

Contents

	About the Authors	<i>xiii</i>
	Preface	<i>xv</i>
	Nomenclature	<i>xvii</i>
1	Setting the Energy Scene	1
1.1	Introduction	1
1.2	Energy Carriers	5
1.2.1	Solar Energy	5
1.2.2	Wind Energy	6
1.2.3	Hydropower	7
1.2.4	Chemical Energy Carriers	8
1.2.5	Nuclear Energy	11
1.3	Current Usage of Energy Carriers	12
1.3.1	Interconversion of Energy Carriers	14
1.4	Outlook	17
	References	21
2	Power Generation – Harnessing Renewable Energy	25
2.1	Introduction	25
2.2	Thermal Power Generation Processes	28
2.2.1	Rankine Cycle	28
2.2.2	Brayton Cycle	31
2.2.3	Environmental Aspects	33
2.2.3.1	Carbon Capture	34
2.2.3.2	Desulphurisation	37
2.2.3.3	DeNO _x	38
2.3	Power Generation from Geothermal Energy	39
2.3.1	Principle	39
2.3.2	Efficiency	40
2.3.3	Installations	41
2.3.4	Environmental Aspects of Geothermal Power	41
2.4	Hydropower	42

2.4.1	Principle	42
2.4.2	Efficiency	43
2.4.3	Installations	45
2.4.4	Environmental Aspects of Hydropower	46
2.5	Wind Energy	46
2.5.1	Principle	47
2.5.2	Efficiency	47
2.5.2.1	Efficiency of a Wind Park	50
2.5.3	Installations	51
2.5.4	Environmental Aspects of Harnessing Wind Energy	52
2.6	Solar Power	53
2.6.1	PhotoVoltaics	54
2.6.1.1	Principle	54
2.6.1.2	Efficiency of Converting Solar Light into Power	56
2.6.1.3	Installations	59
2.6.2	Concentrated Solar Power (CSP)	60
2.6.2.1	Principle	60
2.6.2.2	Efficiency of Converting Solar Light into Heat	64
2.6.2.3	Installations	66
2.6.3	Environmental Aspects of Harnessing Solar Energy Using PV or CSP	68
2.7	The Grid	69
2.8	Outlook	71
	References	74
3	Dealing with Intermittency – Storing Electric Power	85
3.1	Introduction	85
3.2	Pumped Hydro-Energy Storage (PHES)	86
3.3	Compressed Air Energy Storage (CAES)	88
3.3.1	Liquid Air Energy Storage (LAES)	93
3.4	Flywheel	94
3.5	Batteries	95
3.5.1	Principle	95
3.5.2	Lead-Acid Battery	100
3.5.3	Lithium-Ion Batteries	105
3.5.4	Alternatives to LiCoO ₂	108
3.5.5	Solid-State Batteries	111
3.6	Flow Batteries	111
3.6.1	Electrolytes	113
3.6.2	Membranes	116
3.6.3	Electrodes	117
3.6.4	Design Considerations for Flow Batteries	118
3.7	Supercapacitors	119
3.8	Outlook	121
	References	126

4	Heating	135
4.1	Introduction	135
4.2	Heat Pumps	139
4.2.1	Chemical Heat Pump	145
4.3	Resistive Heaters	146
4.4	Furnaces	151
4.4.1	Combustion Furnace	152
4.4.2	Electric Furnace	162
4.4.2.1	Resistive Furnace	162
4.4.2.2	Microwave Furnace	163
4.4.2.3	Induction Furnace	167
4.4.2.4	Electric Arc Furnace (EAF)	169
4.5	Heat Integration	170
4.5.1	Pinch Analysis	171
4.5.2	The Future of Heat Integration	173
4.6	Heat Storage	174
4.7	Outlook	177
	References	178
5	Chemical Storage of Energy	189
5.1	Power-to-X Concept	189
5.2	Hydrogen as an Energy Carrier	190
5.2.1	Hydrogen Production	191
5.2.1.1	Coal Gasification	193
5.2.1.2	Methane Reforming	200
5.2.1.3	Water Electrolysis	205
5.2.1.4	Hydrogen from Photocatalytic Water Splitting	214
5.2.2	Efficiency of Hydrogen Production	216
5.2.3	Cost of Hydrogen Production	223
5.2.4	Hydrogen Storage and Transport	227
5.2.4.1	Hydrogen Transport Through Pipelines	229
5.2.4.2	Liquefying Hydrogen	230
5.2.4.3	Need for Hydrogen Carriers	232
5.2.5	Extracting Energy from Hydrogen	233
5.2.5.1	Hydrogen Combustion	233
5.2.5.2	Fuel Cells	233
5.3	Ammonia	236
5.3.1	Uses for Ammonia	236
5.3.2	Ammonia as a Hydrogen Carrier	237
5.3.3	Ammonia Production Process	238
5.3.3.1	Thermodynamic Limitations of Ammonia Synthesis	238
5.3.3.2	Catalysts for Ammonia Synthesis	239
5.3.4	Classical Ammonia Synthesis Route	240
5.3.4.1	CO ₂ Emissions	244
5.3.5	Efficiency of Ammonia Synthesis	244

