Preface *xi*

Acknowledgement *xiii*

1	Overview of Molecule and Ion Transport Through Polymer Membranes	1
1.1	Molecule Transport	2
1.2	Ion Transport	3
1.3	Similarities and Differences Between Molecule and Ion Transport	4
1.3.1	Free Volume Theory	4
1.3.2	Facilitated Transport in the Solid State	5
1.3.3	Diffusion and Migration	7
1.3.4	Transport Parameters and Electroneutrality	7
1.4	Overview of Molecule and Ion Transport Through Polymer Membranes	8
1.4.1	Fundamentals on Polymeric Materials	9
1.4.2	Part 1: Molecule Transport Through Polymer Membranes	9
1.4.3	Part 2: Ion Transport Through Polymer Membranes	10
	References	11
2	Introduction to Polymeric Materials	13
2.1	Interactions of Polymer with Solvent and Polymer Solution	13
2.1.1	Flory–Huggins Lattice Theory	14
2.1.2	Solubility Parameter Approach	15
2.1.3	Limitations and Modifications of Flory–Huggins Theory	17
2.2	Phase Diagram and Phase Separation	18
2.2.1	Phase Diagram	19
2.2.2	Phase Separation	19
2.3	Rubbery and Glassy Polymers	20
2.3.1	Rubbery vs Glassy Polymers	21
2.3.2	Glass Transition Temperature	21
2.3.3	Theories for Glass Transition Temperatures	22
2.4	Nonequilibrium Features of Glassy Polymers	24
2.4.1	Nonequilibrium Features of Glassy Polymers and Physical Aging	24
2.4.2	Characterization of Sub-glass Transitions by Dynamic Mechanical Analysis	25

2.5	Free Volume Theory and Applications	26
2.5.1	Free Volume Theory	27
2.5.2	Applications of Free Volume Theory	28
2.5.3	Measurement of Free Volume	30
2.6	Crystalline Polymers	31
2.6.1	Crystal Structures	31
2.6.2	Crystallization Kinetics and the Degree of Crystallinity	32
2.7	Polymer Blends	33
2.8	Viscoelastic and Mechanical Properties	34
2.8.1	Viscoelastic Properties	34
2.8.2	Stress–Strain Behavior	35
	References	36

Part I Molecule Transport Through Polymer Membranes 39

3	Molecule Transport Through Polymer Membranes	41
3.1	Fick's Law and Solution-diffusion Mechanism	41
3.2	Sorption and Permeation Features in a Slab	43
3.2.1	Transient Sorption	44
3.2.2	Transient Permeation	45
3.3	Diffusion Through Polymers	46
3.3.1	Constant Diffusion Coefficient	46
3.3.2	Concentration-dependent Diffusion Coefficient	47
3.3.3	Temperature-dependent Diffusion and Theories for Activation Energy	48
3.3.4	Diffusion in Crystalline Polymers	50
3.4	Statistical View of Diffusion Coefficient	51
3.5	Free Volume Theory for Diffusion	52
3.5.1	Free Volume in Polymers	53
3.5.2	Theory of Cohen and Turnbull	54
3.5.3	Theory of Fujita	56
3.5.4	Theory of Miyamoto and Shibayama, and Vrentas and Duda	58
3.5.5	Temperature- and Concentration-dependent Diffusion Coefficients	58
3.5.6	Advantages and Limitations of Free Volume Theory	59
3.5.7	Measurement and Estimation of Free Volume and d -spacing	61
3.6	Sorption in Polymers	63
3.6.1	Thermodynamic View of Sorption	64
3.6.2	Sorption of Permanent Gases in Polymers	64
3.6.3	Sorption of Condensable Gas and Vapor in Rubbery Polymers	66
3.6.4	Sorption of Condensable Gas and Vapor in Glassy Polymers: Dual Sorption Model	67
3.6.5	Temperature-dependent Sorption	68
3.6.6	Sorption in Crystalline Polymers	69
3.7	Permeation Through Polymers	70
3.7.1	Structure–Properties Relationships for Gas Permeation	71

