About the Editors xxi

Preface xxiii

Part I Fundamental 1

- 1 Fundamentals and Advantages of Hybrid Water Electrolysis** 3
Vipada Aupama, Phonnapha Tangthuam, Ahmad Azmin Mohamad, and Soorathep Kheawhom
 - 1.1 Concept and Scope 3
 - 1.2 Thermodynamic and Kinetic Basis for Energy Reduction 7
 - 1.3 Anodic Reaction Space and Substrate Selection 9
 - 1.4 Advantages Beyond Voltage: Coproduction, Safety, and Sustainability 13
 - 1.4.1 Coproduction: Transforming the Anode into a Chemical Manufacturing Module 14
 - 1.4.2 Safety and Operational Flexibility: Reducing Oxygen-related Constraints 14
 - 1.4.3 Sustainability and Circularity: Coupling Hydrogen with Waste Conversion 15
 - 1.4.4 Interdependence of Advantages and the Role of System-level Metrics 16
 - 1.5 Remaining Challenges and Outlook 16
 - References 19

Part II Alcohol-assisted Water Electrolysis 23

- 2 Metal Carbides and Nitrides Electrocatalysts for Alcohol-assisted Water Electrolysis** 25
Phonnapha Tangthuam, Vipada Aupama, Ahmad Azmin Mohamad, and Soorathep Kheawhom
 - 2.1 Background and Scope 25

2.2	Intrinsic Properties Governing Electrocatalytic Activity	27
2.3	Catalytic Roles in Alcohol-assisted Electrolysis Systems	29
2.3.1	Cathode: HER	30
2.3.2	Anode: AOR	30
2.4	Surface Dynamics and Stability Under Operating Conditions	31
2.4.1	Surface Reconstruction as Activation and Degradation	32
2.4.2	Oxidation, Corrosion, and the Conductive-core/Active-shell Picture	33
2.4.3	Adsorbate-driven Effects and Selectivity Drift	33
2.4.4	Defects, Vacancies, and Stability–Activity Trade-offs	34
2.4.5	Electrode-level Stability	34
2.4.6	Assessing Stability in Hybrid Electrolysis	34
2.4.7	Design Implications	35
2.5	Reaction Pathways and Product Selectivity in Alcohol Oxidation	35
2.5.1	Elementary Steps and Pathway Competition	35
2.5.2	Adsorption Energetics as a Selectivity Lever	36
2.5.3	Surface Oxygenated Species and Reconstructed States	36
2.5.4	Poisoning, Carbon Balance, and Long-term Selectivity	36
2.5.5	Multicomponent Carbides and Nitrides in Selectivity Tuning	37
2.5.6	Selectivity Metrics and Benchmarking	37
2.6	Engineering Strategies to Enhance Performance	37
2.6.1	Nanostructuring and Hierarchical Porosity	38
2.6.2	Morphology and Surface Termination Control	39
2.6.3	Defect and Vacancy Engineering	39
2.6.4	Heteroatom Doping	39
2.6.5	Multicomponent Carbides and Nitrides	39
2.6.6	Heterostructures and Interfaces	40
2.6.7	Conductive Scaffolds and Self-supported Electrodes	40
2.6.8	Electrode Architecture and Transport	40
2.6.9	Benchmarking During Engineering Optimization	40
2.7	Comparative Summary of Carbides vs. Nitrides	40
2.8	Outlook and Remaining Challenges	41
	References	44
3	Single-atom Electrocatalysts for Alcohol-assisted Water Electrolysis	47
	<i>P. Keerthana, Soorya S. Raj, and M. L. Aruna Kumari</i>	
3.1	Introduction	47
3.2	Fundamentals of AAWE	49
3.2.1	Methanol-assisted Hydrogen Production	50
3.2.2	Ethanol-assisted Hydrogen Production	51
3.2.3	Propanol-assisted Hydrogen Production	52
3.2.4	Glycerol-assisted Hydrogen Production	52
3.3	SAECs: Concept and Design Principles	53
3.3.1	NM-SACs	54

