Foreword *xiii*

About the Author *xv*

Preface *xvii*

Part I Frameworks 1

1 Introduction 3

1.1 Theoretical and Computational Chemistry 3

1.2 Multiscale Modeling 5

1.3 Orbital-based Theories 7

1.3.1 Valence Bond Theory 7

1.3.2 Molecular Orbital Theory 9

1.3.3 Concepts from Orbital-based Theories 11

1.4 Density Functional Theory 13

1.5 Scope of This Book 18

References 19

2 Conceptual Density Functional Theory 23

2.1 Hypotheses and Brief History 23

2.1.1 Hypotheses of CDFT 23

2.1.2 Brief History 24

2.2 Basic Formulation 25

2.2.1 Legendre Transform 25

2.2.2 Four Ensembles of CDFT 27

2.2.3 Basic Relations in Canonical Ensemble 28

2.2.4 Basic Relations in Grand Canonical Ensemble 29

2.2.5 Basic Relations in Isomorphic and Grand Isomorphic Ensembles 31

2.2.6 Identities in CDFT 32

2.3 Basic Concepts and Principles 33

2.3.1 Electronegativity and Hardness 33

2.3.2 Fukui Function and FMO Theory 34

2.3.3 Electrophilicity and Nucleophilicity 35

2.3.4 Dual Descriptor and Woodward–Hoffmann Rules 36

2.3.5	CDFT Principles	37
2.4	Extensions	38
2.4.1	Fractional Electron Numbers	38
2.4.2	Finite-temperature CDFT	39
2.4.3	Spin-polarized CDFT	40
2.4.4	Excited State CDFT	41
2.4.5	Conceptual Density Matrix Functional Theory	42
2.4.6	Miscellaneous Extensions	44
2.5	Concluding Remarks	46
	References	47
3	Density-associated Quantities	53
3.1	Electron Density	54
3.1.1	How to Obtain Electron Density	54
3.1.2	Properties of Electron Density	56
3.2	Density Gradient and Laplacian	60
3.3	Topological Analysis	62
3.4	Quantum Theory of Atoms in Molecules	63
3.5	DAQ-based Indices	65
3.5.1	Noncovalent Interaction (NCI) Index	66
3.5.2	USI Index	67
3.6	DAQs in Excited States	68
3.7	DAQ in Momentum Space	70
3.8	Concluding Remarks	71
	References	71
4	Information-theoretic Approach	75
4.1	Overview	75
4.2	ITA Quantities	76
4.2.1	Absolute ITA Quantities	76
4.2.2	Relative ITA Quantities	79
4.3	Four ITA Representations	80
4.3.1	Shape-function Representation	80
4.3.2	Atoms-in-molecules Representation	81
4.3.3	Finite-difference Representation	82
4.3.4	Other Representations	84
4.4	Three ITA Principles	84
4.5	Two Identities Among ITA Quantities	87
4.6	Information Functional Theory	88
4.7	Applications for ITA Quantities	88
4.8	Conclusions and Outlook	89
	References	90
5	Orbital-free Density Functional Theory	97
5.1	Overview	97
5.2	Theoretical Framework	100

5.2.1	Euler–Lagrange Equation of OF-DFT	100
5.2.2	Total Energy Partition Schemes	102
5.2.3	Pauli Energy, Pauli Potential, Pauli Force, and Pauli Charge	105
5.2.4	Steric Energy, Steric Potential, Steric Force, and Steric Charge	108
5.3	Descriptors from OF-DFT	110
5.3.1	ELF Index	110
5.3.2	Strong Covalent Interaction Index	111
5.3.3	BNI Index	113
5.4	Applications of OF-DFT	114
5.5	Concluding Remarks	114
	References	115

6 Recent Advances in Density-based Frameworks 119

6.1	Relationship Among Four Frameworks	120
6.1.1	Bridging OF-DFT and ITA via Variational Principle and Energetic Information	120
6.1.2	Linking ITA and CDFT Through Reactivity Descriptors	122
6.1.3	Connecting CDFT with OF-DFT via Functional Expansions	122
6.1.4	Unifying the Four Density-based Frameworks	123
6.2	Topological Analysis of ITA Quantities	124
6.3	Energetic Information	126
6.4	ITA Extended to Pair Density	130
6.5	Extension to Excited States	132
6.6	Merging with Machine Learning	133
6.7	Concluding Remarks and Outlook	134
	References	136

Part II Applications 139

7 Covalent and Noncovalent Interactions 141

7.1	Introduction	141
7.2	Orbital-based Approaches	143
7.2.1	Valence Bond Theory	143
7.2.2	Molecular Orbital Theory	144
7.3	Density-based Approaches	145
7.3.1	NCI Index	145
7.3.2	Strong Covalent Interaction Index	147
7.3.3	Ultra-strong Interaction Index	150
7.3.4	BNI Index	151
7.4	Energetics of Bonding	154
7.5	Recent Developments	156
7.5.1	Pauli Energy Associated Quantities	156
7.5.2	Energetic Information	157
7.6	Concluding Remarks	159
	References	159

