**Preface** *xi*

<b>1</b>	<b>Structure and Physical Properties of Metal Halide Perovskites</b>	<b>1</b>
1.1	Crystal Structure of Perovskite Materials	1
1.2	Exciton Effects in Perovskite Materials	2
1.2.1	Definition of an Exciton	2
1.2.2	Self-Trapping Excitons in Perovskite Materials	3
1.3	Size Effect of Perovskite Materials	5
1.4	Luminescence Properties of Perovskite Materials	7
1.4.1	Photon Generation in Perovskite Materials	8
1.4.2	Photophysical Processes and Efficiency Calculations of Perovskite Luminescence	10
1.4.3	Non-radiative Combination Mechanisms at Surfaces and Interfaces	13
1.5	Factors Influencing the Efficiency of Perovskite Light Emitting Diodes	16
1.5.1	Device Structure of the Perovskite Light Emitting Diode	16
1.5.2	Physical Parameters of Perovskite Light-Emitting Diodes	18
1.5.3	Device Performance Development of Perovskite Light-Emitting Diodes	20
1.6	Summary	23
	References	25
<b>2</b>	<b>Synthesis and Preparation of Perovskite Materials</b>	<b>35</b>
2.1	Introduction	35
2.2	Perovskite Materials Structures	36
2.2.1	3D Halide Perovskite Materials for Light-Emitting Diodes	36
2.2.2	Layered Halide Perovskite Materials	36
2.2.3	Halide Perovskite Quantum Dots/Nanocrystals	40
2.2.4	Commercial Prospects of Perovskite Materials	43
2.3	Preparation of Perovskite Nanomaterials	46
2.3.1	Mechanochemical Method	46
2.3.2	Ultrasonic Method	47

2.3.3	Microwave Method	49
2.3.4	Solvent Heat Method	50
2.3.5	Thermal Injection Method	51
2.3.6	Ligand-Assisted Reprecipitation	60
2.3.7	Ion Exchange Method	67
2.3.8	Laser Etching Method	68
2.4	Processing Technology for Large-Area Perovskite Films	69
2.4.1	Spin Coating Method	69
2.4.2	Vacuum Thermal Vapor Deposition Method	70
2.4.3	Printing Method	71
2.4.4	Vapor -Phase Deposition Method	71
2.4.5	Spraying Method	74
2.4.6	Template Method	75
2.4.7	Non-Template Method	75
2.5	Conclusion and Outlook	76
	References	76
<b>3</b>	<b>Near-Infrared Perovskite Light-Emitting Devices</b>	<b>83</b>
3.1	Introduction	83
3.2	Progress in Near-Infrared Perovskite Luminescence Materials	84
3.3	Near-Infrared Perovskite Luminescent Materials	86
3.3.1	Methylamine Lead Iodide (MAPbI <sub>3</sub> )	86
3.3.2	NIR-Emitting Materials Based on Perovskite	88
3.4	Strategies to Improve the Performance of NIR Perovskite Devices	90
3.4.1	NIR Perovskite Material Optimization	91
3.4.1.1	Near-Infrared Wavelength Adjustment	91
3.4.1.2	Multiple Quantum Well Structure	94
3.4.1.3	Molecular Passivation	95
3.4.2	Device Structure Optimization	96
3.5	Conclusion and Outlook	98
	References	99
<b>4</b>	<b>Perovskite Red Light-Emitting Materials and Devices</b>	<b>103</b>
4.1	The Development History of Perovskite Red Light-Emitting Diodes	103
4.2	Red Emission Perovskite Materials	105
4.2.1	Typical Red Emission Perovskite Material CsPbI <sub>3</sub>	105
4.2.2	Other Red Emission Perovskite Materials	107
4.2.2.1	Other ABX <sub>3</sub> and Hybridized ABX <sub>3</sub> -Type Materials	107
4.2.2.2	Double Perovskite	110
4.2.3	Red Emission Perovskite Synthesis	111
4.2.3.1	Synthesis of Nanocrystals	111
4.2.3.2	Synthesis of Quasi-Two-Dimensional Films	112
4.2.4	Optimization Strategies of Red Perovskite Materials	113
4.2.4.1	Doping	113
4.2.4.2	Surface Passivation	114