3.3.2	SACs@ATMs	55
3.4	Synthesis Strategies of SAECs	58
3.4.1	Bottom-up Methods	58
3.4.1.1	Atomic Layer Deposition Method	58
3.4.1.2	Electrodeposition Method	59
3.4.1.3	Pyrolysis-assisted Method	60
3.4.1.4	Wet-chemical Synthesis	61
3.4.2	Top-down Method	62
3.5	Integration of SAECs into AAWE	63
3.6	Challenges and Perspectives	67
3.7	Conclusion	69
	References	69
4	Metal Alloys Electrocatalysts for Alcohol-assisted Water Electrolysis	81
	<i>Rafael M. P. Araujo, Sidney C. Z. Costa, M. Janete Giz, and Giuseppe A. Camara</i>	
4.1	Fundamentals of Water Electrolysis	81
4.2	Hybrid Water Electrolysis	82
4.3	Alcohol-assisted Water Electrolysis	82
4.4	Metal Alloys for Alcohol Electrooxidation	83
4.5	Metal Alloys for Hydrogen Evolution Reaction	88
4.6	Summary of the Current Landscape	89
	References	90
5	Metal Borides and Selenides for Alcohol-assisted Water Electrolysis	95
	<i>Yogapriya Selvaraj, Senthilkumar Nangan, Kiruthika Paramasivam, Anbazhagan Venkattappan, Vijayakumar Elayappan, and Soorathep Kheawhom</i>	
5.1	Introduction	95
5.2	Electrochemical Reactions Involved in OER, HER, and Alcohol Oxidation Reaction at Electrode Material	97
5.2.1	Mechanism of OER	97
5.2.2	Mechanism of HER	98
5.2.3	Mechanism of Alcohol Oxidation Reaction	99
5.3	Electrocatalytic Performance in Alcohol-assisted Electrolysis in Metal Borides and Selenides	100
5.3.1	Significance of HER	100
5.3.2	HER Activity of Borides and Selenides	101
5.3.2.1	HER Activity of Borides	101
5.3.2.2	HER Activity of Selenides	102
5.3.3	Synergistic Effects in Bimetallic or Hybrid Systems	104
5.4	Tafel Slope, Onset Potential, and Overpotential	105
5.4.1	Tafel Slope	105
5.4.2	Onset Potential	105

5.4.3	Overpotential	106
5.5	Alcohol Oxidation Reaction Mechanism of Ethanol, Methanol, and Glycerol Oxidation	107
5.5.1	Ethanol Oxidation	107
5.5.2	Methanol Oxidation	108
5.5.3	Glycerol Oxidation	110
5.5.4	Borides and Selenides as Anodic Catalysts	112
5.5.5	Selectivity and Product Distribution	114
5.5.6	Overall Electrolysis Performance	116
5.6	Challenges and Future Perspective	116
5.7	Conclusion	117
	Acknowledgments	118
	References	118
6	Non-oxide Electrocatalysts for Glycerol Oxidation-coupled Water Electrolysis	127
	<i>Phonnapha Tangthum, Vipada Aupama, and Soorathep Kheawhom</i>	
6.1	Introduction and Scope	127
6.2	Fundamentals of Glycerol Oxidation in Hybrid Electrolysis	129
6.2.1	Thermodynamic Comparison of OER and Glycerol Oxidation	130
6.2.2	Glycerol Oxidation Reaction Network	131
6.2.3	Performance Metrics for Glycerol-assisted Electrolysis	131
6.3	Non-oxide Electrocatalyst Families and Design Strategies for Glycerol Oxidation	132
6.3.1	Comparative Overview Under Glycerol Oxidation Conditions	132
6.3.2	Design Motifs Across Non-oxide Families	135
6.4	Mechanistic Insights: Activity and Selectivity Tuning on Non-oxide Surfaces	136
6.4.1	Active Phase and In Situ Reconstruction	136
6.4.2	Activity Descriptors	136
6.4.3	Selectivity: Glycerol Oxidation vs. OER and Within the Glycerol Network	139
6.4.4	Consolidated Design Rules	140
6.5	Durability, Poisoning, and Hybrid Electrolyzer Architectures	140
6.5.1	Degradation Modes	141
6.5.2	Strategies for Durability and Poisoning Resistance	142
6.5.3	Alkaline–Alkaline and Hybrid Alkali–Acid Architectures	143
6.5.4	Device-level Benchmarking	143
6.6	Operando Characterization and Future Directions	144
6.6.1	Role of Operando and In Situ Methods	144
6.6.2	Key Techniques	144
6.6.3	From Operando Data to Design Rules	146
6.6.4	Future Directions	146
	References	147

