

## Contents

- Preface** *ix*  
**List of Abbreviations** *xi*
- 1 Introduce of Triplet Excited State in DNA and RNA** *1*  
*Yanyan Jia and Jinqun Chen*
- 1.1 Introduction of the Significance of Triplet Excited State in Nucleic Acids *1*
- 1.2 Triplet Excited State Studies in the 1960–1970s with Low Temperature Spectroscopy *3*
- 1.2.1 Phosphorescence in Dinucleotides and Polynucleotides in 1960–1970s *6*
- 1.2.2 The Understanding of Temperature Effect on Triplet Excited State Formation and Decay During 1960s–1970s *8*
- 1.3 Breakthroughs of Time-Resolved Spectroscopy Techniques and Progress of Triplet Excited State Study of DNA/RNA in 1980–2000 *9*
- 1.4 Current Research Frontiers (2000s–Present) *10*
- 1.4.1 Ultrafast Spectroscopy Study *10*
- 1.4.2 Theoretical Study *12*
- 1.4.3 Study on the Reaction Mechanism of Cyclobutane Pyrimidine Dimer (CPD) Photolesions in DNA/RNA *13*
- 1.5 Book Structure Overview *14*  
Acknowledgments *15*  
References *15*
- 2 Triplet Excited State in Canonical Nucleobases and Their Derivatives** *23*  
*Jing Li, Yanyan Jia, and Jinqun Chen*
- 2.1 Study on the Triplet Excited States Dynamics of Canonical Nucleobases by Laser Flash Photolysis and Femtosecond Transient Absorption Spectroscopy *23*
- 2.1.1 Early Research Foundation *23*

2.1.2	In-Depth Research Promoted by Time-Resolved Spectroscopy Techniques	25
2.1.2.1	Thy Monomer	25
2.1.2.2	Uracil Monomer	27
2.1.2.3	Cytosine Monomer	28
2.1.3	Summary	30
2.2	Study on Triplet Excited State Dynamics of Thio- and Selenium-Substituted Nucleobases	34
2.2.1	Thio-Substituted Pyrimidine Bases	34
2.2.2	Sulfur-Substituted Purine Bases	39
2.2.3	Selenium-Substituted Nucleobases	40
2.2.4	Summary	41
2.3	Study on Triplet Excited State Dynamics of Nitrogen-Substituted Nucleobases	51
2.3.1	Nitrogen-Substituted Pyrimidine Bases	51
2.3.1.1	Azathymine and Its Derivatives	51
2.3.1.2	Azaauracil and Its Derivatives	52
2.3.1.3	Azacytosine	53
2.3.2	Nitrogen-Substituted Purine Bases	54
2.3.3	Summary	55
	References	59
<b>3</b>	<b>Decoding Triplet State Dynamics in Epigenetically Modified DNA and RNA: Photophysical Mechanisms from Nucleobase Monomers to Duplex</b>	<b>65</b>
	<i>Lina Wang and Xueli Wang</i>	
3.1	Introduction	65
3.2	Formation of Triplet State in Epigenetically Modified Nucleobase Monomer	65
3.2.1	Cytosine C5-Modified Nucleobases	65
3.2.2	Cytosine C5-Methylation	68
3.2.3	Cytosine C5-Demethylation	68
3.2.4	Cytosine C5-Halogen	70
3.2.5	Cytosine N5-Modification	71
3.3	Uracil C5-Modified Nucleobases	72
3.4	Adenine N6-Modified Nucleobases	73
3.4.1	Adenine N6-Methylation	73
3.4.2	Adenine N6-Demethylation	75
3.5	Guanosine N7-Modified Nucleobases	76
3.6	Formation of Triplet State in Epigenetically Modified Dinucleotides and Single-Stranded Oligomers	77
3.7	Formation of Triplet State in Epigenetically Modified DNA Duplex	80
3.8	Conclusion	81
	References	83