8	Cooperativity and Frustration	163
8.1	Introduction	163
8.2	Traditional Theory of Cooperativity	164
8.3	Quantification of Cooperativity in Density Functional Theory	166
8.3.1	Formulation	166
8.3.2	Patterns of Cooperativity	168
8.3.3	Quantification with Density-based Quantities	169
8.4	Classical Theory of Frustration	172
8.5	Quantification of Frustration in DFT	174
8.5.1	Formulation	174
8.5.2	Minimum and Maximum Frustration	176
8.6	Principle of Cooperativity and Frustrativity	178
8.7	Recent Advances	179
8.8	Outlook: From Cooperation and Frustration to Emergence	180
	References	181
9	Homochirality and Principle of Chirality Hierarchy	183
9.1	What Is Chirality?	183
9.2	Homochirality and Theories of Homochirality	185
9.3	Types of Chirality and Chirality Hierarchy	186
9.4	Chirality Transmission	189
9.5	Chirality Hierarchy Case Study: Helices	189
9.6	Chirality Hierarchy Case Study: Propellers	192
9.7	Principle of Chirality Hierarchy	195
9.8	Concluding Remarks	196
	References	197
10	Electrophilicity and Nucleophilicity	201
10.1	Introduction	201
10.2	Experimental Scales	203
10.3	Quantification in Conceptual Density Functional Theory	205
10.3.1	Electrophilicity Index	206
10.3.2	Fukui Function	207
10.3.3	Dual Descriptor	209
10.4	Quantification in ITA	211
10.5	Regioselectivity	214
10.6	Benchmark CDFT and ITA Quantifications	215
10.7	<i>Ortho/Para</i> and <i>Meta</i> Group Directing Effect	219
10.8	Concluding Remarks	221
	References	221
11	Steric Effect and Stereoselectivity	225
11.1	Steric Effect	225
11.1.1	What Is Steric Effect?	226
11.1.2	Types of Steric Effect	226
11.1.3	Origin of Steric Effect	227

11.1.4	Brief History of Steric Effect	228
11.2	Stereoselectivity	228
11.2.1	What Is Stereoselectivity?	228
11.2.2	Examples of Stereoselectivity	229
11.2.3	Origin of Stereoselectivity	230
11.2.4	Models of Stereoselectivity	231
11.3	Experimental Scales of Steric Effect	232
11.3.1	Taft's Steric Parameter (E_s)	232
11.3.2	Charton's Steric Parameter (ν)	233
11.3.3	A-values	233
11.3.4	Tolman Cone Angle	233
11.3.5	Verloop STERIMOL Parameters	234
11.4	Steric Effect: A Density-based Quantification	234
11.5	Validation by Taft's Steric Parameters	238
11.6	Stereoselectivity: A Density-based Description	239
11.7	Quantification of Stereoselectivity	241
11.8	Summary and Conclusions	242
	References	243
12	Acidity and Basicity	247
12.1	Introduction	247
12.1.1	Types of Acids and Bases	247
12.1.2	Brief History of Acids and Bases	248
12.1.3	Integrating Acid–Base Theories: A Density-based Perspective	249
12.2	Brønsted–Lowry Acidity and Basicity	249
12.2.1	Quantification	250
12.2.2	Simulations	251
12.3	CDFT and Brønsted–Lowry Acidity and Basicity	253
12.4	LA and LB	256
12.4.1	Quantification	257
12.4.2	Frontiers of Lewis Acidity/Basicity Research	258
12.5	HSAB Principle	260
12.6	CDFT, ITA, and LA and LB	261
12.7	Outlook: A Unified View of Acid–Base Chemistry	265
	References	266
13	Aromaticity and Antiaromaticity	271
13.1	Introduction	271
13.2	Aromaticity and Antiaromaticity in Ground State	272
13.2.1	Criteria of Aromaticity	272
13.2.2	Manifestations of Aromaticity	273
13.2.3	Antiaromaticity	274
13.2.4	Theoretical Frameworks	275
13.3	Other Types of Aromaticity and Antiaromaticity	276
13.3.1	Excited State Aromaticity and Antiaromaticity	276
13.3.2	Möbius Aromaticity	276

13.3.3	Three-dimensional Aromaticity	277
13.3.4	σ -Aromaticity	277
13.3.5	Metalloaromaticity	277
13.3.6	Adaptive Aromaticity	277
13.3.7	Miscellaneous Types of Aromaticity and Antiaromaticity	277
13.4	Descriptors of Aromaticity and Antiaromaticity	278
13.4.1	Structural Descriptors	278
13.4.2	Energetic Descriptors	279
13.4.3	Property Descriptors	280
13.4.4	Other Descriptors	282
13.5	QTAIM, DFT, CDFT, and Aromaticity	283
13.6	ITA, Aromaticity, and Antiaromaticity	285
13.7	Concluding Remarks: Toward a Unified Understanding	288
	References	289
14	Catalysis	295
14.1	Introduction	295
14.1.1	What Is Catalysis?	296
14.1.2	A Brief History of Catalysis	296
14.1.3	Types of Catalysis	298
14.1.4	Key Parameters and Concepts in Catalysis	299
14.1.5	Catalysis: The Holy Grail of Chemistry	300
14.2	Theoretical Aspects of Catalysis	300
14.3	Understanding Catalysis with Physicochemical Effects	303
14.4	Catalytic Cycle and Mechanistic Aspects of Catalysis	305
14.4.1	Anatomy of a Catalytic Cycle	305
14.4.2	Common Elementary Steps in Homogeneous Catalysis	306
14.4.3	Common Elementary Steps in Heterogeneous Catalysis	308
14.4.4	Theoretical Models for Catalytic Cycles	309
14.5	Emerging Areas and Main Challenges of Catalysis	310
14.5.1	Emerging Areas in Catalysis	310
14.5.2	Main Challenges of Catalysis	312
14.6	Toward the Ultimate Theory of Catalysis	314
14.6.1	Ontological and Epistemological Requirements	314
14.6.2	Functional Requirements: What Should the Theory Do?	315
14.6.3	Conceptual Requirements: From Chemical Concepts to Understanding	315
14.6.4	Additional Theoretical and Methodological Requirements	315
14.6.5	Catalyst as Waterwheel: A Hierarchical Model	316
14.7	Conclusions	318
	References	319