Part III Hydrazine-assisted Water Electrolysis 151

7 Metal Sulfides as Electrocatalysts for Hydrazine-assisted Water Electrolysis 153

Aravindhan Selvaraj, Hemalatha Parangusan, Dhanasekaran Vikraman, Hyun-Seok Kim, Akram Alfantazi, and K. Karuppasamy

- 7.1 Introduction 153
- 7.2 A Basic Understanding of N_2H_4 -assisted HER 154
 - 7.2.1 Parameters Required to Estimate the Catalytic Performance 154
 - 7.2.2 Exchange Current Density (j_0) and Tafel Slope 155
 - 7.2.3 Turnover Frequency 155
 - 7.2.4 Stability 156
- 7.3 Hydrazine-assisted HER Applications 156
 - 7.3.1 Nickel-based Catalysts 156
 - 7.3.2 Cobalt-based Catalysts 158
- 7.4 Design and Mechanism 160
- 7.5 Conclusion 161
- References 161

8 Metal Phosphides Electrocatalysts for Hydrazine-assisted Water Electrolysis 167

Rahul D. Kerkar

- 8.1 Introduction 167
- 8.2 Fundamentals of Hydrazine-assisted Water Electrolysis 170
- 8.3 Transition-metal Phosphides 171
 - 8.3.1 Structure, Electronic Properties, and Relevance to Electrocatalysis 171
 - 8.3.1.1 Crystal Structure and Classification of Metal Phosphides 171
 - 8.3.1.2 Electronic Structure and Conductivity 172
 - 8.3.1.3 Relevance to Electrocatalysis 173
 - 8.3.2 Synthesis Strategies for Metal Phosphides 174
 - 8.3.2.1 Phosphidation of Metal Hydroxide or Metal Oxide Precursors 174
 - 8.3.2.2 Direct Solid-state Reaction 175
 - 8.3.2.3 Hydrothermal Phosphidation 176
 - 8.3.2.4 CO_2 Laser-assisted Method 176
 - 8.3.2.5 Template or MOF-derived Methods 176
 - 8.3.2.6 Electrochemical In Situ Phosphidation 177
- 8.4 Characterization Techniques 177
 - 8.4.1 X-ray Diffraction 178
 - 8.4.2 Transmission Electron Microscopy 179
 - 8.4.3 X-ray Photoelectron Spectroscopy 179
 - 8.4.4 Inductively Coupled Plasma 180
 - 8.4.5 Study of Surface Area, Porosity, and Active Sites 180
- 8.5 Electrochemical Performance Evaluation 181
- 8.6 Post-characterization Techniques 183
- 8.7 Conclusion 184
- References 185

9 Metal Carbides and Nitrides Electrocatalysts for Hydrazine-assisted Water Electrolysis 191

Binaya Kumar Sahu and Pooja Sahoo

- 9.1 Introduction 191
- 9.2 Structure and Properties of Metal Carbides and Nitrides 194
- 9.3 Fundamentals of Hydrazine-assisted Water Catalysis for Hydrogen Production 198
- 9.4 Fundamentals of Hydrazine-assisted Water Catalysis for Fuel Cells 200
- 9.5 Measurement Criteria for HzOR-assisted Water Electrocatalysis 202
 - 9.5.1 Overpotential 202
 - 9.5.2 Tafel Slope 202
 - 9.5.3 Electrochemical Active Surface Area 203
 - 9.5.4 Electrochemical Impedance 203
 - 9.5.5 Stability 203
- 9.6 Metal Carbides for Hydrazine-assisted Water Electrocatalysis 204
- 9.7 Metal Nitrides for Hydrazine-assisted Water Electrocatalysis 209
- 9.8 Conclusion 212
- Acknowledgments 213
- References 213