5.3.6	Alternative Routes for Ammonia Synthesis	245
5.3.6.1	Production of Ammonia Using Renewable Hydrogen	246
5.3.6.2	CO ₂ Emissions from Renewable Ammonia Production	248
5.3.6.3	Energy Requirement for Production of Renewable Ammonia	248
5.3.7	Power from Ammonia	249
5.3.7.1	Energy Recovery Through Ammonia Combustion	249
5.3.7.2	Electrochemical Combustion of Ammonia	253
5.3.7.3	Conversion of Ammonia Back to Hydrogen	253
5.3.7.4	Efficiency Ammonia as a Hydrogen/Energy Carrier	255
5.4	Liquid Organic Hydrogen Carriers – LOHCs	257
5.4.1	Methylcyclohexane-Toluene-Hydrogen	258
5.4.2	Dibenzyl Toluene to Perhydro-Dibenzyl Toluene	261
5.4.2.1	Catalysts and Reaction Conditions	262
5.5	Methanol and Dimethyl Ether	264
5.5.1	Uses of Methanol and Dimethyl Ether	265
5.5.2	Methanol Synthesis Reactions and Equilibrium	266
5.5.3	Methanol Synthesis Catalyst	267
5.5.3.1	Methanol Production	268
5.5.4	Methanol from CO ₂	269
5.5.5	Methanol from Renewable Hydrogen	270
5.5.6	Dimethyl Ether Production	271
5.5.7	Uses of Methanol and Dimethyl Ether	271
5.5.7.1	Methanol/Dimethyl Ether Combustion	271
5.5.7.2	Direct Methanol Fuel Cell (DMFC)	272
5.5.7.3	Methanol/Dimethyl Ether as Feedstock for Fuel Production	273
5.5.7.4	Conversion of Methanol/Dimethyl Ether Back to Hydrogen	273
5.6	Hydrocarbons to Store Energy	274
5.6.1	Fischer-Tropsch Synthesis	275
5.6.1.1	FT catalysts	276
5.6.1.2	Reactions in the Fischer-Tropsch Synthesis	277
5.6.1.3	FT Reaction Kinetics	278
5.6.1.4	Product Distribution in the Fischer-Tropsch Synthesis	279
5.6.1.5	Process and Reactor Considerations	282
5.6.2	CO ₂ -Hydrogenation	282
5.6.2.1	Limitations in the Direct CO ₂ -Hydrogenation to Hydrocarbons	283
5.6.3	FT Process Cost and Efficiency	284
5.7	Outlook	285
	References	289
6	Basic Industries	305
6.1	Introduction to the Basic Industries	305
6.2	Cement	307
6.2.1	Material Specification for Cement and Concrete	307
6.2.2	Industry Size	308
6.2.3	Production of Cement	310

6.2.3.1	Process Description	310
6.2.3.2	Energy Demand in the Production of Cement	313
6.2.3.3	CO ₂ Production in Cement Manufacture	314
6.2.4	Reducing CO ₂ Emissions from Cement/Concrete	316
6.2.5	Current Research Around Future Processes	317
6.2.5.1	Making Cement More Sustainable	318
6.2.5.2	Cement Replacements	319
6.2.5.3	Calcium Looping	320
6.2.5.4	Oxy-fuel	320
6.2.5.5	Potential Additional Systems for CO ₂ Capture	320
6.2.5.6	Using Alternative Fuels	322
6.2.6	Outlook	324
6.3	Steel	325
6.3.1	Material Specification	325
6.3.2	Iron and Steel Industry	330
6.3.3	Current Process(es)	333
6.3.3.1	Overall Process	333
6.3.3.2	Coke Production	334
6.3.3.3	Iron Production – The Blast Furnace	334
6.3.3.4	Basic Oxygen Steel-Making	341
6.3.3.5	Electric Arc Furnace	343
6.3.4	Reducing Emissions in Steel Manufacturing	344
6.3.4.1	Potential for Recycle	344
6.3.4.2	Alternative Reductants	344
6.3.4.3	High-Temperature Heat	346
6.3.4.4	Carbon Capture and Utilisation	347
6.3.5	Outlook	347
6.4	Sulphuric Acid	349
6.4.1	Material Specifications	349
6.4.2	Size and Production Scale in Sulphuric Acid Production	349
6.4.3	Sulphuric Acid Production Process	350
6.4.4	Making Production of Sulphuric Acid More Sustainable	354
6.4.4.1	Regeneration of Spent Acid Waste	356
6.4.5	Outlook	357
6.5	Sodium Hydroxide and Hydrochloric Acid – The Chlor-Alkali Process	358
6.5.1	Introduction to Material and Industry	358
6.5.2	The Chlor-Alkali Process	359
6.5.2.1	Raw Materials	361
6.5.2.2	Process Flow Diagram	361
6.5.2.3	The Diaphragm Cell	361
6.5.2.4	The Mercury Cell	364
6.5.2.5	The Membrane Cell	365
6.5.2.6	Oxygen-Depolarised Cathode (ODC) Cell	366
6.5.3	Outlook	366

