

Index

a

acrylic-based hydrogels and aerogels 41–42
 acrylic fiber-based hydrogels 71–73
 adaptive clothing systems 176–177
 advanced cushioning system 103–104
 aerogel-based functional accessories
 belts and straps 100
 eyewear 100
 jewelry 100
 smart and responsive biodegradable accessories 101
 3D printed aerogel accessories 100
 aerogel-elastomer composites 100
 aerogel fabrics 227
 aerogel-infused nonwovens 196
 aerogel materials 160–162
 aerogel polyester chip 40, 41
 aerogels 3
 preparation, sol-gel process 16–17
 aerogels, defined 35
 aerogel synthesis 161, 201
 aerogel textile composites 22, 202–203
 aerogel textile innovations 223
 aerogel textile integration techniques 166–167, 201–202
 aerogel-textile wound dressings
 alginate aerogels 118
 coating techniques 119
 fiber-based aerogels and integration 119
 in-situ sol-gel synthesis-textile impregnation 119

 natural biopolymers 117
 organic (polymeric) 117
 particle integration/embedding 119
 AeroSF 39
 alcogels 17, 201
 alginate aerogels 118
 drying methods 20
 alginate hydrogels 13, 99
 alumina aerogels 189
 aluminum hydroxide aerogel 22
 ambient pressure drying 18, 19, 142, 201
 animal-derived polymers 228
 animal fiber-derived biopolymers
 advantages 136
 historical development 136–137
 antibacterial properties 86–87
 antibiotics properties 86
 aramid nanofibers (ANF) 199
 Aspen Aerogels 23
 AT-PTR (aerogel-functionalized textile passive thermal regulator) 83
 AZM-SS/PVA hydrogel 44

b

bacterial cellulose/chitosan hybrids 200
 ballistic-resistant textiles 193–194
 belts and straps 100
 bio-based plant 228
 bio-based textiles 90
 biocompatibility
 and cytotoxicity 144–145
 sustainability and 177–179
 testing 214–215

biodegradability 89–90
 biodegradable fashion accessories
 aerogel-based functional accessories 100
 challenges in 98
 hydrogel-based leather alternatives 98–99
 bio-intelligent hydrogels 105
 biomaterials' biodegradability 144
 biomedical applications 146–149
 biopolymer aerogels 17
 biosensors, and diagnostic devices 148
 blended-fiber hydrogels and aerogels 73–74
 blended hydrogels and aerogels 42–43
 composite textile substrates 45–46
 natural-synthetic blends 43–44
 boron nitride (BN) aerogels 190

C

carbide-based aerogels 190
 carbon aerogels 127, 161
 carbon nanotube (CNT) 172
 carbothermal reduction 190
 carboxymethyl cellulose (CMC) 38, 60
 cellulose aerogel pads 215
 cellulose aerogels 118, 191
 cellulose-based aerogels 62
 cellulose-based hydrogel composites 86
 cellulose-based hydrogels 58
 with Ag/AgCl nanoparticles 21
 cellulose-based superabsorbents 38
 cellulose nanocrystals (CNCs) 44
 cellulose nanofiber aerogels 20
 cellulose nanofibril (CNF) 172
 cellulose possesses 57
 cellulose-PVA hydrogels and aerogels 43–44
 chemical cross-linkers 215
 chemical cross-linking 135, 140
 chemical grafting 165
 chemically crosslinked hydrogels 15–16
 chemical protection 195–197
 aerogels of 192–193
 chemical stimuli 175–176
 chitosan aerogel fibers 23
 chitosan (CS)-based aerogels 191
 chitosan-based hydrogels (CS-Gels) 178
 chitosan-gelatin composite films 145
 circular economy 228
 closed-loop recycling 103
 collagen extraction 139–140
 composite aerogels 16
 composite textile substrates
 functional coatings 45–46
 laminated/coated fabrics 45
 conductive aerogels 169
 conductive aerogels and hydrogels
 electrical and electrochemical properties 170–171
 e-textiles, applications for 171–173
 material design and composites 167–170
 consumer acceptance 215–216
 consumer education 215–216
 conventional textiles, characterization of 2
 cotton-based hydrogels
 aqueous solution hydrogels 58
 CMC solutions 61
 microcrystalline cellulose 58–59
 succinic acid 60
 cotton-based hydrogels and aerogels 37–38
 cotton cellulose 37
 cotton fiber reinforced poly(vinyl) alcohol hydrogel composite 21
 cotton waste 38
 covalent crosslinking 15
 cross-linked hydrogels of self-healing poly(acrylamide) clay 42
 crosslinking agents 191
 crosslinking, and network structure 145
 cross-linking method 3
 cryogels 19
 crystallization 14
 cytotoxicity, biocompatibility and 144–145

