Contents

About the Author *ix*
Preface *xi*

1 Fundamentals of Battery Materials and the Evolution of Advanced Characterization Techniques *1*
1.1 Global Energy Transition *1*
1.1.1 Core Demand for Energy Transformation *1*
1.1.2 Performance Driven by Terminal Application Scenarios *1*
1.1.3 Industrialization and Scientific Research Pattern of Battery Technology *2*
1.2 Basic Principles and Core Composition of Lithium-Ion Batteries *3*
1.2.1 Working Principle of Lithium-Ion Batteries *3*
1.2.2 Core Composition of Lithium-Ion Batteries *4*
1.3 Development Trend and Core Characteristics of Secondary Batteries *7*
1.3.1 Lithium-Ion Batteries *7*
1.3.2 Sodium-Ion Batteries *8*
1.3.3 All-Solid-State Batteries *9*
1.3.4 Other New Battery Systems *10*
1.4 Research Trend and Core Bottlenecks of Key Battery Components *11*
1.4.1 Electrode Materials *11*
1.4.1.1 Cathode Materials *11*
1.4.1.2 Anode Materials *12*
1.4.2 Electrolyte *12*
1.4.2.1 Liquid Electrolyte *12*
1.4.2.2 Solid Electrolyte *13*
1.4.3 Interface *13*
1.5 Evolution of Characterization Technology *14*
1.5.1 Limitations of Traditional Offline Characterization *15*
1.5.2 Technical Requirements for Advanced Characterization *15*
1.5.3 Core Value of Advanced Characterization *16*
References *17*

2 Neutron Scattering and Pair Distribution Function Analysis for Battery Materials *19*
2.1 Introduction *19*
2.2 Neutron Facilities: Global Distribution and Specialized Capabilities *21*
2.2.1 Neutron Production Mechanisms: ^{235}U Fission and Spallation Reactions *21*
2.2.2 Representative Neutron Facilities Worldwide *24*

2.3 Fundamental Comparison: Neutrons vs. Electrons vs. X-rays for Material Characterization *30*
2.4 Neutron Scattering Techniques: Principles and Variants *32*
2.4.1 Neutron Diffraction *34*
2.4.2 Total Scattering *36*
2.5 Applications of Neutron Techniques in Energy Storage Materials *40*
2.5.1 Cathode Materials *40*
2.5.2 Interfaces (SEI/CEI) *47*
2.5.3 Solid-State Electrolytes (SSEs) *48*
2.6 Challenges and Future Directions *49*
References *50*

3 X-ray Diffraction and Scattering Techniques: From Crystal Structure to Multiscale Structural Analysis *55*
3.1 Fundamentals and Techniques of X-ray Diffraction *55*
3.1.1 Fundamental Principles of XRD *55*
3.1.2 Diffraction Modes: Bragg, Laue, and Powder *57*
3.1.3 Powder XRD Instrumentation and Geometries *58*
3.1.4 Sample Preparation and Data Collection *59*
3.1.5 Phase Identification *60*
3.1.6 Quantitative Phase Analysis *61*
3.1.7 Microstructure, Defects, and Stress/Texture *62*
3.1.8 Total Scattering and PDF Analysis *63*
3.1.9 In-situ and Operando XRD *64*
3.2 Synchrotron Radiation XRD *67*
3.2.1 SR-XRD Instrumentation *67*
3.2.2 Example of a SR-XRD Beamline *68*
3.2.3 SR-XRD: Single-crystal Diffraction Methods *69*
3.2.4 SR-XRD: Polycrystalline Diffraction Methods *71*
3.3 Small-angle/Wide-angle X-ray Scattering Techniques *72*
3.3.1 Introduction to SAXS/WAXS *72*
3.3.2 Complementarity of SAXS/WAXS with Other Characterization Techniques *73*
3.3.3 SAXS/WAXS Instrumentation Overview *74*
3.3.4 Grazing-incidence Geometry and Surface-sensitive Scattering *75*
3.3.5 GIXRD, GIWAXS, and GISAXS on Synchrotron Platforms *76*
3.4 Application Cases *77*
3.4.1 Rietveld + PDF Reveals Complex Phase Composition, Phase Ratios, and Short-range Order *78*
3.4.2 Application of XRD in Phase Transition and Structural Evolution of LIB Materials During Charge and Discharge Processes *80*
3.4.3 Application of GIXRD and GISAXS/GIWAXS to Inspect Thin Film Samples in LIB Systems *83*
3.4.4 Dimensional, Strain, and Defect Analysis of LIB Materials Using XRD *85*
3.5 Conclusions and Perspectives *89*
References *91*