10 Metal Alloy Electrocatalysts for Hydrazine-assisted Water Electrolysis 221

Shreyanka Shankar Naik

References 227

11 Metal Borides and Selenides for Hydrazine-assisted Water Electrolysis 231

Soumya Ranjan Mishra, Shalu Rawat, Vishwajit Chavda, and B. M. Nagaraja

- 11.1 Introduction 231
- 11.2 Fundamentals of Hz-WE 232
- 11.3 Chemistry and Structure of Metal Borides 234
 - 11.3.1 Structural Features and Stability 234
 - 11.3.2 Synthesis of Compositional Control 235
 - 11.3.3 Electrocatalytic Behavior in Hz-WE 236
- 11.4 Chemistry and Structure of Metal Selenides 237
 - 11.4.1 Structural Features and Stability 237
 - 11.4.2 Synthesis and Compositional Control 237
 - 11.4.3 Electrocatalytic Behavior in Hz-WE 238
- 11.5 Challenges and Future Prospects 241
- 11.6 Conclusion 242
- Acknowledgments 242
- References 243

12	Single-atom Electrocatalysts for Hydrazine-assisted Water Electrolysis	249
	<i>Talshyn Begildayeva and Juan A. Lopez-Ruiz</i>	
12.1	Introduction	249
12.2	SACs: What They Are, How They Work, and Why They Matter	251
12.3	HzOR as a Promising Alternative to the OER in Hybrid WE	256
12.4	Challenges for WE Coupled With Hydrazine Oxidation on SACs	261
	References	262
	Part IV Urea and Furfural-assisted Water Electrolysis	269
13	Metal Sulfides and Phosphides Electrocatalysts for Urea-assisted Water Electrolysis	271
	<i>Marcicelli Karoline Rodrigues de Souza, Eduardo dos Santos Freitas Cardoso, and Marcos Roberto de Vasconcelos Lanza</i>	
13.1	Introduction	271
13.2	The Mechanism Involving UOR in Alkaline Media	272
13.3	Synthesis of Sulfides and Phosphides-based Electrocatalysts	274
13.3.1	Integrated Techniques for the Synthesis of Sulfides and Phosphides-based Electrocatalysts	274
13.3.1.1	Hydrothermal, Solvothermal, and Electrochemical Synthesis Techniques	274
13.4	Structural and Catalytic Performances of Metal Sulfides and Phosphides	275
13.4.1	Morphological and Interface Engineering	276
13.4.1.1	Heterostructures Engineering	276
13.4.1.2	Incorporation of Conductivity Phases and Controlled Morphology	279
13.4.2	Compositional Modulation and Synergistic Effects	280
13.4.2.1	Bimetallic Integration and Controlled Doping	280
13.4.3	Hybrid Architectures and MOF-derived Platforms	282
13.4.4	Summary of Structure–Performance Relationship	285
13.5	Conclusions	288
	References	288
14	Metal Carbides and Nitrides Electrocatalysts for Urea and Furfural-assisted Water Electrolysis	293
	<i>Soorya S. Raj, M. L. Aruna Kumari, P. Keerthana</i>	
14.1	Introduction	293
14.2	Fundamentals of Urea and Furfural-assisted Water Electrolysis	294
14.2.1	Thermodynamics and Kinetics of UOR	294
14.2.2	FOR: Pathways and Value-added Products	295
14.2.3	Comparison with OER: Potential Reduction and Efficiency Gains	296

14.2.4	Dual Benefits: Sustainable Hydrogen Generation + Chemical Coproduction	296
14.3	MCNs as Electrocatalysts	297
14.3.1	Unique Physicochemical Properties	297
14.3.2	Synergy with Transition Metals for Enhanced Activity	297
14.3.3	Stability and Corrosion Resistance in Harsh Electrolytes	298
14.3.4	Structure–Activity Relationship Principles	298
14.4	Synthesis and Strategies	299
14.4.1	Carbothermal Reduction and Nitridation Methods	299
14.4.2	Template-assisted Synthesis	300
14.4.3	Sol–Gel and Hydrothermal Approaches	300
14.4.4	Plasma-enhanced and CVD Techniques	300
14.4.5	Challenges in Phase Control, Morphology, and Scalability	300
14.5	MCNs for UOR	302
14.5.1	Molybdenum and Tungsten Carbides/Nitrides	302
14.5.2	Iron, Cobalt, and Nickel Carbides/Nitrides	302
14.5.3	Mixed-metal Carbides and Nitrides	303
14.5.4	Reaction Mechanism Insights and Performance Benchmarks	303
14.6	MCNs for FOR	303
14.6.1	Ni-, Mo-, and Co-based Carbides/Nitrides for Furfural Valorization	304
14.6.2	Selectivity Control and Product Distribution	304
14.6.3	Coupling Furfural Oxidation with HER	305
14.7	Challenges and Future Perspectives	306
14.8	Conclusion	306
	References	307
15	Metal Sulfides and Phosphides Electrocatalysts for Furfural-assisted Water Electrolysis	313
	<i>Jessica J. P. Nascimento, Paulo N. S. Casciano, Francisco W. P. Ribeiro, Thiago M. B. F. Oliveira, Adriana N. Correia, and Pedro de Lima-Neto</i>	
15.1	Introduction	313
15.2	Importance of Transition-metal-based Catalysts	315
15.3	Electrocatalytic Performance for FF Compounds Oxidation and HER	317
15.3.1	Metal Phosphides Electrocatalysts for FF-assisted Water Electrolysis	319
15.3.2	Metal Sulfides Electrocatalysts for FF-assisted Water Electrolysis	321
15.4	Pathways of FF Oxidation Reaction	324
15.4.1	Pathways in Acidic Media	324
15.4.2	Pathways in Alkaline/Neutral Media	324
15.4.3	Electrochemical Synergy Between FOR and HER	326
15.5	Challenges and Prospects	327

