About the Editors *xi*

Preface *xiii*

- 1 Introduction** *1*
Zhangwei Chen and Paolo Colombo
 - 1.1 Most Important Properties and Applications of Ceramics *2*
 - 1.1.1 Most Important Properties of Ceramics *2*
 - 1.1.2 Main Applications of Ceramics in Advanced Science and Technology *3*
 - 1.2 Typical Processing Routes and Manufacturing Techniques for Ceramics *7*
 - 1.2.1 Typical Processing Routes for the Fabrication of Ceramic Components *7*
 - 1.2.2 General Manufacturing Techniques for Ceramics *8*
 - 1.3 Challenges and the Need for Additive Manufacturing *9*
 - 1.4 Brief Introduction to Ceramic Additive Manufacturing Techniques *10*
 - 1.5 Summary of the Book *14*
 - 1.6 Conclusions *18*
 - References *19*
- 2 Vat Photopolymerization (VPP)** *25*
Vincent Pateloup and Gweni Alonso Aruffo
 - 2.1 Introduction *25*
 - 2.2 Photopolymerization 3D Printing Processes for Ceramic Parts *26*
 - 2.2.1 Stereolithography Process *27*
 - 2.2.2 Digital Light Processing Process *27*
 - 2.2.3 Top-Down and Bottom-Up Approaches *28*
 - 2.2.4 Feedstock Formulations for VAT Photopolymerization Processes *30*
 - 2.2.5 Thermal Treatment *32*
 - 2.2.6 Summary of Both Processes *33*
 - 2.3 Process Modeling and Simulation *34*
 - 2.3.1 Context *34*

2.3.2	Mechanical Modeling	35
2.3.3	Limits of Actual Modeling Approaches	37
2.4	Advantages and Limits of VAT Processes	37
2.5	AM Hybridization Opportunities	39
2.6	Next Generation Ceramic Printing: Two-Photon Photopolymerization and Volumetric Additive Manufacturing Methods	41
2.6.1	Two-Photon Polymerization	42
2.6.2	Volumetric Additive Manufacturing	43
2.7	Conclusion	45
	Acknowledgments	46
	References	46
3	Binder Jetting (BJT) and Material Jetting (MJT)	51
	<i>Andrea Zocca, Jens Günster, Anna-Katharina Hofer, and Stefan Waldner</i>	
3.1	Inkjet Printing	51
3.1.1	Continuous Inkjet Printing	52
3.1.2	Drop-on-Demand Inkjet Printing (DOD)	53
3.1.2.1	Piezoelectric DOD Inkjet Printing (PIJ)	54
3.1.2.2	Thermal DOD Inkjet Printing (TIJ)	57
3.1.2.3	Other Approaches of DOD Inkjet Printing	58
3.1.3	Theory of Ink Printability	59
3.2	Binder Jetting (BJT)	62
3.2.1	Definition of the Technology (ISO/ASTM) and Working Principle	62
3.2.2	Historical Development and Applications	63
3.2.2.1	BJT of Gypsum Plaster Models	64
3.2.2.2	BJT of Sand Casting Molds and Cores	64
3.2.2.3	Large-Scale BJT (Concrete and Construction Materials)	65
3.2.2.4	BJT of Ceramics for Technical Applications	70
3.2.3	Feedstock Properties and Process Parameters	77
3.2.3.1	Powder Feedstock Properties	77
3.2.3.2	Layer Recoating	80
3.2.3.3	Process Parameters and Binder Saturation	82
3.3	Material Jetting	84
3.3.1	Definition and Classification of Material Jetting Technologies	84
3.3.2	Historical Development	86
3.3.2.1	Material Jetting of Ceramics	86
3.3.2.2	Nano-Particle Jetting (NPJ) TM	87
3.3.2.3	Multi-Material Jetting (MMJ)	87
3.3.2.4	Micro Particle Jetting TM (MPJ)	88
3.3.3	Process Variations	88
3.3.4	Challenges in Material Jetting	90
3.3.4.1	Nozzle Failures	90
3.3.4.2	Droplet Ejection, Impingement, and Fusion	92
3.3.4.3	Leveling	93

