

Contents

Preface	<i>ix</i>
About the Author	<i>xi</i>
Acknowledgments	<i>xiii</i>
1	Survey of Challenges in Chemistry and Materials Science Research 1
1.1	Introduction 1
1.2	Energy Form 2
1.2.1	Steam Power 2
1.2.2	Electricity Power 4
1.2.3	Other Energy Forms 8
1.3	Data 11
	References 19
2	Robots Technology Development in Modern Scientific Research 21
2.1	Introduction 21
2.2	Early Development of Laboratory Automation (Before 2000) 22
2.2.1	Early Automation Technologies 22
2.2.2	Laying the Foundation for AI and Robotics 29
2.3	Preliminary Integration and Development of Laboratory Automation (2000–2019) 31
2.3.1	Automation Technologies (2000–2010) 31
2.3.2	Various Forms of Exploration Based on Established Foundations 41
2.4	Latest Developments and Current Trends (2020–2023) 42
2.4.1	Automation Technologies in Five Years 42
2.4.2	Mature Industrialization as well as In-depth Exploration 50
2.5	Outlook on Future Development 52
2.6	Conclusion 54
	References 55

3	AI Algorithm for Chemical and Bio-material Design	57
3.1	Introduction	57
3.2	Molecular Representation and Encoding	58
3.2.1	Linear Notations for Molecules	58
3.2.2	Graph Representations for Molecules	63
3.3	The Formulation of Accessible and Searchable Data	66
3.3.1	Traditional Way for Molecular Structure–Property Relationship Determination: The Kohn–Sham Equation	66
3.3.2	Dataset Preprocessing	68
3.3.3	Current Existing Dataset	69
3.4	AI for Molecular Structure–Property Relationship	71
3.4.1	The Deep Learning Technology	72
3.4.2	AI Solving the Kohn–Sham Equation	75
3.5	AI for Chemical and Bio-material Design	78
3.5.1	Design Workflows	78
3.5.2	Example of Designed Chemical and Bio-materials	79
	References	81
4	Autonomous Laboratory Empowered by AI and Robotics	85
4.1	Evolution of Laboratory	85
4.2	Core Technologies in Autonomous Laboratories	85
4.2.1	Autonomous Laboratory Components	85
4.2.2	Reinforcement Learning	89
4.3	Example Autonomous Laboratory Solution	90
4.3.1	Automatic Device only Solution	90
4.3.2	Solution that Including Design and React	91
4.3.3	Solution in Reaction Optimization	92
4.3.4	Solutions Contain Full Phases	94
4.4	Advanced Autonomous Laboratory Solutions	98
4.4.1	Advanced Experimental Data Analysis Methods	98
4.4.2	Design and Analysis in the Large Model Era	104
4.4.3	Experiment Visualization	106
4.5	Future Prospects and Trends	108
	References	110
5	Large Language Models for the Autonomous Material Research	113
5.1	Review of Large Language Models Development and Applications	113
5.2	Fundamentals of LLM for Material Research: Database and Knowledge Base Construction	121
5.3	Evaluation: Spider Matrix	124
5.4	Ideation: AI Supervisor and ScholarNet	130
5.5	Results and Discussion	134
5.6	Conclusion	136
	References	136

6	Toward a Blockchain-Powered Anti-Counterfeiting Experimental Data System in an Autonomous Laboratory	139
6.1	Blockchain Technology	139
6.2	Laboratory Chemical Management and Safety	143
6.3	The Problem of Data Integrity and Counterfeiting in Scientific Research	145
6.4	Blockchain in the Autonomous Laboratory	150
6.5	Symbolic Representation of Experiments	155
6.6	Challenges and Limitations	157
6.6.1	Standard Compilation for Experiment Methods	157
6.6.2	High Cost for PoW and PoS	158
6.6.2.1	Data Storage Safety	158
6.7	Conclusion	159
	References	160
7	The Future Integrated Computational and Experimental Research in Metaverse	163
7.1	Introduction of Metaverse	163
7.1.1	Industry 5.0 Protocol	163
7.1.2	Current Development of Metaverse	164
7.1.3	Human-in-Loop Paradigm	165
7.2	Research Paradigm in Metaverse	165
7.3	Autonomous High-Throughput Experiments	166
7.3.1	Theory Driven by AI	168
7.3.2	HIL Implementation	169
7.3.3	AI Prediction	171
7.4	H ₂ O Phase Research in Metaverse	172
7.5	Aqueous System Research in Metaverse	176
7.6	Challenges and Future Directions	182
	References	182
	Index	187
