.2.4	Sensitized Emission Quantum Yield	148
6.2.5	Spin Considerations	149
6.3	Quenching and Sensitization Processes in Supramolecular Systems	150
6.4	Electron-Transfer Kinetics	153
6.4.1	Marcus Theory	154
6.4.2	Quantum Mechanical Theory	157
6.4.2.1	The Electronic Factor	158
6.4.2.2	The Nuclear Factor	160
6.4.2.3	Optical Electron Transfer	160
6.5	Energy Transfer	161
6.5.1	Coulombic Mechanism	163
6.5.2	Exchange Mechanism	165
6.6	Role of the Bridge	166
6.7	Catalyzed Deactivation	168
	References	168
7	Molecular Organic Photochemistry	173
7.1	Introduction	173
7.2	Alkenes and Related Compounds	173
7.2.1	Basic Concepts	173
7.2.2	Photoisomerization of Double Bonds	174

7.2.3	Electrocyclic Processes	176
7.2.4	Sigmatropic Rearrangements	177
7.2.5	Di- π -Methane Reaction	178
7.2.6	Photocycloaddition Reactions	178
7.2.7	Photoinduced Nucleophile, Proton, and Electron Addition	179
7.3	Aromatic Compounds	180
7.3.1	Introduction	180
7.3.2	Photosubstitution	180
7.3.3	Photorearrangement	182
7.3.4	Phototransposition	182
7.3.5	Photocycloadditions	182
7.4	Carbonyl Compounds	186
7.4.1	Introduction	186
7.4.2	Photochemical Primary Processes	187
7.5	Photochemistry of Other Organic Compounds	188
7.5.1	Nitrogen Compounds	188
7.5.1.1	Overview	188
7.5.1.2	Photoisomerization of Azocompounds	189
7.5.2	Saturated Oxygen and Sulfur Compounds	189
7.5.3	Halogen Compounds	190
	References	194
8	Photochemistry and Photophysics of Metal Complexes	197
8.1	Metal Complexes	197
8.2	Photophysical Properties: General Concepts	197
8.3	Photochemical Reactivity: General Concepts	198
8.4	Relationships Between Electrochemistry and Excited-State Properties	200
8.4.1	Cobalt Complexes	200
8.4.2	Copper Complexes	201
8.4.3	Ruthenium Polypyridine Complexes	202
8.4.4	Excited-State Redox Potentials	204
8.5	Luminescent Metal Complexes	206
8.5.1	Ruthenium Complexes	207
8.5.2	Rhodium Complexes	208
8.5.3	Iridium Complexes	210
8.5.4	Platinum Complexes	212
8.5.5	Chromium Complexes	217
8.5.6	Iron Complexes	222
8.5.7	Copper Complexes	226
8.5.8	Lanthanoid Complexes	228
8.5.9	Porphyrin Complexes	231
8.6	Photochemical Processes	235
8.6.1	Types of Photoreactions	235
8.6.1.1	Photodissociation and Related Reactions	235

