a

absolute nodal coordinate formulation (ANCF) 92, 99
  electrical model of piezoelectric element *100*
  plate element *99*
acceleration measurement scheme 48, *49*
acceptor-doped polymers 108
additive manufacturing (AM) 281–282
  magnetostrictive materials processing by 282–284, *283*
  magnetostrictive materials production, benefits for 284–286
advanced composite materials 31
aerodynamic mesh 92
air-source heat pumps (ASHPs) 209–210, 212–213, *213*
  anti-frosting technology 228–232
  background of 207–213
  defrosting 232–238
  frosting mechanism 213–220, *214*
  frosting of 220–228, *221*, *222*
  outlook 238–239
air-to-air heat pumps 210
air-to-water heat pump 210
aluminum nitride (AlN) 176
  heat guide layers in SiNW-μTEGs 177–184
analytical models 217
ANCF. *see* absolute nodal coordinate formulation (ANCF)
angle of attack 96–98
anisotropic magnetoresistance (AMR) 289
anisotropy 346
anomalous Nernst effect 1
anti-frosting technology 228, 231–232
  dehumidity method 229–230, *230*
  preheating method 229
  summary 232
  surface treatment method 230–232, **231**
anti-icing coatings 231–232
antimony telluride (Sb_2Te_3), 146–147
aramid fabrics 31
arc plasma deposition 197, *198*
ASHPs. *see* air-source heat pumps (ASHPs)
asymptotic homogenization theory 326
auxetic cellular structure 38

b

barium titanate ($BaTiO_3$) 17, 327, 345, 371
  laminates 348
  material properties of **351**
barium titanate/poly-l-lactic acid (PLLA) nanosheets 63
  evaluation of pyroelectric properties 66–68, *67*, **68**
  fabrication of freestanding 64, *65*
  laser microscope image *65*

"bindex_PrintPDF" — 2026/7/17 — 12:41 — page 378 — #2

barium titanate/poly-l-lactic acid (PLLA) nanosheets (*Cont.*)
pyroelectric coefficient in fabricated flexible 64
results 64
XRD pattern of *66*
bendable TEG 120
bending moment 276–277
Berry connection 292–293
bileg device layout 159, *159*, 160–161, *161*
bioinspired self-lubricating TENGs 369
biomass 212
bipolaron 108
bismuth telluride (Bi_2Te_3) thin-films 146–147
fabrication 196–198, *197*, *198*
thermoelectric generators 198–201, *199–201*
bistable oscillators
composites with nonsymmetric layup as 34–38
black phosphorus 154–155
Boltzmann equation 1–2
bond dissociation energy 187
Brillouin zone 5
BTO. *see* barium titanate ($BaTiO_3$)

C

cantilevered beam 251
carbon-based materials 147–148
carbon-based nanomaterials 143
carbon fiber-reinforced polymer (CFRP) composites 18–27, 31
carbon fiber-reinforced polymer piezoelectric composites
characterization 23
electromechanical properties of piezoelectric CFRP 24–27
materials and test specimens 21–22
piezoelectric laminated CFRP composites 18–20
poling and lamination 22
preparation of 20
vibration energy-harvesting test *24*
carbon nanotubes (CNTs) 148
Carnot efficiency 1
Cartesian coordinate system 248, 271, 272
cellular sandwich structure 38
ceramic substrates 119
CFO. *see* cobalt ferrite (CFO)
chemical doping strategy 150
chemical vapor deposition (CVD) 162
circuit model 9, *11*
linear response of film-substrate system based on 10–12
circular business models 372–373, **373**
circular futures 372–373
closing loops in energy waste 372
CNTs. *see* carbon nanotubes (CNTs)
coating types
anti-frosting/anti-icing coatings 231–232
hydrophilic coatings 231–232
hydrophobic coatings 231, 232
ice phobic coatings 231–232
superhydrophobic coatings 231, 232
cobalt ferrite (CFO) 330
coefficient of performance (COP) 220–221
composite materials 346
composite structural design
composites with nonsymmetric layup as bistable oscillators 34–38
for energy harvesting 32
laminated composites with co-cured piezoelectric element 32–33
sandwich structures 38–39, *39*
schematic illustration of core topologies *39*
composite systems 9, *9*
compressor shutdown defrosting (CSD) 234
computational methods 326–327, *327*
COMSOL Multiphysics 176
conducting polymers 108, 143, 146
constitutive equation 269–271, **270**
contemporary electromagnetic harvesters 369
contemporary PVDF-based composites 368
conventional energy-harvesting methods 77, *79*
conventional general TEGs 119