16 Single-atom Electrocatalysts for Urea and Furfural-assisted Water Electrolysis 337

Xiangyu You, Julio C. Lourenço, Tulio P. Porto, Dhananjai Pangotra, Luciana Vieira, Huize Wang, Marc Ledendecker, Robson S. Rocha, Alexsandro J. dos Santos, Marcos Roberto de Vasconcelos Lanza, Gilberto Maia, and Guilherme V. Fortunato

16.1 Introduction 338

16.2 Fundamentals of Single-atom Electrocatalysts 338

16.2.1 Definition and Features of SACs 338

16.2.2 Common Synthesis Methods 340

16.2.3 Characterization Techniques 341

16.3 Advantages of Using SACs for Electrooxidation Reactions and the Stability Issues 342

16.4 UOR and SACs 343

16.4.1 Mechanisms of UOR, Kinetics, and Energy Advantages Compared to OER 343

16.4.2 State-of-the-art Electrocatalysts and the Advantages of SACs for UOR 345

16.4.3 Long-term Stability and Practical Perspectives of SACs for UOR 346

16.5 Furfural Oxidation and SACs 347

16.5.1 Oxidation Pathways and Products of Furfural 347

16.5.2 Electrocatalysts for FOR and Opportunities for SACs 349

16.6 Hybrid Electrolyzer Configuration, Integration, and Challenges of Using SACs 350

16.6.1 System-level Considerations 350

16.6.2 Catalyst-level Considerations and SAC Challenges 351

16.6.3 Selectivity–Current Density Trade-offs 353

16.7 Conclusion 353

References 354

17 Non-oxide Electrocatalysts for Glucose-oxidation-coupled Water Electrolysis 365

P. H. Gangadharagowda, K. Chandana, S. K. Vinoth, K. Yogesh Kumar, and Arun Varghese

17.1 Introduction 365

17.2 Importance of Glucose-oxidation-coupled Water Electrolysis 367

17.3 Performance Evaluation Using Non-oxide Electrocatalysts 370

17.4 Conclusions and Future Perspectives 380

References 380

Part V Future Prospects 385

18 Future Prospects and Commercialization of Energy-saving Hybrid Water Electrolysis 387

Juan A. Lopez-Ruiz and Talshyn Begildayeva

- 18.1 Introduction 387
- 18.2 Bridging the Lab-to-plant Divide in Electrolyzers 388
- 18.3 Key Performance Indicators 393
 - 18.3.1 Normalized Reaction Rates 394
 - 18.3.2 Energy Consumption and Efficiency 396
- 18.4 Process Consideration 397
 - 18.4.1 Integration of Oxidation and Reduction Processes into a Single Unit 398
 - 18.4.2 Mild Operation Conditions 401
 - 18.4.3 Simpler and Safer Operation 401
 - 18.4.4 Electrification With Diverse Sources 402
- 18.5 Scale-up Considerations 402
 - 18.5.1 Electrolyzer Design 403
 - 18.5.2 Component Manufacturing 404
 - 18.5.3 Dynamic Operations and Advanced Controls 405
- 18.6 Future Research Direction and Commercialization Strategies 406
- References 409

Index 415