3.3.4.4	Curing and Crack Formation	93
3.3.5	Applications	94
3.3.6	Potential of Material Jetting	96
3.4	Post-Processes	98
	References	100
4	Material Extrusion (MEX)	109
	<i>Frank Clemens and Esther García-Tuñón</i>	
4.1	Introduction	109
4.2	Direct Ink Writing	109
4.2.1	DIW Systems	110
4.2.2	Feedstock Preparation: Additives and Processes	111
4.2.3	Feedstock Characterization	114
4.2.4	Printing Parameters	121
4.3	Fused Filament Fabrication	124
4.3.1	Printhead Systems	124
4.3.2	Feedstock Preparation: Additives and Processes	126
4.3.3	Feedstock Characterization	128
4.3.4	Printing Parameters	129
4.4	Heat Treatment and Post-Processing	131
4.4.1	Post-Processing for DIW-Printed Ceramic Parts	132
4.4.2	Post-Processing for FFF-Printed Ceramic Parts	132
4.5	AM of Fiber-Reinforced Composites	135
4.5.1	Fiber-Reinforced Composites by DIW Printing	135
4.5.2	Fiber-Reinforced Composites by FFF Printing	138
4.6	Summary	139
	Acknowledgments	140
	References	140
5	Powder-Bed Fusion (PBF)	153
	<i>Enrique Juste and Fabrice Petit</i>	
5.1	Short Historical Background of PBF	154
5.2	Terminology Focus	155
5.3	Indirect – Powder-Bed-Selective Laser Processing (PBSLP)	157
5.4	Direct – Powder-Bed-Selective Laser Processing (PBSLP)	161
5.4.1	Electron Beam Melting (EBM)	161
5.4.2	Powder-Bed-Selective Laser Processing (PBSLP)	164
5.5	Process Parameters PBF	171
5.5.1	Powder-Bed Features	171
5.5.1.1	Powder Properties	172
5.5.2	Hardware Parameters	174
5.6	Heat Treatment and Post-Processing	182
5.7	Conclusion	186
	References	187

6	Directed Energy Deposition (DED) of Ceramics	195
	<i>Amit Bandyopadhyay, Nathaniel W. Zuckschwerdt, and Susmita Bose</i>	
6.1	Introduction	195
6.2	Advantages and Limitations of DED	197
6.3	Powder Characteristics	199
6.4	DED Processing-Related Challenges	200
6.5	Processing via DED	201
6.6	Monolithic Ceramics via DED	201
6.7	Metal-Matrix Composites via DED	203
6.8	Current Challenges and Future Directions	206
6.9	Summary	207
	Acknowledgments	207
	References	207
7	Hybrid AM of Ceramics and AM of Ceramic-Based Multi-Material Components	211
	<i>Giorgia Franchin, Uwe Scheithauer, and Tassilo Moritz</i>	
7.1	Hybrid Additive Manufacturing of Ceramics	211
7.1.1	Concurrent Hybrid Processes	212
7.1.1.1	UV-Assisted MEX	212
7.1.1.2	Laser-Assisted MEX	214
7.1.2	Sequential Hybrid Processes	214
7.1.2.1	Additive/Additive	214
7.1.2.2	Additive/Subtractive	215
7.1.3	Conclusions for Hybrid Manufacturing	216
7.2	Additive Manufacturing of Ceramic-Based Multi-Material Components	217
7.2.1	Introduction Concerning AM of Multi-Material Ceramic Components	217
7.2.2	Multi-Material AM Methods for Ceramics	219
7.2.2.1	Process Category Vat Photopolymerization	219
7.2.2.2	Process Category Material Extrusion	221
7.2.2.3	Process Category Material Jetting	225
7.3	Applications	227
7.4	Conclusion and Outlook for AM of Ceramic Multi-Material Components	231
	References	232
8	Design and Characterization of Additively Manufactured Ceramics	243
	<i>Riccardo Balzarotti, Marco Pelanconi, Giovanni Bianchi, and Alberto Ortona</i>	
8.1	Introduction	243
8.2	Model Design – General Rules for Ceramic AM	243
8.3	Topological Optimization and Numerical Simulation	244
8.4	Characterization of the Feedstocks Prior to Printing	245
8.4.1	Powder Based	245