d

dextran-based hydrogels 15
dialdehyde sodium alginate 99
dip-coating methods 166
dip coating process 116
direct ink writing (DIW) 100
drug delivery systems 147
 wound dressings and applications
 aerogels for 121–122
 hydrogels for 121
drying technology comparison 141
dry-wet spinning technique 172

e

eco-friendly clothing 97–98
economic feasibility 216–218
electromagnetic interference (EMI)
 shielding 190
electron-conductive hydrogels 168
electrospinning 20, 116–117, 202
electrospraying 202
electrospun nanofiber layer 167
electrospun polyacrylonitrile (PAN) fibers
 167
environmental impact assessment
 210–211
environmentally friendly method 213
enzymatic degradation 144
epichlorohydrin (ECH) 61
e-textiles
 aerogel in 172–173
 hydrogel in 171–172
eyewear 100

f

fabrication techniques 55
fiber-based aerogels and integration 119
flame-resistant garments 198
flame-retardancy of textiles 87–89
fluorine-free silane monomer 164
free radical polymerization 15
freeze-drying 19, 61, 135, 141, 201
FTIR spectroscopy 145
functional textiles

antibiotics and antibacterial properties
 86
biodegradability 89–90
flame-retardancy 87–89
moisture management 82–84
thermal insulation 84–86

g

gelatin methacryloyl 200
gelation 17
gold nanoparticles (AuNPs) 176
graphene aerogels 192
graphene-impregnated aerogel 102
green chemistry 228

h

health-care textiles 55
hemostatic and antibacterial applications
 148
holocellulose nanofibrils/cellulose aerogel
 fibers (HCAFs) 90
hybrid alginate cryogels 19
hybrid silica-titania aerogel 22
hydrogel and aerogel
 characteristics of 136
 circular and regenerative product
 systems 225
 definition of 135, 136
 extreme environment and protective
 gear 225
 medical and healthcare textiles 224
 regulations and safety standards 225
 research 224
 sustainable apparel and eco-fashion
 224
hydrogel and aerogel-infused footwear
 advanced cushioning system 103–104
 application of 104
 environmental impact, conventional
 footwear 103
 moisture management and hygiene
 104
hydrogel-based composites 21
hydrogel-based leather alternatives
 98–99

hydrogel coating 164
 hydrogel/fabric composite flame-retardant material 22
 hydrogel integration methods 164
 hydrogel materials 158–160
 hydrogels 3, 35
 preparation 13
 hydrogels and aerogels
 collagen extraction 139–140
 current market landscape and clinical impact 137
 extraction and purification 138–140
 keratin extraction 138–139
 multidisciplinary convergence 137
 preparation and fabrication methods 138–142
 silk fibroin extraction 138
 hydrogel-textile composite wound dressings (HTCWD) 114, 115
 hydrogel-textile integration techniques 163–166
 hydrogel wound dressings
 dip coating process 116
 electrospinning 116–117
 in situ polymerization 115–116
 sol-gel process 116
 solvent casting 116
 hydrophobicity 196

i

impact resistance, aerogels of 192–197
 industrial by-products 211
 injectable hydrogels 148
 inorganic aerogels 189–190
 in situ-forming gels 148
 in situ incorporation 202
 in situ polymerization 115
 in situ sol-gel synthesis-textile impregnation 119
 in vivo testing 144
 ion-conductive hydrogels 168
 ionizing radiation 15