8.6.1.2	Photooxidation–Reduction Reactions	236
8.6.1.3	Intramolecular Rearrangements	236
	References	237
9	Experimental Techniques	245
9.1	Apparatus	245
9.1.1	Light Sources	245
9.1.2	Monochromators, Filters, and Solvents	252
9.1.3	Cells and Irradiation Equipment	254
9.1.4	Detectors	256
9.2	Steady-State Absorption and Emission Spectroscopy	258
9.2.1	Absorption Spectroscopy	258
9.2.1.1	Instrumentation	259
9.2.1.2	Qualitative and Quantitative Applications	260
9.2.1.3	Sample Measurement	260
9.2.2	Emission Spectroscopy	261
9.2.2.1	Instrumentation	261
9.2.2.2	Emission Spectra	263
9.2.2.3	Excitation Spectra	263
9.2.2.4	Presence of Spurious Bands	264
9.2.2.5	Quantitative Relationship Between Luminescence Intensity and Concentration	266
9.2.2.6	Stern–Volmer Luminescence Quenching	267
9.2.2.7	Emission Quantum Yields	268
9.3	Time-Resolved Absorption and Emission Spectroscopy	271
9.3.1	Transient Absorption Spectroscopy	271
9.3.1.1	Transient Absorption with Nanosecond Resolution	271
9.3.1.2	Transient Absorption with Femtosecond Resolution	273
9.3.2	Emission Lifetime Measurements	274
9.3.2.1	Single Flash	274
9.3.2.2	Gated Sampling	275
9.3.2.3	Upconversion Techniques	276
9.3.2.4	Single-Photon Counting	276
9.3.2.5	Data Analysis	278
9.3.2.6	Phase Shift	279
9.3.2.7	Luminescence Lifetime Standards	281
9.4	Absorption and Emission Measurements with Polarized Light	281
9.4.1	Linear Dichroism	281
9.4.2	Luminescence Anisotropy	283
9.4.3	Circular Dichroism	284
9.4.4	Circularly Polarized Luminescence	285
9.5	Reaction Quantum Yields and Actinometry	287
9.5.1	Reaction Quantum Yields	287
9.5.2	Actinometry	288
9.5.2.1	Potassium Ferrioxalate	289

9.5.2.2	Potassium Reineckate	290
9.5.2.3	Azobenzene	291
9.6	Other Techniques	292
9.6.1	Photothermal Methods	292
9.6.1.1	Photoacoustic Spectroscopy	292
9.6.1.2	Photorefractive Spectroscopy	293
9.6.2	Single-Molecule Spectroscopy	294
9.6.3	Fluorescence Correlation Spectroscopy	296
9.6.4	X-ray Techniques	297
	References	299
10	Interconversion of Light and Chemical Energy by Bimolecular Redox Processes	305
10.1	Light as a Reactant	305
10.2	Light as a Product	306
10.3	Conversion of Light into Chemical Energy	307
10.4	Conversion of Chemical Energy into Light: Chemiluminescence	309
10.5	Conversion of Chemical Energy into Light: Electrochemiluminescence	309
10.6	Light Absorption Sensitizers	310
10.7	Light Emission Sensitizers	312
10.8	Oscillating Chemiluminescence	314

11.1	Photocatalytic Processes	317
11.2	Photocatalysis in Organic Synthesis	319
11.2.1	Photoredox Catalysis	321
11.2.1.1	Reductive Dehalogenation Catalyzed by Visible Light	322
11.2.1.2	Merging Photocatalytic and Organocatalytic Cycles	322
11.2.2	Two-Photon-Driven Photoredox Catalysis	322
11.2.3	Direct Photocatalyzed Hydrogen Transfer	327
11.3	Heterogeneous Photocatalysis	330
11.4	Photocatalysis in Environmental Protection	331
11.4.1	Principles	331
11.4.2	Solar Disinfection (SODIS)	331
11.4.3	Photo-assisted Fenton Reaction	332
11.4.4	Photocatalytic Pollution Remediation	332
	References	333
12	Light-Powered Molecular Devices and Machines	339
12.1	Introduction	339
12.2	The Role of Light	340
12.3	Molecular Devices for Information Processing	342
12.3.1	Photochromic Systems as Molecular Memories	342