4 Transmission Electron Microscopy for Atomic Scale and Dynamic Characterization of Battery Materials *95*
4.1 Electron Beam Imaging and Basic Configuration of Transmission Electron Microscopy (TEM) *95*
4.1.1 Electron Beam Imaging *95*

4.1.2 Basic Configuration of Modern TEM *96*
4.1.2.1 Illumination System *96*
4.1.2.2 Imaging System *96*
4.1.2.3 Imaging and Recording System *97*
4.1.3 Operating Modes of TEM *98*
4.1.3.1 Imaging Mode *99*
4.1.3.2 Diffraction Mode *99*
4.2 Electron Diffraction *100*
4.2.1 Ewald Sphere *101*
4.2.2 Deviation Parameter *101*
4.2.3 SAED and Diffraction Pattern Calibration *103*
4.2.4 Single Crystal Electron Diffraction Pattern Calibration *103*
4.2.4.1 Polycrystalline Diffraction Patterns *104*
4.2.5 Secondary Diffraction *104*
4.3 Different Imaging Modes and Contrast Imaging *105*
4.4 Diffraction Contrast Images *106*
4.4.1 Two-beam Approximation *106*
4.4.2 Kinematic Approximation *107*
4.4.3 Column Approximation *107*
4.4.4 Crystal Defect Analysis *107*
4.5 High-resolution TEM (HRTEM) Images and Phase Contrast *108*
4.6 STEM Images *110*
4.7 Introduction to New TEM Technologies *111*
4.7.1 iDPC-STEM Imaging Technology *111*
4.7.2 In-situ TEM *112*
4.7.3 Cryogenic TEM (Cryo-TEM) *112*
4.8 Application Cases *113*
4.8.1 TEM Imaging and SAED *114*
4.8.2 Electron Energy Loss Spectroscopy *121*
4.8.3 Cryogenic Electron Microscopy *128*
4.8.4 In-situ TEM *131*
4.8.5 Aberration-corrected TEM *134*
4.9 Conclusion and Prospective *139*
References *140*

5 Transmission X-ray Microscopy for Multiphysics Imaging of Batteries *143*
5.1 Fundamental Principles and Theories *143*
5.1.1 Theories and Progress *143*
5.1.2 Phase Contrast and Zernike Phase Contrast Principle *144*
5.1.3 X-ray Detection and Signal Acquisition System *145*
5.2 Equipment and Analysis *147*
5.2.1 Typical Equipment *148*
5.2.2 Acquisition Mode *150*
5.2.3 Qualitative Analysis *152*
5.2.4 Quantitative Analysis *154*
5.2.5 Beamline Introduction *156*
5.3 Introduction to Emerging TXM Technology *158*
5.3.1 In-situ Electrochemical TXM *159*
5.3.2 In-situ TXM with Coupled Thermal and Mechanical Fields *160*
5.3.3 Coupled with X-ray Fluorescence (XRF) *162*
5.3.4 Coupled with X-ray Diffraction (XRD) *164*
5.4 Application Cases *165*

5.4.1 Two-dimensional TXM (2D TXM) Application Cases in Batteries *165*
5.4.2 3D TXM (Full-field Nanotomography) for Battery Materials and Cells *170*
5.4.3 Operando Electrochemical Testing Enabled by TXM *173*
5.4.4 TXM with In-situ Heating *177*
5.5 Conclusion and Prospective *179*
References *182*