3.7.2	Gas Permeation in Polymers with Extremely Stiff Chains and High Free Volume	73
3.7.3	Effects of Free Volume or <i>d</i> -spacing on Permeation	76
3.7.4	Temperature-dependent Permeation	78
3.7.5	Gas Permeation Through Crystalline Polymers	79
3.8	Mathematical Models for Transient Sorption and Permeation Through Glassy Polymers and Composite Membranes	79
3.8.1	Transient Sorption and Permeation for a Glassy Slab	80
3.8.2	Transient Sorption for a Glassy Sphere	81
3.8.3	Time-dependent Surface Concentration	82
3.8.4	Transient Sorption for a Composite Film	83
3.9	Transient Sorption of Organic Vapor in Polymers	85
3.9.1	Transient Sorption of Organic Vapor in Rubbery Polymers	85
3.9.2	Transient Sorption of Organic Vapor in Glassy Polymers	86
3.9.3	Transient Sorption of Organic Vapor in Composite Membranes	87
3.10	Mass Transport Overview: Fickian vs non-Fickian Behavior	88
	References	89
4	Facilitated Transport Phenomena in the Solid State	93
4.1	Facilitated Transport in the Liquid State and the Solid State	94
4.2	Mathematical Models for Facilitated Transport in the Solid State	96
4.2.1	Dual-mode Transport Model	97
4.2.2	Effective Diffusion Coefficient Model	98
4.2.3	Limited Chain Mobility Model	99
4.2.4	Concentration Fluctuation Model	101
4.3	Concentration Fluctuation Model vs Direct Hopping Models	105
4.4	Facilitated Oxygen Transport	106
4.4.1	Reversible Oxygen Solubility	107
4.4.2	Kinetics of Reversible Interactions	108
4.4.3	Facilitated Oxygen Transport	108
4.5	Facilitated Olefin Transport	109
4.5.1	Metallic Ion Carriers	109
4.5.2	Surface-activated Metallic Nanoparticulate Carriers	115
4.6	Facilitated CO ₂ Transport in Solid and Quasi-solid States	121
4.6.1	Interactions of CO ₂ with Lewis Bases and Acids in Aqueous Solution	122
4.6.2	Polymer Membranes with Lewis Bases	128
4.6.3	Polymer Electrolyte Membranes with Lewis Acids	131
4.6.4	Polymer Membranes with Ionic Liquids	134
4.6.5	Surface-activated Metallic Nanoparticle	138
4.7	Challenges and Prospects	139
	References	140
5	Selective Transport Membranes	145
5.1	Definitions of Permeability and Selectivity	146
5.2	Overview for Separation Performance of Gas Mixtures	147

5.3	Theoretical Basis for Relationship Between Permeability and Selectivity (Upper-bound Curves)	148
5.4	Polymeric Structure–Properties Relationship	151
5.4.1	Polymers with Flexible Chains and High Free Volume	152
5.4.2	Ductile and Tough Glassy Polymers	153
5.4.3	Polymers with Extremely Stiff Chains and High Free Volume	155
5.4.4	Emerging Polymer Materials	160
5.5	Time-dependent Separation Performance: Physical Aging and Plasticization Effects in Glassy Polymers	163
5.5.1	Physical Aging and Permeability Changes	163
5.5.2	Physical Aging and Plasticization with Highly Soluble Diluents	164
5.6	Facilitated Transport Membranes in the Solid and Quasi-solid States	166
5.7	Oxygen Separation with Facilitated Transport Membranes	167
5.8	Olefin Separation with Facilitated Transport Membranes	168
5.8.1	Polymer Electrolyte Membranes Containing Metallic Ion Carriers	169
5.8.2	Surface-activated Metallic Nanoparticle Carriers	173
5.9	Carbon Dioxide Separation with Facilitated Transport Membranes	175
5.9.1	Polymer Membranes with Lewis Bases	176
5.9.2	Polymer Membranes with Lewis Acids	180
5.9.3	Polymer Membranes with Ionic Liquids (ILs)	183
5.9.4	Bicontinuous Structures Including Ion Exchange Membranes	189
5.9.5	Effects of Water in Quasi-solid Membranes	191
	References	192
6	Measurement of Molecule Transport Properties	199
6.1	Definitions of Diffusion Coefficient, Solubility Coefficient, and Permeability	200
6.2	Permeation and Sorption Features in a Slab Membrane	202
6.3	Permeation Method for a Slab Membrane: Manometric and Time-lag Methods	202
6.3.1	Theoretical Backgrounds	202
6.3.2	Experimental Methods for Permeation	203
6.4	Sorption Method for a Slab Membrane: Gravimetric Methods	205
6.4.1	Theoretical Backgrounds	205
6.4.2	Experimental Methods for Transient Sorption	206
6.4.3	Experimental Methods for Equilibrium Sorption	208
6.5	Concentration-dependent Diffusion Coefficient	209
6.6	Variable Surface Concentration	209
6.7	Sorption in a Sphere	210
6.8	Pulsed Field Gradient (PFG)-NMR for Diffusion Coefficient	211
	References	212
7	Applications of Selective Transport Membranes	213
7.1	Structure and Transport Through Composite Membranes	214
7.2	Mathematical Model for Composite Membranes: Resistance Model	216
7.3	Fabrication of Composite Membranes	219
7.3.1	Thermally Induced Phase Separation	220