12.3.2	Molecular Logics	343
12.3.2.1	Luminescent Sensors as Simple Logic Gates	343
12.3.2.2	AND Logic Gate	344
12.3.2.3	Encoding and Decoding	344
12.4	Molecular Devices Based on Energy Transfer	346
12.4.1	Wires	346
12.4.2	Switches	348
12.4.3	Plug/Socket Systems	349
12.4.4	Light-Harvesting Antennas	350
12.5	Molecular Devices Based on Electron Transfer	354
12.5.1	Wires	354
12.5.2	Switches	360
12.5.3	Extension Cables	362
12.6	Light-Powered Molecular Machines	363
12.6.1	Basic Remarks	363
12.6.2	Rotary Motors Based on <i>cis-trans</i> Photoisomerization	365
12.6.3	Photochemically Driven Threading/Dethreading Movements	367
12.6.4	Molecular Pumps	372
12.6.5	Molecular Shuttles and Related Systems	373
12.6.5.1	An Artificial, Autonomous, Solar Light-Powered Molecular Motor	373
12.6.5.2	Three-Station Rotaxanes	376
12.6.5.3	Rotaxanes as Carriers	377
12.6.6	Molecular Walkers	377
12.6.7	Unidirectional Rotation in Catenanes	380
12.6.8	Photocontrolled Valves, Boxes, and Related Systems	383
	References	385
13	Natural and Artificial Photosynthesis	395
13.1	Energy for Spaceship Earth	395
13.2	Natural Photosynthesis	397
13.2.1	Light Harvesting: Absorption and Energy Transfer	398
13.2.2	Photoinduced Electron Transfer Leading to Charge Separation	398
13.2.2.1	Bacterial Photosynthesis	398
13.2.2.2	Green Plants Photosynthesis	400
13.2.3	Efficiency of Photosynthesis	402
13.3	Artificial Photosynthesis	404
13.3.1	Water Splitting by Photocatalytic Semiconductor Nanoparticles	408
13.3.2	Water Splitting in Photoelectrochemical Cells	411

15 Technological Applications of Photochemistry and Photophysics 447

- 15.1 Introduction 447
- 15.2 Photochromism 447
- 15.3 Luminescent Sensors 450
 - 15.3.1 Wind Tunnel Research 450
 - 15.3.2 Thermometers 451
 - 15.3.3 Detecting Warfare Chemical Agents 453
 - 15.3.4 Detecting Explosives 455
- 15.4 Optical Brightening Agents 457
- 15.5 Atmospheric Photochemistry 457
 - 15.5.1 Natural Processes Involving Oxygen 457
 - 15.5.2 Ozone Hole 458
- 15.6 Solar Cells 459
 - 15.6.1 Inorganic Photovoltaic (PV) Cells 459
 - 15.6.2 Organic Solar Cells (OSCs) 462
 - 15.6.3 Dye-Sensitized Solar Cells (DSSCs) 463
- 15.7 Electroluminescent Materials 465
 - 15.7.1 Light-Emitting Diodes (LEDs) 465
 - 15.7.2 Organic Light-Emitting Diodes (OLEDs) 466
 - 15.7.3 Light-Emitting Electrochemical Cells (LECs) 467
- 15.8 Polymers and Light 469
 - 15.8.1 Photopolymerization 469

15.8.2	Photodegradation	470
15.8.3	Stabilization of Commercial Polymers	470
15.8.4	Photochemical Curing	471
15.8.5	Other Light-Induced Processes	471
15.8.6	Photolithography	472
15.8.7	Stereolithography	473
15.8.8	Holography	474
15.9	Light for Chemical Synthesis	475
15.9.1	Photochlorination of Polymers	476
15.9.2	Synthesis of Caprolactam	476
15.9.3	Synthesis of Vitamins	476
15.9.4	Perfumes	477
	References	478
16	Research Frontiers	485
16.1	Introduction	485
16.2	Luminescent First-Row Transition Metal Complexes	485
16.2.1	Luminescent Cr(III) and V(III) Complexes	485
16.2.2	Luminescent Cu(I) Complexes	486
16.3	Aggregation-Induced Emission	489
16.4	TADF Chromophores	494
16.5	Photoactivated Molecular Machine	495
16.6	Photoactivated Molecular Tweezer in a Multifunctional Compound	498
16.7	Singlet Fission	499
16.8	Chirality-Induced Spin Selectivity in Electron Donor–Acceptor Dyads	503
16.9	Photocatalytic Water Splitting	504
