Preface *xiii*

1	Semiconductor Physics	1
1.1	Introduction	1
1.2	Properties of Semiconductors	2
1.2.1	Atomic Bonding of Semiconductors	2
1.2.2	External Modulation Effects	3
1.3	Crystal Structure and Types of Semiconductors	6
1.3.1	Lattice and Crystal Systems	6
1.3.2	Reciprocal Lattice and Miller Indices	9
1.3.3	Common Semiconductor Crystal Structures	11
1.4	Carrier Transport	14
1.4.1	Carrier Drift and Diffusion	14
1.4.2	Quasi-Fermi Levels and Electrochemical Potentials	18
1.4.3	Carrier Generation and Recombination	19
1.5	Doping Process	22
1.5.1	Point Defects and Energy Levels	22
1.5.2	Doping Techniques	25
1.5.2.1	Thermal Diffusion	25
1.5.2.2	Ion Implantation	29
1.6	Energy Band Theory	31
1.6.1	Quantum Mechanical Equation and Bloch Wavefunction	31
1.6.2	Band Structures and Carrier Transport	34
1.7	PN Junctions	37
1.7.1	Depletion Region and Built-in Potential	38
1.7.2	Current-Voltage Characteristics	40
1.7.3	Breakdown Mechanisms in PN Junctions	44
	References	45
2	Synthesis and Characterization of Optoelectronic Materials	47
2.1	Introduction	47
2.2	Synthesis of Semiconductors	48

2.2.1	Chemical Method	48
2.2.1.1	Solid/Liquid Phase Chemical Synthesis	48
2.2.1.2	Vapor Phase Chemical Synthesis	51
2.2.2	Physical Method	53
2.2.2.1	Melt Growth Techniques	54
2.2.2.2	Vapor Phase Physical Deposition	55
2.2.3	Epitaxy Growth	57
2.3	Characterization	60
2.3.1	Characterization of Electrical Properties	60
2.3.1.1	Four Probe Measurement	60
2.3.1.2	Hall Effect Measurement	64
2.3.1.3	C-V and I-V Measurements	67
2.3.2	Characterization of Optical Properties	70
2.3.2.1	Photoluminescence Spectrum	70
2.3.2.2	Ultraviolet-Visible Absorption Spectrum	74
2.3.2.3	Fourier Transform Infrared Spectrum	76
2.3.2.4	X-Ray Photoelectron Energy Spectrum	78
	References	81
3	EUV Lithography Process of Semiconductor Devices	83
3.1	Introduction	83
3.2	EUV Lithography System and Working Principles	85
3.2.1	EUV Light Source and Exposure System	85
3.2.2	EUV Lithography Equipment	86
3.3	Development of Resist for EUV Lithography	88
3.3.1	Polymer-Based Chemically Amplified Resist	88
3.3.2	Molecular Glass Resist	89
3.3.3	Metal-Based Nanoparticles Resist	91
3.4	Mask Materials and Designs for EUV Lithography	94
3.4.1	EUV Mask Fabrication Process	95
3.4.2	Mask Substrate	96
3.4.3	ML Mirror Layer	97
3.4.4	Absorber Layer	99
3.5	Conclusions and Perspectives	101
	References	103
4	Transistors	107
4.1	Introduction	107
4.2	Bipolar Transistors	107
4.2.1	Introduction	107
4.2.2	Device Structures and Working Principles	108
4.2.3	Biasing Modes and Circuit Configurations	111
4.2.3.1	Biasing Modes	111
4.2.3.2	Circuit Configurations	111