7.3.2	Nonsolvent-induced Phase Separation	221
7.4	Structures and Mass Transport in Modules	222
7.4.1	Structures of Representative Membrane Modules	222
7.4.2	Membrane Modules for Gas Separation	223
7.5	Applications of Gas Transport Membranes	223
7.5.1	Hydrogen Separation	224
7.5.2	Oxygen/Nitrogen Separation	225
7.5.3	Carbon Dioxide Separation	226
7.5.4	Olefin/Paraffin Separation	229
7.6	Conclusions and Future Directions	230
7.6.1	Established Processes	230
7.6.2	Developing Processes	230
7.6.3	Emerging Processes	230
	References	231
	Part II Ion Transport Through Polymer Membranes	233
8	Basic Electrochemistry for Ion Transport	235
8.1	Electrochemical Devices and Key Terminologies	235
8.1.1	Reduction vs Oxidation	235
8.1.2	Galvanic Cells vs Electrolytic Cells	236
8.1.3	Cathode vs Anode and Positive Electrode vs Negative Electrode	237
8.1.4	Charge Transport vs Charge Transfer	237
8.1.5	Electric Potential vs Electric Energy	238
8.2	Electric Potential	239
8.2.1	Electrode Potential	239
8.2.2	Standard Electrode Potential	240
8.2.3	Concentration-dependent Electrical Potential: Nernst Equation	240
8.3	Electrochemical Redox Reactions and Charge Transfer Kinetics	242
8.3.1	Electrochemical Redox Reaction Kinetics	242
8.3.2	Current–Voltage Relationship: The Butler–Volmer Equation	244
8.3.3	Tafel Plot	246
8.4	Interfacial Charge Transfer Through Electric Double Layer	247
8.4.1	Electric Double Layer	247
8.4.2	Charge Transfer Through Electric Double Layer	249
8.5	Transport of Charged Species and Electric Current	250
8.5.1	Electrochemical Potential	251
8.5.2	Transport of Charged Species: Diffusion, Migration, and Convection	251
8.5.3	Electric Current Density	253
8.5.4	Ion Conductivity, Transport, and Transference Numbers	254
	References	255
9	Polymer Electrolytes	257
9.1	Definitions of Ion Conductivity, Mobility, and Transport Numbers	257
9.2	Formation of Polymer Electrolyte to Generate Charge Carriers	258
9.2.1	Thermodynamics for Formation of Polymer Electrolytes	258
9.2.2	Generation of Free Charge Carriers	263

9.3	Polymeric Chain Mobility and Glass Transition Temperature	265
9.4	Mechanism of Ionic Transport	268
9.4.1	Free Volume Model	269
9.4.2	Conformational Entropy Model	271
9.4.3	Dynamic Bond Percolation Model	272
9.4.4	Anderson and Stuart Model	273
9.5	Ionic Conduction and Transport Number Through Polymer Electrolytes	274
9.5.1	Solid Polymer Electrolytes Based on PEO	275
9.5.2	Emerging Polymeric Solvents	276
9.5.3	Polymer-in-Salts: Novel Approach	276
9.5.4	Nanocomposites	280
9.5.5	Transport Number	280
9.6	Temperature Dependence of Ionic Transport	281
9.6.1	Vogel-Tamman-Fulcher Equation	282
9.6.2	Williams-Landel-Ferry Equation and Master Curves	283
9.7	Interfacial Charge Transfer Between SPE and Electrode	284
9.8	Prospects of Polymer Electrolytes	285
	References	285
10	Ion-exchange Membranes	289