6 Synchrotron-based Soft X-ray Absorption Spectroscopy for Electronic and Interfacial Characterization of Battery Materials *185*
6.1 Fundamentals and Theory *185*
6.1.1 Fundamental Principles of X-ray Absorption *185*
6.1.2 Self-absorption Effect and Multiplet Effect *187*
6.1.3 Signal Collection *189*
6.2 Equipment and Analysis *193*
6.2.1 Typical sXAS Equipment *194*
6.2.2 Analysis of Elemental Composition and Valence State *195*
6.2.3 Analysis of Electronic Structure Information *196*
6.2.4 Analysis of Local Structural Information *197*
6.2.5 Analysis of Surface and Interface Information *197*
6.2.6 In-situ and Operando sXAS *198*
6.2.7 Example of a sXAS Beamlines *200*
6.3 Application Cases *202*
6.3.1 Application of sXAS in Probing the Charge Compensation Mechanism of Electrode Materials During Electrochemical Cycling *202*
6.3.2 Application of sXAS in Probing Battery Solid Electrolyte Interphase (SEI) *205*
6.3.3 Application of Operando sXAS in Monitoring Dynamic Interfacial Processes of Batteries During Operation *207*
6.3.4 Application of sXAS in Failure Analysis and Heterogeneity Mapping of Battery Materials via Spectromicroscopy *209*
References *210*

7 Resonant Inelastic X-ray Scattering for Probing Electronic Excitations in Battery Materials *213*
7.1 Fundamentals and Techniques of Resonant Inelastic X-ray Scattering *213*
7.1.1 Fundamental Principles of RIXS *214*
7.1.2 The RIXS Process *214*
7.1.3 The Experimental Methods and Basis of RIXS *215*
7.2 Instrumentation and Analysis of RIXS *217*
7.2.1 Instrumentation and Geometries *217*
7.2.2 Data Collection of RIXS *219*
7.2.3 Data Analysis and Fitting of RIXS *220*
7.3 Application Cases *222*
7.3.1 RIXS Unravelling Anionic Redox Mechanisms *222*
7.3.2 Application of RIXS on TM Redox and Spin States *226*
7.3.3 RIXS Characterization of Battery Interfaces (SEI/CEI) *229*
7.4 Summary and Perspectives *230*
References *231*

8 Synchrotron-based Hard X-ray Absorption Spectroscopy for Local Structure and Redox Chemistry in Battery Materials *235*
8.1 Fundamentals of Hard X-ray Absorption Spectroscopy *235*

8.1.1 XANES *235*
8.1.2 EXAFS *239*
8.1.3 Wavelet Transform Method for XAS *242*
8.2 Equipment and Analysis *246*
8.2.1 Standard Experimental Setup *246*
8.2.2 Measurement Modes and Sample Preparation *248*
8.2.3 Data Preprocessing and Analysis *250*
8.2.3.1 Raw Data Preprocessing *250*
8.2.3.2 Background Subtraction *250*
8.2.3.3 Normalization *251*
8.2.3.4 Conversion to *k*-space and Weighting *252*
8.2.3.5 Fourier Transformation *252*
8.2.3.6 Fitting Analysis *252*
8.2.4 Beamline Overview *253*
8.3 Application Cases *254*
8.3.1 Monitoring Redox Reactions *254*
8.3.2 Probing Local Structure *255*
8.3.3 Time-resolved Hard XAS and Its Application to Dynamic Studies *257*
8.3.4 Surface Probing Tool: Hard XAS in Reflection Mode *260*
References *261*

