Contents

Author Biography *ix*
Preface *xi*
Acknowledgments *xiii*

1 General Background of Carbon Materials *1*
1.1 Carbon Allotrope *1*
1.1.1 sp^3-Carbon Allotropes *1*
1.1.2 sp^2-Carbon Allotropes *1*
1.1.3 *sp*-Carbon Allotropes *6*
1.1.4 Carbon Allotropes Consisting of Multiple Carbon Hybridization States *6*
1.2 Synthesis of sp^2-Based Carbon Allotropes *7*
1.2.1 Solid-Phase Carbonization *8*
1.2.2 Liquid-Phase Carbonization *9*
1.2.3 Gas-Phase Carbonization *10*
References *11*

2 Graphene and Related Materials *15*
2.1 Graphene *15*
2.1.1 Definitions of Graphene and Related Materials *15*
2.1.1.1 Graphene *15*
2.1.1.2 Graphene Layer *16*
2.1.1.3 Bilayer, Few-Layer, and Multilayer Graphene *16*
2.1.1.4 Turbostratic Carbons *16*
2.1.1.5 Graphite *17*
2.1.2 Structural Characterization of Graphene and Graphene-Based 3D Carbon Materials *17*
2.2 Synthesis of Graphene-Based Materials *24*
2.2.1 Top-Down Methods *25*
2.2.2 Bottom-Up Methods *26*
2.3 Commercial Graphene Products *29*
2.4 Application of Graphene-Based Materials *31*
2.4.1 Applications of Monolayer Graphene *31*

2.4.1.1 Field-Effect Transistors *31*
2.4.1.2 Transparent Conductive Electrodes *32*
2.4.1.3 Biological Sensors *32*
2.4.2 Applications of Few-Layer Graphene *32*
2.4.3 Applications Suitable for Various Graphene-Based Materials *33*
2.5 Limitations of 2D Graphene and the Need for 3D Architectures *34*
References *34*

3 3D Carbon Materials *39*
3.1 Geometric Considerations Toward 3D Graphene Materials *39*
3.2 Plausible Advantages of 3D Graphene *42*
3.3 Synthetic Strategies Toward 3D Graphene Materials *46*
3.3.1 Top-Down Methods *47*
3.3.2 Conversion Methods *47*
3.3.3 Bottom-Up Methods *49*
3.3.3.1 Graphene Oxide–Based Synthesis *49*
3.3.3.2 Molecular Fragment–Based Bottom-Up Synthesis *58*
3.3.3.3 Epitaxial Synthesis *59*
3.4 Templated Synthesis *60*
3.4.1 Zeolite-Templated Synthesis *63*
3.4.2 3D Metal Templated Synthesis *72*
3.4.3 Oxide Ceramic Templated Synthesis *75*
3.5 Remaining Challenges and Outlook *76*
References *77*

4 Structural Evaluation of Graphene-Based 3D Materials *93*
4.1 Defects *94*
4.2 Edge Site Analysis by HT-TPD *94*
4.3 Domain Size *97*
4.4 Stacking Number *99*
4.5 Topological Defect Analysis *101*
References *102*

5 Graphene Mesosponge – A Genuine 3D Graphene *103*
5.1 Definition *103*
5.2 Development History *105*
5.3 Synthesis *108*
5.3.1 Template *108*
5.3.2 Chemical Vapor Deposition *111*
5.3.3 Template Removal *115*
5.3.4 Zipping Reactions *118*
5.4 Structure *122*
5.4.1 Porous Texture *123*
5.4.2 Pore Wall and Stacking Number *123*
5.4.3 Edge Sites *125*

5.4.4 Domain Size *126*
5.4.5 Topological Defects *127*
5.4.6 Heteroatom Doping *132*
5.4.7 Bulk Shape *134*
5.5 Intermediates *136*
5.5.1 Carbon-Coated Template *136*
5.5.2 Carbon Mesosponge *138*
5.6 Comprehensive Discussion of GMS Properties *139*
5.6.1 Adsorption Behavior *139*
5.6.2 Electric Conductivity *141*
5.6.3 Chemical Stability *142*
5.6.4 Elasticity *146*
5.6.5 Electrochemical Capacitance *150*
5.6.6 Magnetism *154*
5.7 Summary and Outlook *157*
References *158*

6 Applications *167*
6.1 Catalyst Supports *167*
6.2 Supercapacitors *171*
6.2.1 Background *171*
6.2.2 GMS in Supercapacitors *175*
6.2.3 Conclusion and Perspective *179*
6.3 Li-S Batteries *180*
6.4 Li-O_2 Batteries *183*
6.4.1 Carbon Materials in Li-O_2 Batteries *183*
6.4.2 GMS in Li-O_2 Batteries *185*
6.4.3 Summary and Perspective *194*
6.5 Fuel Cells *194*
6.6 Li-Ion Batteries *197*
6.7 New Type of Heat Pumps *199*
6.8 Biosensors *203*
6.9 Summary and Perspective *204*
References *205*

7 Conclusive Remarks and Perspective *213*

Index *217*