4.2.4	NPN and PNP BJTs	113
4.2.5	Heterojunction Bipolar Transistors	117
4.3	Field-Effect Transistors	119
4.3.1	Metal–Oxide–Semiconductor FETs	120
4.3.1.1	Enhancement-Mode Operation	123
4.3.1.2	Depletion-Mode Operation	123
4.3.2	Junction FETs	126
4.3.3	Metal–Semiconductor FETs	131
4.3.4	Modulation-Doped FETs	137
4.4	Thin-Film Transistors	142
4.4.1	Introduction	142
4.4.2	Device Structures and Characterizations	142
4.4.2.1	Current On/Off Ratio ($I_{\text{ON}}/I_{\text{OFF}}$)	145
4.4.2.2	Turn-On Voltage (V_{ON})	145
4.4.2.3	Threshold Voltage (V_{TH})	145
4.4.2.4	Subthreshold Swing (SS)	145
4.4.2.5	Mobility (μ)	146
4.4.3	Representative Materials and Devices	147
4.4.4	Emerging Applications	148
4.4.4.1	Flexible and Wearable Electronics	148
4.4.4.2	Biosensors and Biomedical Applications	149
4.4.4.3	Active-Matrix Displays and Transparent Electronics	149
4.4.4.4	Internet of Things (IoT)	149
4.4.4.5	Neuromorphic and Brain-Inspired Computing	149
4.4.4.6	Stretchable and Implantable Electronics	150
	References	150
5	Luminescent Materials and Devices	151
5.1	Introduction	151
5.2	Principle of Semiconductor Luminescence	151
5.2.1	Radiative Recombination of Nonequilibrium Carriers	151
5.2.1.1	Band-to-Band Recombination	152
5.2.1.2	Band-to-Local-Energy-Level Recombination	153
5.2.1.3	Donor–Acceptor Pair Recombination	154
5.2.1.4	Exciton Recombination	155
5.2.1.5	Isoelectronic Center Recombination	156
5.2.2	Nonradiative Recombination Process	157
5.2.2.1	Multi-phonon Process	157
5.2.2.2	Auger Recombination	157
5.2.3	Luminescent Semiconductors	158
5.2.3.1	III–V Group Semiconductors	158
5.2.3.2	II–VI Group Semiconductors	160
5.2.3.3	Silicon Carbide (SiC)	162
5.2.3.4	Organic Materials	162

5.2.3.5	Phosphors	162
5.2.3.6	Metal Halides	162
5.3	Structure and Feature of LEDs	164
5.3.1	Principle and Structure of LEDs	164
5.3.1.1	Homojunction LEDs	164
5.3.1.2	Double-Heterojunction LEDs	165
5.3.2	Optical Properties of LEDs	167
5.3.2.1	Efficiency of LEDs	167
5.3.2.2	Luminescent Spectra	167
5.3.2.3	Distribution of Emission Intensity	168
5.3.2.4	Light-Extraction Efficiency	168
5.3.2.5	Luminous Flux and Radiant Flux	170
5.3.2.6	Luminous Intensity, Luminance, and Illuminance	170
5.3.2.7	Temperature Effect	170
5.4	Process of LEDs	171
5.4.1	Growth of Emitting Materials in LEDs	171
5.4.1.1	Growth Model of Emitting Materials in LEDs	171
5.4.1.2	Growth of Emitting Layers	172
5.4.2	Manufacture of LED Chips	175
5.5	GaN LEDs	180
5.5.1	Structure and Basic Properties of Nitrides	180
5.5.2	Blue GaN LED	181
5.5.3	Green and UV GaN LED	183
5.6	Perovskite LEDs	186
5.6.1	Structure and Progress of Perovskite LEDs	186
5.6.2	Efficiency Enhancement of Perovskite LEDs	187
5.6.2.1	Modulation of Carrier Dynamics	187
5.6.2.2	Interfacial Engineering	188
5.7	White LEDs	190
5.7.1	GaN-Based White LEDs	190
5.7.2	Perovskite-Based White LEDs	191
	References	193
6	Superluminescent Light-Emitting Diodes	195
6.1	Introduction	195
6.2	History of SLED	196
6.3	Principle of Active-MMI SLED	200
6.3.1	Self-Imaging Consideration	200
6.3.2	Wide-Spectrum Consideration	201
6.4	Merit and Results of Active-MMI SLED	202
6.4.1	High-Power and Low Wall-Plug Consumption	205
6.4.2	Spectrum and Ripple Analysis	207
6.4.3	Field Patterns and Fiber-Coupling Efficiency	208
	References	213