9 Electron Paramagnetic Resonance Spectroscopy for Defect and Redox Characterization in Battery Materials *265*
9.1 Basic Principles *265*
9.1.1 Principles of Magnetic Resonance *265*
9.1.2 Absorption-relaxation-absorption Process *267*
9.1.3 Field Modulation *267*
9.1.4 Phenomena/Effects *268*
9.2 Equipment and Analysis *269*
9.2.1 Influencing Factors *271*
9.2.2 Work Pattern *272*
9.2.3 Quantitative Analysis *272*
9.3 Introduction of New Technologies *273*
9.3.1 In-situ Electrochemistry *273*
9.3.2 Combination *273*
9.3.3 Pulse EPR *273*
9.3.4 Rapid Scanning-EPR *274*
9.4 Application Cases *275*
9.4.1 In-situ EPR Characterization of Lithium Deposition and Dendrite Evolution Under Fast Charging *275*
9.4.2 Analysis of Active Species and Redox Mechanisms in Cathode Materials *277*
9.4.3 Evaluation of Storage Mechanism and Defect Characteristics in Anode Materials *285*
9.5 Conclusion and Prospective *286*
References *286*

10 Raman Spectroscopic Characterization of Structural and Interfacial Evolution in Battery Materials *289*
10.1 Fundamental Principles and Theory *289*
10.1.1 The Development of Classical Theory and Quantum Mechanics *289*
10.1.2 Vibration Modes, Selection Rules, and Polarizability Tensor *291*

10.1.3 Enhanced Raman Effect (Surface-Enhanced Raman Spectroscopy (SERS)/ Resonance Raman Spectroscopy (RRS)) *292*
10.1.4 Structural Information of Signal Strength and Frequency Shift *293*
10.2 Instrumentation and Analysis *293*
10.2.1 Typical Equipment and Light Sources *293*
10.2.2 Typical Working Mode *294*
10.2.3 Qualitative Analysis *295*
10.2.4 Quantitative Analysis *295*
10.2.5 Enhancing Analytical Capabilities Through Combined Techniques *295*
10.3 Advanced Techniques and In-situ Applications *296*
10.3.1 Electrochemical In-situ Raman Testing Technique *296*
10.3.2 In-situ Technologies for Thermal and Strain Environments *297*
10.3.3 Near-field Optics and Nano-enhanced In-situ Technology *299*
10.3.4 Multifunctional Combined System *299*
10.4 Application of Raman Spectroscopy in the Study of Battery Materials *300*
10.4.1 Crystal Structure Analysis and Phase Transition Tracking of Active Materials *300*
10.4.2 Study on the Electrode–electrolyte Interface Process and Side Reaction *305*
10.4.3 Transport Mechanism and Interface Stability of Solid Electrolyte *312*
10.4.4 Integration of Multimodal and In-situ/Condition Characterization Techniques *317*
10.5 Summary and Outlook *320*
References *321*

11 Gas Evolution and Surface Chemistry Analysis of Battery Materials by Differential Electrochemical Mass Spectrometry (DEMS) and Time-of-Flight Secondary Ion Mass Spectrometry (TOF-SIMS) *323*
11.1 Principles and Instrumentation of DEMS *323*
11.1.1 Fundamentals of DEMS *323*
11.1.2 Fundamentals of TOF-SIMS *327*
11.2 Applications of DEMS in Battery Research *330*
11.2.1 Elucidation of Electrolyte Decomposition Mechanisms *330*
11.2.2 Mechanism of Cathode Gas Evolution *333*
11.2.3 SEI Formation Mechanism at the Anode Interface *340*
11.3 Applications of TOF-SIMS in Battery Research *342*
11.3.1 Surface and Interface Analysis of Anode Materials *342*
11.3.2 Surface and Interface Analysis of Cathode Materials *345*
11.3.3 Analysis of Electrode Surface Evolution *347*
11.4 Summary and Prospects *349*
References *351*

12 Future Directions in Advanced Characterization of Battery Materials *355*
12.1 In-situ Characterizations *355*
12.2 Multiscale and Multispectroscopic Characterizations *358*
12.3 Integration of Characterization and Simulation *360*
12.4 Artificial Intelligence in Materials Characterizations *362*
References *364*