8.4.2	Liquid/Slurry Based	250
8.4.3	Bulk Solid Based	251
8.5	Characterization of the Parts Before and After Heat Processing	252
8.5.1	Mechanical Properties	252
8.5.2	Composition and Microstructure Characterization, from the Green to the Consolidated Part	255
8.5.3	Surface Roughness	256
8.5.4	Dimensional and Geometrical Stability	256
8.5.5	Density and Porosity	257
8.6	Summary	259
	References	260
9	Industrial VPP Equipment for AM of Functional Ceramic Composites	269
	<i>Martin Schwentenwein, Serkan Nohut, and Johannes Homa</i>	
9.1	Introduction	269
9.2	Materials and Rheology	270
9.3	Processing	270
9.4	Reproducibility	271
9.5	Quality Management, Compliance, and Performance Metrics	271
9.6	Economic and Regulatory Considerations	273
9.7	Industrial Applications of Lithography-Based Ceramic AM	273
9.7.1	Biomedical Engineering	273
9.7.2	Energy and Aerospace Engineering	274
9.7.3	Chemical and Process Engineering	274
9.7.4	Electronics and Micro-Systems	274
9.8	Market Considerations and Selection Guidance	274
9.9	Multi-Material Additive Manufacturing	275
9.10	Multi-Material AM of Ceramic Composites with LCM	276
9.10.1	Lithography-Based Ceramic Manufacturing (LCM)	276
9.10.2	LCM Multi-Material Printing	277
9.11	Applications for LCM Multi-Material Printing	279
9.11.1	Alumina/Zirconia-Toughened Alumina	279
9.11.2	Porous/Dense Alumina	282
9.12	Future Research	286
9.13	Summary	289
	Acknowledgments	289
	References	290
10	Applications and Impacts of AM of Ceramics	295
	<i>Kareen Malsallez, Maxence Bourjol, Natalia Kostretsova, Marc Torrell, Albert Tarancón, Malte Hartmann, Johannes Noll, Georgia Astbury, Matthew Drane, and Elsa Antunes</i>	
10.1	Aerospace and Defense Applications	296
10.1.1	Aerospace Applications: Large-Scale, Lightweight, and Integrated Structures	296

10.1.2	Space Communication: Ceramic Antennas and NewSpace Innovation	297
10.1.3	Defense: High-Performance, Tailored Components	297
10.2	Chemical Applications	298
10.3	Electronic and Semiconductor Applications	299
10.3.1	Downholders for Welding	299
10.3.2	Semiconductor Industry: From Prototyping to Industrial-Scale Production	301
10.4	Biomedical Applications	301
10.4.1	Personalized Healthcare: The Expanding Role of Ceramic 3D Printing in Biomedicines	301
10.4.2	Orthopedic and Dental Solutions	302
10.4.3	Next-Generation Surgical Tools and Devices	303
10.5	Detailed Case Studies of Ceramic AM Applications	306
10.5.1	Solid Oxide Cells for High-Efficiency Hydrogen Production	306
10.5.2	Ecological Restoration for Environmental Protection	311
10.6	Cross-Domain Value and Systemic Impact of Ceramic Additive Manufacturing	315
10.7	Conclusion	317
	References	318

11	New Developments and Perspectives	321
	<i>Fiona Spirrett and Soshu Kiriara</i>	
11.1	Introduction	321
11.2	Green/Smart Design and Manufacturing	322
11.2.1	Sustainable Feedstocks and Material Circularity	323
11.2.2	Environmental Impact of Ceramic Sintering	325
11.2.3	Design for Sustainability – Computational Modeling	326
11.2.4	Challenges and Barriers to Green Design and Manufacturing	328
11.3	4D/5D Printing	328
11.3.1	4D Ceramic Printing	329
11.3.2	5D Ceramic Printing	333
11.4	Potentials and Challenges	336
	References	338