4.2.4.3	Multiple Quantum Well Structure	115
4.2.4.4	Ligand Engineering	116
4.2.4.5	Additive Engineering	117
4.3	Perovskite Red Light-Emitting Diodes	117
4.3.1	Device Structure and Common Materials for Each Functional Layer	117
4.3.2	Device Optimization Strategy	118
4.3.2.1	Energy Level Regulation	119
4.3.2.2	Light Extraction Technology	119
4.3.2.3	Interface Treatment Method	119
4.4	Conclusion and Outlook	120
	References	121
<b>5</b>	<b>Perovskite Green Light-Emitting Materials and Devices</b>	<b>129</b>
5.1	History of Green Perovskite Light-Emitting Diodes	129
5.2	Green Light Perovskite Materials	132
5.2.1	Pure Inorganic Perovskite Materials	134
5.2.2	Organic–Inorganic Hybrid Perovskite Materials	136
5.2.3	Synthesis of Perovskite Green Light-Emitting Materials	137
5.3	Development of Green Perovskite Light-Emitting Diodes	140
5.3.1	Structure of Green Perovskite Light-Emitting Diode Devices	140
5.3.2	Quantum Dot Green Perovskite Light-Emitting Diodes	141
5.3.3	Nanocrystalline Green Perovskite Light-Emitting Diodes	142
5.3.4	Quasi-2D Ruddlesden–Popper Green Perovskite Light-Emitting Diodes	146
5.4	Factors Affecting the External Quantum Efficiency of Perovskite Green Light-Emitting Diodes	146
5.4.1	Aspects of Materials	146
5.4.2	Aspects of the Device Structure	147
5.5	Strategies for Improving the External Quantum Efficiency of Green Perovskite Light-Emitting Diodes	147
5.5.1	Ligand Engineering	147
5.5.2	Crystal Engineering	150
5.5.3	Surface Engineering	151
5.5.4	Passivation Engineering	153
5.5.5	Optimization of the Device Structure	155
5.6	Other Properties of Green Perovskite Light-Emitting Diodes	158
5.7	Conclusion and Outlook	161
	References	161
<b>6</b>	<b>Blue Perovskite Light-emitting Materials and Devices</b>	<b>169</b>
6.1	Technology Development of Blue Perovskite Light-emitting Diodes	169
6.2	Blueshift Strategy	171
6.3	Perovskite Blue Light-emitting Materials	175

6.3.1	Perovskite Blue Light-emitting Materials with a Quasi-two-dimensional Structure	175
6.3.1.1	Development of New Bulky Cations	176
6.3.1.2	Mixing of Bulky Cations	181
6.3.1.3	Cationic Doping	181
6.3.2	Blue Light Perovskite Nanocrystals or Quantum Dot Materials	183
6.4	Synthesis and Use of New Long-Chain Ligands	183
6.5	Surface Modification of Nanostructures	184
6.6	Optimization of the Internal Structure	186
6.7	Process for the Preparation of Blue Light-Emitting Layers	190
6.7.1	Preparation of Three-Dimensional and Quasi-Two-Dimensional Perovskite Films	190
6.7.2	Preparation of Nano-Microcrystalline Precursors	191
6.8	Device Performance Optimization and Interface Engineering	191
6.8.1	Passivation of Film Defects	191
6.8.2	Selection and Optimization of Hole and Electron Injection Layers	192
6.8.3	Interface Engineering	193
6.9	Optimization of Device Stability	195
6.9.1	Lifetime of Perovskite Blue Light-emitting Diodes	195
6.9.2	Optimization of Efficiency Stability in Perovskite Light-emitting Diodes	196
6.9.3	Light Color Stability Optimization	198
6.10	Conclusion and Outlook	199
	References	200

## **7 Effect of Metal Ion Doping on Perovskite Light-Emitting Materials** 205

7.1	Metal Ion Doping Effect	207
7.1.1	Effect of A-site Metal Ion Doping on Perovskite Materials	208
7.1.2	Effect of B-site Metal Ion Doping on Perovskite Materials	210
7.2	Metal Ion-Doped Materials and Devices	212
7.2.1	Near-infrared Optical Perovskite Materials	212
7.2.2	Red Light Perovskite Materials	214
7.2.3	Green Light Perovskite Materials	216
7.2.4	Blue-Light Perovskite Materials	218
7.3	Metal Ion Doping Methods	220
7.3.1	Post-synthesis Ion Exchange Methods	220
7.3.2	Colloidal Synthesis Methods	221
7.3.3	The Thermal Injection Methods	223
7.3.4	High Temperature Solid-state Synthesis Methods	223
7.4	Conclusion and Outlook	224
	References	225

