 selected area electron diffraction (SAED) 255
 selective binder activation (SBA) 66
 selective paste intrusion (SPI) technique 69, 70
 selective powder deposition (SPD) recoater 174
 semiconductor industry 59, 96, 97, 301
 shear cells 250
 sheet lamination (SHL) 12, 275
 shorter process chain 297
 shrinkage and warpage 256

- sieve analysis 247
- silica-rich feedstocks 324
- silicate ceramics 72
- silicon carbide (SiC) 1, 4, 5, 71, 73, 76, 80, 88, 96, 97, 100, 112, 136, 160, 168, 169, 180, 184–186, 196, 224, 301
- silicon-infiltrated silicon carbide (SiSiC) material 71, 100
- siliconization 185
- single edge-notched beam (SENB) method 253
- sintering 8, 9, 12, 14, 17, 18, 25–27, 31–34, 38, 44, 63, 70, 72, 73, 76, 77, 88, 96, 98–100, 129–133, 135, 153, 154, 156, 157, 159, 160, 164, 165, 168, 176, 178, 182–184, 186, 195, 213–215, 218–220, 222–224, 227–229, 232, 243, 245, 247, 252, 253, 255–259, 270–275, 277, 279, 282, 300, 302, 304, 305, 312, 323–326, 328–331, 333, 334, 336, 337
- sintering step 133, 157
- size and complexity 296
- slurry composition 220
- slurry-based deposition 75
- solid oxide cells (SOCs) 17, 229, 295, 306–310
- Solidscape Inc. 86
- solid-state sintering 156
- static image analysis (SIA) 246
- stereolithography (SL) 10, 14, 17, 25, 27, 33, 215, 245, 255, 295, 307, 324–328, 335
- strain-controlled oscillatory shear experiments 117
- Stratasys 86
- structural ceramics 1, 3, 4, 12, 71, 286
- surface roughness 44, 164, 166, 172, 173, 180, 256, 272, 300, 303
- t**
- Taguchi method 82
- technology transfer 297, 317
- tensile strength tests 253
- tensile test 251
- theory of ink printability 59–62
- thermally induced phase separation (TIPS) 159
- thermal post-processing 70, 87, 88, 270, 286, 330
- thermal shock tests 281
- thermal stability 2, 3, 184, 186, 255, 296
- thermal treatment 27, 32–33, 42, 44, 76, 96, 127, 131, 134, 183, 187, 218, 229, 331
- thermogravimetric analysis (TGA) 204, 252
- thermomechanical analysis (TMA) 254
- thermomechanical characterization 254
- thermomechanical elasticity 254
- thermomechanical stability 17, 252, 254
- thermoplastic 3D printing (T3DP) 87, 226
- time of discharge method 249
- titanium carbide (TiC) 161, 197
- topology optimization 17, 244, 259
- traditional ceramics 1, 10, 62, 70, 112, 153, 198, 199, 301, 307, 315, 324
- transmission electron microscopy (TEM) 255
- triple act system 81
- tungsten carbide (WC) 4, 161, 164, 168, 171
- two-photon polymerization (TPP) 10, 41–43, 215, 245, 305
- U**
- ultra-high temperature ceramics (UHTCs) 18, 136, 197
- UV-assisted direct ink writing (UV-DIW) 212
- UV-assisted MEX 212–213
- UV-sensitive ceramic particles 27
- V**
- valve DOD inkjet printing (VIJ) method 58, 59
- vanadium pentoxide (V_2O_5) 229

- Vat photopolymerization (VPP) 10
 advantages and limits of 37–39
 AM hybridization opportunities 39–41
 biomedical engineering 273–274
 chemical and process engineering 274
 compliance and 271–273
 context 34–35
 digital light processing (DLP) 27–28
 economic and regulatory 273
 electronics and micro-systems 274
 energy and aerospace engineering 274
 feedstock formulations 30–32
 LCM multi-material printing 277–286
 lithography-based ceramic manufacturing (LCM) 276–277
 market and selection guidance 274–275
 materials and rheology 270
 mechanical modeling 35–37
 multi-material additive manufacturing 275–276
 and performance metrics 271–273
 process category 220–221
 processing 270–271
 quality management 271–273
 reproducibility 271
 stereolithography process (SLA) 27, 33
 thermal treatment 32–33
 top-down and bottom-up approaches 28–30
 two-photon polymerization 42–43
- volumetric additive manufacturing (VAM) process 10, 41–45
 volumetric porosity 259
 VP/2PP 214, 215
 VP/MEX 214–215
- W**
 water-based suspension 72, 75
 warm isostatic pressing (WIP) 183
 water quench tests 284
 wear-resistant coatings 202
 welding, downholders for 299–300
 welding process 300
 within-layer approach 279, 283
- X**
 X-ray diffraction (XRD) 255
- Y**
 yield optimization 317
 yield stress fluids (YSF) 114, 224
 yttria-stabilized zirconia (YSZ) 5, 112, 164, 182, 184, 307, 325
- Z**
 zirconia (ZrO_2) 1, 4, 5, 17, 70, 87, 129, 164–167, 169, 175, 196, 200, 203, 206, 213, 221–223, 231, 256, 270, 279–282, 297, 301, 303–305, 307, 309, 325, 328, 330, 336
 zirconia-toughened alumina (ZTA) 175, 279–282
 Zr-coatings, 203