j

jewelry 100

k

kapok/polyester composite aerogel 70–71
 keratin 39–40
 keratin-derived aerogels 145
 keratin extraction 138–139
 from wool 66–67
 Kevlar safeguarding suit 197
 Knudsen effect 189

l

laboratory test methods 194–195
 laminated/coated fabrics 45
 lamination process 202
 lifecycle analysis 216–218
 lightweight protective gear 197–198
 lightweight thermal-insulating shear stiffening gel (LT-SSG) 197
 low density monolithic silica gels 19
 lyophilization 141

m

magnesia aerogels 189
 mechanical stability 143
 medical and healthcare textiles 224
 mesoporous microparticles 175
 metal aerogels 190
 microcrystalline cellulose 59
 moisture management 35, 36, 82–84
 and hygiene 104
 molybdenum carbide (MoC) aerogels 190
 multifunctional Kevlar safeguarding suit (MKSS) 197
 multiresponsive aerogels 200
 multi-step solvent exchange process 18

n

natural-fiber hydrogels and aerogels 37–40
 cotton 57–62
 cotton-based systems 37–38
 silk 62–66
 silk-based systems 39
 wool 66–68

wool-based materials 39–40
 natural hydrogels 12, 159
 natural material-based hydrogels 115
 natural polymer hydrogels 12, 37
 natural-synthetic blends
 cellulose-PVA 43–44
 silk-PLA 44
 wool-polyurethane 44
 N-carboxyethyl chitosan 176
 needle-punched nonwoven layer 167
 nitride based aerogels 190
 non-covalent interactions 214
 non-solvent phase separation 192
 North Face's Aerogel Trail GTX® boots
 104
 nylon-based hydrogels and aerogels 41

O

one-step solvent exchange process 18
 ophthalmic and dental applications 148
 organic aerogels 191–192
 organosoluble polyimide salt 174
 oxide-based aerogels 189

P

padding 166
 padding technique 201–202
 passive daytime radiative cooling (PDRC)
 192
 pectin aerogels 17
 personal thermal management (PTM)
 192
 phase-change hydrogels 101–102
 physical cross-linking 135, 140
 physically crosslinked hydrogels 13–15
 physical stimuli 173–175
 PLA-dextrin hydrogel 69
 plant-based hydrogels 96
 plant fiber-based hydrogels and aerogels
 future perspective 129
 properties and application areas of
 112–113
 smart bandages 124
 synthesis methods, properties,
 applications 112

plasma grafting 165
 poly(acrylamide) hydrogels 42
 poly(acrylic acid) hydrogels 42
 polyester-based hydrogels 68
 polyester-based hydrogels and aerogels
 40–41
 polyester (polyoligoglycerol maleate)
 based-hydrogel synthesis 68, 69
 polypyrrole (PPy) 168
 polyurea aerogels 191
 polyurethane (PU) aerogels 192
 polyvinyl alcohol (PVA) hydrogels 14
 polyvinyl alcohol tannic acid hydrogels
 (PVA-TA) 14
 porosity and pore size 143
 porous aerogel, heat transfer 188
 porous materials 227
 protective gear 225
 protective textiles 187, 198–200
 protic ionic liquid (PIL) 67

R

recycling 212
 reduced graphene oxide (RGO) 172
 repellency ability of aerogels 23
 resorcinol-formaldehyde (RF) aerogels
 17, 191
 resorcinol-to-catalyst (R/C) ratio 191
 resulting glyhydrogel textile dressing 21

S

self-assembly 14
 sensor applications 127–128
 shape memory alloys (SMAs) 177
 shape-memory polymer aerogels (SMPAs)
 200
 shear thickening fluid (STF) 194
 silica aerogels 16, 55, 189
 silica-polymer composites 161
 silicon carbide (SiC) aerogels 190
 silk-based hydrogels 63, 64
 silk fibroin 100
 silk fibroin extraction 138
 silk fibroin hydrogels 39
 silk-PLA hydrogels and aerogels 44