## **8 Non-lead Metal Halide Perovskite Materials** 231

8.1	Development History of Non-lead Blue Perovskite Materials	231
-----	---	-----

8.2	Preparation of Non-lead Metal Halide Materials	234
8.3	Types of Non-lead Metal Halide Materials	236
8.3.1	Tin-Based Perovskites Materials	236
8.3.2	Bismuth-Based Metal Halide Materials	238
8.3.3	Antimony-Based Metal Halide Materials	241
8.3.4	Copper-Based Metal Halide Materials	241
8.3.5	Europium-Based Metal Halide Materials	243
8.3.6	Bimetallic Cationic Halide Perovskites Materials	243
8.4	Methods for Optimizing the Fluorescence Quantum Efficiency of Non-lead Metal Halide Materials	247
8.4.1	Surface Passivation	247
8.4.2	Selection of Solvents and Undesirable Solvents	248
8.4.3	Doping	248
8.5	Conclusion and Outlook	251
	References	251
<b>9</b>	<b>Perovskite White Light-emitting Materials and Devices</b>	<b>255</b>
9.1	Background of WPeLED	255
9.2	Down-conversion Method	257
9.3	Full Electroluminescent PeLEDs	261
9.3.1	Yellow Perovskite Light-emitting Diodes	261
9.3.1.1	Zero-dimensional Sn-doped Halide Perovskites	261
9.3.1.2	2D (C <sub>18</sub> H <sub>35</sub> NH <sub>3</sub> ) <sub>2</sub> SnBr <sub>4</sub> Perovskite	263
9.3.1.3	Colloidal Undoped and Double-doped Cs <sub>2</sub> AgInCl <sub>6</sub> Nanocrystals	263
9.3.1.4	Introducing Separated Emitting Centers	264
9.3.2	Progress in the Research of Sky-Blue Perovskite Light-emitting Diodes	266
9.4	Single White Light Perovskite Materials and Self-trapped Excitons	271
9.4.1	Single White Light Perovskite Materials	271
9.4.1.1	(110) Perovskite with Corrugated Inorganic Layers	271
9.4.1.2	(001) Perovskite with Flat Inorganic Layers	274
9.4.2	Self-trapped Excitons	274
9.5	Perovskite–Organic Coupling White PeLEDs	278
9.6	Others	281
9.7	Conclusion and Outlook	281
	References	282
<b>10</b>	<b>Electron and Hole Transport Materials</b>	<b>285</b>
10.1	Background of Charge Transport Materials	285
10.1.1	Charge Transport of Metal Halide Perovskite Materials	286
10.1.2	Charge Transport Materials in PeLED	288
10.2	Electron Transport Materials in PeLEDs	289
10.2.1	Inorganic Oxides Electron Transport Materials	289
10.2.2	Inorganically Doped Electron Transport Materials	292
10.2.3	Organic Monolayer Electron Transport Materials	292

10.2.4	Organic Multilayer Electron Transport Materials	292
10.2.5	Doped Organic Electron Transport Materials	293
10.2.6	Organic–Inorganic Hybrid Electron Transport Materials	294
10.3	Hole Transport Materials in PeLEDs	294
10.4	Progress in the Study of Hole Transport Layers and Hole Injection Layers in Perovskite Light Emitting Diodes	295
10.4.1	PVK-Doped TPD, TCTA	296
10.4.2	PEDOT:PSS After Methanol Treatment	297
10.4.3	TB(MA) Instead of PEDOT:PSS	299
10.4.4	PSS-Doped Na	300
10.4.5	PVK-Doped NiO <sub>x</sub>	300
10.4.6	Quantum Dot Perovskite Light Emitting Diodes: PVK-Doped PTAA	300
10.4.7	PVK Blended with PBD	301
10.4.8	Double HTLs with PVK and TFB	302
10.4.9	Polyfluorenylbenzene Anion-Conjugated Polyelectrolytes with Counter Ions	303
10.5	Conclusion and Outlook	305