7	Solar Cells	215
7.1	Introduction	215
7.1.1	Overview of Chapter	215
7.1.2	Definition of Solar Cells	215
7.1.3	Importance of Solar Cells in Renewable Energy	216
7.2	Basic Principles of Solar Cells	217
7.2.1	Solar Spectrum and Irradiance	217
7.2.2	Photovoltaic Effect	220
7.2.3	Solar Cell Structure	221
7.2.4	Parameters of Solar Cells	223
7.3	Typical Solar Cells	225
7.3.1	Si Solar Cell	225
7.3.2	CuInGaSe Solar Cell	227
7.3.3	CdTe Solar Cell	228
7.3.4	Organic Solar Cells	230
7.3.5	Perovskite Solar Cell	231
7.3.5.1	Crystal Structure of Perovskite Materials	231
7.3.5.2	Device Structure of Perovskite Solar Cells	232
7.3.5.3	Carrier Transport in Perovskite Solar Cells	233
7.3.5.4	Primary Characterization Instrument	234
7.4	Manufacturing of Solar Cells	236
7.4.1	Si Solar Cell	236
7.4.1.1	Atomic and Band Structures of Crystalline Silicon	236
7.4.1.2	Properties of Crystalline Silicon	238
7.4.1.3	Synthesis Method of Crystalline Silicon	239
7.4.2	Perovskite Solar Cells	239
7.4.2.1	One-Step Method	239
7.4.2.2	Two-Step Method	240
7.4.2.3	Vapor-Deposition Method	241
7.4.2.4	Vapor-Assisted Solution Method	241
7.5	Applications of Solar Cells	242
7.6	Conclusion	244
	References	246
8	Photodetectors	249
8.1	Introduction	249
8.2	Principle of Photodetectors	251
8.2.1	Photoconductive Type	251
8.2.1.1	Photoconduction Effect	251
8.2.1.2	Theory of Photoresistor	252
8.2.1.3	Current–Voltage Characteristics	257
8.2.1.4	Photoelectric Characteristics	257
8.2.1.5	Sensitivity and Gain	258
8.2.1.6	Prehistory Effect	260

8.2.2	Photodiode Type	261
8.2.2.1	PN Junction Photodiode	261
8.2.2.2	Schottky Barrier Photodiode	261
8.2.2.3	Metal–Insulator–Semiconductor Photodiode	262
8.2.2.4	Avalanche Photodiode	262
8.2.2.5	PIN Photodiode	263
8.2.3	Photovoltaic Type	263
8.2.4	Photomultiplier Tube Type	264
8.3	General Metrics of Photodetectors	265
8.3.1	Dark Current	265
8.3.2	Responsivity	266
8.3.3	Detectivity	266
8.3.4	Quantum Efficiency	267
8.3.5	Spectral Range	267
8.3.6	Response Time	267
8.3.7	Noise	268
8.4	Perovskite Photodetectors	269
8.4.1	Infrared Detectors	271
8.4.2	Visible-Light Detectors	272
8.4.3	Ultraviolet-Light Detectors	272
8.4.4	X-Ray Detectors	273
8.4.4.1	Direct-Type X-Ray Detectors	274
8.4.4.2	Indirect X-Ray Detection	278
8.4.5	Gamma-Ray Detectors	279
8.5	Metal–Semiconductor–Metal Photodetectors	280
8.5.1	Introduction	280
8.5.2	Design Considerations	282
8.5.3	Advancements and Applications	282
8.6	Organic Photomultiplication Detectors	283
8.6.1	Introduction	283
8.6.2	Design Considerations	283
8.6.3	Advancements and Applications	284
	References	285
9	Graphene and Graphene-Based Devices	287
9.1	Introduction	287
9.2	Structure and Properties of Graphene	287
9.2.1	Crystal Structure of Graphene	287
9.2.2	Extraordinary Properties of Graphene	289
9.2.2.1	Electronic Properties	289
9.2.2.2	Optical Properties	291
9.2.2.3	Mechanical Properties	291
9.2.2.4	Thermal Properties	292
9.2.2.5	Chemical and Biological Properties	293
9.3	Preparation Methods of Graphene	294

9.3.1	Mechanical Exfoliation	294
9.3.2	Electrochemical Exfoliation	296
9.3.3	Direct Sonication Synthesis	297
9.3.4	Epitaxial Growth	297
9.3.5	CVD Growth	298
9.3.6	Others	299
9.4	Graphene-Based Devices	300
9.4.1	FET Devices	301
9.4.1.1	Electronic Transport Mechanism	301
9.4.1.2	Device Structure of Graphene FETs	302
9.4.1.3	Graphene Nanoribbon FETs	304
9.4.1.4	Application of Graphene FETs	305
9.4.2	Type I Two-Terminal Devices	314
9.4.3	Type II Two-Terminal Devices	316
9.4.4	Graphene Nanoelectromechanical Systems	321
9.5	Future of Graphene-Based Devices	324
	References	325
	Index	329