6.6	General Outlook for the Basic Industries	367
	References	369
7	Manufacture of Materials	385
7.1	Introduction	385
7.2	Aluminium	387
7.2.1	Material Specification	388
7.2.2	Aluminium Industry	389
7.2.3	Current Process	391
7.2.3.1	Bayer Process – Alumina Production	391
7.2.3.2	Hall-Hérault Process – Aluminium Production	394
7.2.4	Recycling Aluminium	396
7.2.5	More Sustainable Aluminium Production	396
7.2.6	Outlook	397
7.3	Copper	398
7.3.1	Material Specification	398
7.3.2	Copper Industry	399
7.3.3	Current Processes	400
7.3.3.1	The Pyrometallurgical Route	401
7.3.3.2	The Hydrometallurgical Route	403
7.3.4	Potential for Recycle	404
7.3.5	Carbon Emissions from Copper Production	406
7.3.6	Copper Production Using Renewable Energy	407
7.3.7	Current Research Around Future Processes	409
7.3.8	Outlook	409
7.4	Titanium and Titania	410
7.4.1	Titanium Industry	411
7.4.2	Current Processes	412
7.4.2.1	Production of Pigment-Grade Titania	412
7.4.2.2	Production of Titanium Using the Kroll Process	415
7.4.3	Recycle	416
7.4.4	Implementation of Renewable Energy in the Production of Titania/Titanium	416
7.4.5	Future Processes to Produce Titania and Titanium	417
7.4.6	Outlook	418
7.5	Silicon	418
7.5.1	Material Specifications	419
7.5.2	Silicon Industry	420
7.5.3	Current Processes	422
7.5.3.1	Production of Metallurgical-Grade Silicon and Ferrosilicon	423
7.5.3.2	Production of Polycrystalline Silicon	425
7.5.3.3	Silicon as a Feedstock for the Chemical Industry	428
7.5.4	Direct Greenhouse Gas Emissions from the Production of Silicon	429
7.5.5	Potential for Recycle	431
7.5.6	Making Silicon Production More Sustainable	431

7.5.7	Current Research Around Future Processes	432
7.5.8	Outlook	433
7.6	Glass	434
7.6.1	Introduction to Glass and Its Industry	435
7.6.2	Current Process	437
7.6.3	Energy Requirement and Carbon Emissions	441
7.6.4	Potential for Recycle	442
7.6.5	Making Glass Manufacture More Sustainable	443
7.6.6	Current Research Around Future Processes	444
7.6.7	Outlook	445
7.7	Paper and Pulp Manufacturing	446
7.7.1	Introduction to Paper and Pulp and Its Industry	446
7.7.2	Current Processes	449
7.7.3	Energy Usage and Generation	454
7.7.4	Water Usage	455
7.7.5	Emissions	455
7.7.6	Making the Pulp and Paper Industry More Sustainable	457
7.7.7	Current Research Around Future Processes	457
7.7.8	Outlook for the Paper and Pulp Industry	458
7.8	Outlook for Industrial Manufacture of Materials	459
	References	463
8	Consumer Goods Industries	483
8.1	Overview of Consumer Goods Industries	483
8.2	Industrial Baking	486
8.2.1	Introduction	486
8.2.1.1	Industry Size	487
8.2.2	Raw Materials and Process Steps	489
8.2.3	Carbon Footprint of Breadmaking	492
8.2.4	Renewable Energy in Breadmaking	494
8.2.5	Current Research Around Future Processes	495
8.2.6	Outlook	495
8.3	Canning and Related Processes	496
8.3.1	Current Processes	498
8.3.1.1	Overall Process	498
8.3.1.2	Retorting – A Batch Process	499
8.3.1.3	Pasteurising – A Continuous Process	501
8.3.2	Implementation of Renewable Energy in Thermal Food Processing	502
8.3.3	Recycling of Packaging Materials	503
8.3.4	Outlook	504
8.4	Pharmaceutical Drugs	504
8.4.1	Current Process	505
8.4.2	Energy Consumption in the Pharmaceutical Industry	508
8.4.2.1	Research and Development	509

8.4.3	Life Cycle Analysis of the Pharmaceutical Industry	510
8.4.4	Making the Pharmaceutical Industry More Sustainable	512
8.4.4.1	Green Chemistry	512
8.4.4.2	Continuous Processing	513
8.4.4.3	Potential for Recycle	514
8.4.4.4	Solar Thermal Systems	515
8.4.5	Current Research Around Future Processes	515
8.4.6	Outlook for the Manufacture of Pharmaceutical Drugs	515
8.5	Wastewater Treatment	516
8.5.1	Wastewater Treatment	518
8.5.2	Sewage Sludge	522
8.5.2.1	Combustion and Incineration	524
8.5.2.2	Pyrolysis	524
8.5.2.3	Anaerobic Digestion	524
8.5.2.4	Wastewater and Sludge to Fertiliser and Irrigation	525
8.5.2.5	Energy Generation from Sludge	526
8.5.3	Outlook	529
8.6	Outlook for Energy in the Consumer Goods Industry	529