"bindex_PrintPDF" — 2026/7/17 — 12:41 — page 379 — #3

conventional harvesting control systems 87
conventional μ-TEGs 158
COP. *see* coefficient of performance (COP)
coupling analysis 92
covalent organic frameworks 371
crystal symmetry 300
CSD. *see* compressor shutdown defrosting (CSD)
cutting-edge technology 63
CVD. *see* chemical vapor deposition (CVD)

d

data-driven circularity 373
decentralized energy systems 372
DED. *see* direct energy deposition (DED)
defrosting 232. *see also* frosting
  control strategies 235, **235**
  efficiency 234–235, **234–235**
  indoor air temperature fluctuation 236, **236**
  models for air-source heat pumps 236–237, **237, 238**
  summary 238
  types of 233–234
dehumidification 229–230
dehumidity method 229–230, *230*
device fabrication process 162–163
digital self-powered energy harvester
  fabrication of harvester prototype 79–81
  future development of self-powered harvester 86–87
  modified synchronized switch harvesting on inductor 83–86
  performance of harvester prototype 81–83
  self-powered harvester, concept of 78–79, *79*
digital transformation (DX) 265
Dirac cones 4
  type I Dirac cone 5
  type II Dirac cone 5
  type III Dirac cone 5
Dirac-electron 1, 4–9
direct energy deposition (DED) 257–258, *258*, 282, *283*, 284
district heating technology 210, 212
doped conducting polymers 108
doped PBFDO 109–111, *112*
  chemical structures *108*
  GIXRD pattern of as-prepared *110*
  Raman spectrum of negatively *111–112*
  reductive n-doping by tetramethyldihydroquinone *109*
doped PEDOT *108*
drop-cast method 109, 112
Drude model 153
dry etching techniques 162
DX. *see* digital transformation (DX)
dynamic defrosting models 236–237

e

Edelstein effect 293–294
effective electrical conductivity (σ_{eff}) 149
effective thermal conductivity (k_{eff}) 149
EHD. *see* electric heating defrosting (EHD)
elastic strain energy density 268
electret 371
electrical conductivity 139
  of Bi_2Te_3 and Sb_2Te_3 146
  of carbon nanotubes 148
  graphene 155
  graphene nanosheets 152
  of MXenes 153
  of PEDOT:PSS film 112, 144
  of polyaniline (PANI) 144–145
  of polymer-inorganic nanocomposites 150
  of polypyrrole (PPy) 145
  of SiNWs 189
  of thermoelectric materials 107, 139, 195, 369
  of unencapsulated PBFDO film 109
electric circuit 100
electric heating defrosting (EHD) 234
electricity generation mechanism of piezoelectric harvester 100–101, *101*

"bindex_PrintPDF" — 2026/7/17 — 12:41 — page 380 — #4

electric radiators 212
electromagnetic field
  constitutive equation 269–271, **270**
  coupled electromagnetic and mechanical field equations 272–273, *272*
  energy and work, *267*, 268–269
  interaction between mechanical field and 266–267, *266*, *267*
  magnetostrictive system design 272–273, *272*
  one-dimensional constitutive equation 271–272
  stress and strain 267–268, *267*
electromagnetic induction harvesters 369
electromagnetic transducers 369
electron-beam (EB) lithography 177
electrospinning method 69
emerging applications 372–373, **373**
empirical models 216–217
energy harvesting 63, 77, 171–172, 289–291, *291*, 367
  acceleration measurement scheme 48, *49*
  applications 247–260
  case studies 39, *52*
  circular business models and emerging applications 372–373
  circular futures 372–373
  circularity design and closing loops, energy waste 372
  composite structural design for 32–39
  electret, hydrogel and luminescent materials 371
  electromagnetic transducers 369
  experimental setup for vibrational test *43*
  fiber-based TENG 312–318, *313–315*, *317–319*
  field-free magnetization switching 296–302, 297, 298, 300, 301
  framework materials 371
  gait acceleration *49–50*
  hybrid and biocompatible platforms 371
  hybrid perovskite materials 371
  lead-free piezoelectrics 371
  magnetization switching driven 295–296, *296*
  market projections 367
  next-generation material platforms 370–371
  numerical and experimental power outcomes **52**
  performance, *42*, 78
  piezoelectric materials 368
  power output of different smart composite designs **42**
  prosthetics 46–51
  quantum and smart materials 371
  spin-current and spin–orbit torque 291–294, *292*, *293*, *295*
  strategic recommendations 373–374
  technological road map and evolution 368–370
  technologies 372
  thermoelectric energy generators 369–370
  three-axis acceleration measurement of different gait patterns **51**
  transportation 40, *41*
  triboelectric materials 307–318
  triboelectric nanogenerator (TENG) 307–312, *308–311*, 368
  two-dimensional materials 370–371
  wind farm 41–45, *46*
energy waste 372
epoxy resin 249–250
EPR. *see* extended producer responsibility (EPR)
equilibrium equations 347
e-textiles 372
Euler angles 340, 341
extended producer responsibility (EPR) 372

f

fabrication 196–198, *197*
  of AlN 191
  Bi_2Te_3 Thin-film 196–198
  device fabrication process 162
  of flexible thermoelectric composites 142
  of freestanding BTO/PLLA nanosheet 64, *65*