- 4 Triplet-Mediated Photochemistry of Nucleic Acid Bases 89**  
*Di Song, Shuyi Yan, and Hongmei Su*
- 4.1 Introduction 89
- 4.2 Photoaddition Reactions 91
- 4.3 Photo-oxidation Reactions 101
- 4.4 Photo-Crosslinking Reactions 110
- 4.5 Conclusions 114
- References 114
- 5 Drug-Sensitized Triplet States Generation in DNA 123**  
*Carlos Montero-Galán, Gemma M. Rodríguez-Muñiz, and Virginie Lhiaubet-Vallet*
- 5.1 Introduction 123
- 5.2 The Triplet-Triplet Energy Transfer Process 126
- 5.3 The Triplet Energy of Nucleobases 127
- 5.4 Photoproducts Arising from the Nucleobase Triplet Excited State 129
- 5.5 Methodologies: Spectroscopic vs Analytical Techniques for Detection of Drug Photosensitization of  $^3\text{N}^*$  137
- 5.5.1 Direct Detection: Spectroscopic Techniques 137
- 5.5.2 Indirect Detection: Analytical Techniques 138
- 5.5.2.1 CPD Detection in Nucleosides and/or Nucleotides 138
- 5.5.2.2 CPD Detection in Isolated DNA or Oligonucleotides 138
- 5.5.2.3 CPD Detection in Cellular DNA 139
- 5.6 Photosensitization of Nucleobase Triplet by Drugs (or Cosmetics) 140
- 5.6.1 Pyridopsoralen Derivatives 140
- 5.6.2 Nonsteroidal Anti-inflammatory Drugs 142
- 5.6.3 Fluoroquinolones 143
- 5.6.4 Other Drugs and Cosmetic Agents 144
- 5.7 Conclusion 145
- References 146
- 6 Triplet Decay in Canonical and Noncanonical DNA/RNA Nucleobases 155**  
*Siman Chen, Yuhsuan Lee, and Shuming Bai*
- 6.1 Introduction 155
- 6.2 Low Triplet Yields in Natural DNA/RNA Nucleobases 156
- 6.3 Triplet Decay in Thionucleobases 157
- 6.4 Theoretical and Computational Studies of Triplet Decay of Thionucleobases 159
- 6.5 Mechanisms of Chemical Modulation of Triplet Decay 162
- 6.6 Remaining Challenges and Future Directions 165
- References 167

**7 Triplet State Dynamics in DNA/RNA Nucleobases and DNA by Ab Initio Static and Surface-Hopping Dynamics Simulations 173***Marta Ibanez-deLuis and Inés Corral*

- 7.1 Introduction 173
- 7.2 Adenine 176
- 7.3 Guanine 179
- 7.4 Uracil 181
- 7.5 Thymine 185
- 7.6 Cytosine 188
- 7.7 Nonnatural Nucleobases 191
  - 7.7.1 Thionucleobases 192
    - 7.7.1.1 6-Thioguanine 192
    - 7.7.1.2 2-Thiocytosine 193
    - 7.7.1.3 2-Thiouracil and 2-Thiothymine 194
    - 7.7.1.4 4-Thiouracil and 4-Thiothymine 195
    - 7.7.1.5 2,4-Dithiouracil and 2,4-Dithiothymine 196
  - 7.7.2 Purine and Pyrimidine 196
- 7.8 Pyrimidine–Pyrimidine Dimer Formation Processes 198
  - 7.8.1 Cyclobutane Pyrimidine Dimers 198
  - 7.8.2 (6-4) Photoadduct Formation 200
- 7.9 Conclusions 202
- References 203

**8 The Photophysics and Photochemistry of Epigenetics and “Natural” Noncanonical Bases: Insights from Quantum Mechanical Calculations 211***Lara Martínez-Fernández and Roberto Improta*

- 8.1 Introduction 211
- 8.2 Epigenetic Bases 213
  - 8.2.1 Cytosine Derivatives 213
    - 8.2.1.1 5-Methyl-Cytosine 213
    - 8.2.1.2 5-Formyl-Cytosine 216
    - 8.2.1.3 5-Hydroxymethyl-Cytosine 217
    - 8.2.1.4 5-Carboxyl-Cytosine 218
  - 8.3 Methylated Purines 218
    - 8.3.1 Natural Derivatives 219
      - 8.3.1.1 8-Oxoguanine 219
    - 8.3.2 Etheno G/C 222
- 8.4 Concluding Remarks 224
- Acknowledgments 225
- References 225
