Preface *vii*

1 Fundamentals of Polymer 1

- 1.1 What Is Polymer? 1
 - 1.1.1 What Molecular Weight Should a Substance Be Defined as “Polymer”? 1
 - 1.1.2 Primary, Secondary, and Higher-ordered Structures 4
 - 1.1.3 Secondary Structure 5
 - 1.1.4 Higher-order Structure 7
 - 1.1.4.1 Polyethylene 11
 - 1.1.4.2 Isotactic Polypropylene 12
 - 1.1.4.3 Nylon 6,6 13
- 1.2 Polymer ABC, Alloy, Blend, and Composite 13
 - 1.2.1 Interfaces in Polymer Alloy and Blend 14
 - 1.2.2 Phase Diagram and Flory-Huggins Theory 18
 - 1.2.3 Polymer Composite 23
- References 28

2 Fundamentals of Thermal Expansion 31

- 2.1 Definition of Thermal Expansion 31
- 2.2 Mechanism of Thermal Expansion of Material in a Solid, Liquid, and Gas State 38
 - 2.2.1 Solid, Especially Crystal Lattice 38
 - 2.2.2 Liquid 41
 - 2.2.2.1 The Lattice Theory 43
 - 2.2.2.2 The Distribution Function 46
 - 2.2.3 Gas 47
- 2.3 Mechanism of Thermal Expansion of Polymers 48
 - 2.3.1 Free Volume of Polymer 49
 - 2.3.1.1 Free Volume Theory 51
 - 2.3.1.2 Free Volume by the Equation of State 53
 - 2.3.1.3 Contribution of Free Volume to Thermal Expansion 57

2.3.2	Thermal Expansion of Crystal Lattice in Crystalline Polymers	59
2.3.2.1	Theory Based on the Grüneisen Parameter	60
2.3.2.2	Linear Thermal Expansion Coefficients of Lattice Parameters of Several Crystalline Polymers	68
2.4	Phenomenon That Occurs When Two Materials with Different Thermal Expansions Are Combined	77
2.4.1	Phase Diagram of Polymer Blend with Which Two Polymers Have Different Thermal Expansions	77
2.4.2	Thermal Stress Generated in a Structure Made of Two Different Materials with Different Thermal Expansion Coefficients	80
	References	83
3	Thermal Expansion Theory of Crystal Axis in Crystal Lattice of Crystalline Polymers	89
3.1	Linear Chain Model	89
3.1.1	Modeling	89
3.1.2	Calculation of CLTE of Chain Growth Direction (z -direction) $\alpha_{\parallel}^z$	93
3.1.3	Calculation of CLTE of Transverse to Chain Growth Direction (x, y -directions) $\alpha_{\perp}^{x,y}$	95
3.2	Self-consistent Harmonic Model	98
3.2.1	Modeling	99
3.2.2	Comparison of the Model with Experimental Data	102
3.3	Spring-in-medium Model	103
3.3.1	Preparation for Construction of Thermal Expansion Model	104
3.3.2	Comparison of the Model with Experimental Data	107
3.4	Comparison with Experimental Data	110
	References	112
4	Measurement of Thermal Expansion	115
4.1	Measurement of Bulk CVTE	115
4.1.1	Volume Dilatometry	115
4.1.2	PVT Behavior Measurement	118
4.1.2.1	Piston-die Method	119
4.1.2.2	Bellows Method	120
4.2	Measurement of Bulk Coefficient of Linear Thermal Expansion (CLTE) by TMA	128
4.2.1	Expansion/Compression Mode	129
4.2.2	Tension Mode	130
4.2.3	Penetration Mode	131
4.3	Emerging Technologies of Evaluation of Thermal Expansion	136
4.3.1	PALS for Evaluation of Temperature Dependence of Free Volume	136
4.3.2	Temperature-variable X-ray Scattering Using Synchrotron Radiation for Linear Thermal Expansion in Amorphous and Crystalline Phase	144

4.3.3	Laser Interferometry	153
4.3.4	Digital Image Correlation Method	155
4.3.5	Temperature-variable AFM	160
	References	164
5	Composite Theory of Thermal Expansion	169
5.1	General Review of Theories of Thermal Expansion of Polymer Composites	169
5.1.1	Rule-of-Mixtures	170
5.1.2	Thermal Expansion of Spherical Particle Reinforced Composites	171
5.1.3	Thermal Expansion of Cylindrical-shaped Inclusion or Fiber-reinforced Composites	175
5.1.3.1	Thermal Expansion of Unidirectional Fiber Composites	175
5.1.3.2	Linear Thermal Expansion Coefficient of Randomly Oriented SF Composites	177
5.1.3.3	Shear Lag Theories to Calculate Thermal Expansion Coefficients for SF-reinforced Composites	177
5.2	Thermal Expansion Theory by Schapery	180
5.2.1	Thermoelastic Energy Principles	182
5.2.2	Volume Thermal Expansion Coefficient	185
5.2.3	Linear Thermal Expansion Coefficient	190
5.3	Wang-Kwei Model for Polymer Composites Containing Spherical Inclusions	195
5.4	Spherical Shell Model for Polymer Blends with Layered Shells by Manabe and Takayanagi	200
5.5	Chow Model for the Linear and Volume Thermal Expansion Coefficients of the Polymer Composite with Ellipsoidal Inclusions	205
5.6	Mori-Tanaka Theory to Accommodate Polymer Composites with Versatile Shapes of Fillers	208
5.6.1	Introduction of Eshelby Equivalent Inclusion Method and Eshelby's Tensor as a Basic Theory	209
5.6.1.1	Basic Idea of Eshelby's Theory	209
5.6.1.2	Eshelby's Tensor	213
5.6.2	Mori-Tanaka Mean Field Theory	215
5.6.2.1	Basic Idea of Mori-Tanaka Mean Field Theory	215
5.6.2.2	Mori-Tanaka Theory for Thermal Expansion of Polymer Composite	217
5.6.3	Self-consistent Model	223
	References	224
6	Reduction Technologies of Thermal Expansion	227
6.1	Reduction of Thermal Expansion by Fillers	227
6.1.1	General Consideration of Reduction of Thermal Expansion by Fillers	228
6.1.2	Reduction of Thermal Expansion Using Nano-fillers	230
6.1.2.1	Nano-clay	230

6.1.2.2	Nano-silica	236
6.1.2.3	Carbon Nanotube	243
6.1.2.4	Graphene	247
6.1.3	Reduction of Thermal Expansion of Composite by the Fillers with Negative Thermal Expansion (NTE)	251
6.1.3.1	Flexible Network	252
6.1.3.2	Magnetovolume Effect	255
6.2	Reduction of Thermal Expansion by Introducing Structural Constraints into Polymer Backbone	258
6.2.1	Chemical Cross-linking	258
6.2.2	Rigid Functional Group	260
6.3	Reduction of Thermal Expansion by Oriented Molecules	266
6.4	Reduction of Thermal Expansion by Polymer Blends, in Particular, Elastomers	273
	References	287
	Index	292
