Preface XIII

Part One Coherent States 1

1	Introduction	3
1.1	The Motivations	3
2	The Standard Coherent States: the Basics	13
2.1	Schrödinger Definition	13
2.2	Four Representations of Quantum States	13
2.2.1	Position Representation	14
2.2.2	Momentum Representation	14
2.2.3	Number or Fock Representation	15
2.2.4	A Little (Lie) Algebraic Observation	16
2.2.5	Analytical or Fock–Bargmann Representation	16
2.2.6	Operators in Fock–Bargmann Representation	17
2.3	Schrödinger Coherent States	18
2.3.1	Bergman Kernel as a Coherent State	18
2.3.2	A First Fundamental Property	19
2.3.3	Schrödinger Coherent States in the Two Other Representations	19
2.4	Glauber–Klauder–Sudarshan or Standard Coherent States	20
2.5	Why the Adjective <i>Coherent</i> ?	20
3	The Standard Coherent States: the (Elementary) Mathematics	25
3.1	Introduction	25
3.2	Properties in the Hilbertian Framework	26
3.2.1	A “Continuity” from the Classical Complex Plane to Quantum States	26
3.2.2	“Coherent” Resolution of the Unity	26
3.2.3	The Interplay Between the Circle (as a Set of Parameters) and the Plane (as a Euclidean Space)	27
3.2.4	Analytical Bridge	28
3.2.5	Overcompleteness and Reproducing Properties	29
3.3	Coherent States in the Quantum Mechanical Context	30
3.3.1	Symbols	30
3.3.2	Lower Symbols	30

3.3.3	Heisenberg Inequalities	31
3.3.4	Time Evolution and Phase Space	32
3.4	Properties in the Group-Theoretical Context	35
3.4.1	The Vacuum as a Transported Probe . . .	35
3.4.2	Under the Action of . . .	36
3.4.3	. . . the D -Function	37
3.4.4	Symplectic Phase and the Weyl–Heisenberg Group	37
3.4.5	Coherent States as Tools in Signal Analysis	38
3.5	Quantum Distributions and Coherent States	40
3.5.1	The Density Matrix and the Representation “ \mathcal{R} ”	41
3.5.2	The Density Matrix and the Representation “ \mathcal{Q} ”	41
3.5.3	The Density Matrix and the Representation “ \mathcal{P} ”	42
3.5.4	The Density Matrix and the Wigner(–Weyl–Ville) Distribution	43
3.6	The Feynman Path Integral and Coherent States	44
4	Coherent States in Quantum Information: an Example of Experimental Manipulation	49
4.1	Quantum States for Information	49
4.2	Optical Coherent States in Quantum Information	50
4.3	Binary Coherent State Communication	51
4.3.1	Binary Logic with Two Coherent States	51
4.3.2	Uncertainties on POVMs	51
4.3.3	The Quantum Error Probability or Helstrom Bound	52
4.3.4	The Helstrom Bound in Binary Communication	53
4.3.5	Helstrom Bound for Coherent States	53
4.3.6	Helstrom Bound with Imperfect Detection	54
4.4	The Kennedy Receiver	54
4.4.1	The Principle	54
4.4.2	Kennedy Receiver Error	55
4.5	The Sasaki–Hirota Receiver	56
4.5.1	The Principle	56
4.5.2	Sasaki–Hirota Receiver Error	56
4.6	The Dolinar Receiver	57
4.6.1	The Principle	57
4.6.2	Photon Counting Distributions	58
4.6.3	Decision Criterion of the Dolinar Receiver	58
4.6.4	Optimal Control	59
4.6.5	Dolinar Hypothesis Testing Procedure	60
4.7	The Cook–Martin–Geremia Closed-Loop Experiment	61
4.7.1	A Theoretical Preliminary	61
4.7.2	Closed-Loop Experiment: the Apparatus	63
4.7.3	Closed-Loop Experiment: the Results	65
4.8	Conclusion	67
5	Coherent States: a General Construction	69
5.1	Introduction	69

5.2	A Bayesian Probabilistic Duality in Standard Coherent States	70
5.2.1	Poisson and Gamma Distributions	70
5.2.2	Bayesian Duality	71
5.2.3	The Fock–Bargmann Option	71
5.2.4	A Scheme of Construction	72
5.3	General Setting: “Quantum” Processing of a Measure Space	72
5.4	Coherent States for the Motion of a Particle on the Circle	76
5.5	More Coherent States for the Motion of a Particle on the Circle	78
6	The Spin Coherent States	79
6.1	Introduction	79
6.2	Preliminary Material	79
6.3	The Construction of Spin Coherent States	80
6.4	The Binomial Probabilistic Content of Spin Coherent States	82
6.5	Spin Coherent States: Group-Theoretical Context	82
6.6	Spin Coherent States: Fock–Bargmann Aspects	86
6.7	Spin Coherent States: Spherical Harmonics Aspects	86
6.8	Other Spin Coherent States from Spin Spherical Harmonics	87
6.8.1	Matrix Elements of the $SU(2)$ Unitary Irreducible Representations	87
6.8.2	Orthogonality Relations	89
6.8.3	Spin Spherical Harmonics	89
6.8.4	Spin Spherical Harmonics as an Orthonormal Basis	91
6.8.5	The Important Case: $\sigma = j$	91
6.8.6	Transformation Laws	92
6.8.7	Infinitesimal Transformation Laws	92
6.8.8	“Sigma-Spin” Coherent States	93
6.8.9	Covariance Properties of Sigma-Spin Coherent States	95
7	Selected Pieces of Applications of Standard and Spin Coherent States	97
7.1	Introduction	97
7.2	Coherent States and the Driven Oscillator	98
7.3	An Application of Standard or Spin Coherent States in Statistical Physics: Superradiance	103
7.3.1	The Dicke Model	103
7.3.2	The Partition Function	105
7.3.3	The Critical Temperature	106
7.3.4	Average Number of Photons per Atom	108
7.3.5	Comments	109
7.4	Application of Spin Coherent States to Quantum Magnetism	109
7.5	Application of Spin Coherent States to Classical and Thermodynamical Limits	111
7.5.1	Symbols and Traces	112
7.5.2	Berezin–Lieb Inequalities for the Partition Function	114
7.5.3	Application to the Heisenberg Model	116

8	$SU(1,1)$ or $SL(2,\mathbb{R})$ Coherent States	117
8.1	Introduction	117
8.2	The Unit Disk as an Observation Set	117
8.3	Coherent States	119
8.4	Probabilistic Interpretation	120
8.5	Poincaré Half-Plane for Time-Scale Analysis	121
8.6	Symmetries of the Disk and the Half-Plane	122
8.7	Group-Theoretical Content of the Coherent States	123
8.7.1	Cartan Factorization	123
8.7.2	Discrete Series of $SU(1,1)$	124
8.7.3	Lie Algebra Aspects	126
8.7.4	Coherent States as a Transported Vacuum	127
8.8	A Few Words on Continuous Wavelet Analysis	129
9	Another Family of $SU(1,1)$ Coherent States for Quantum Systems	135
9.1	Introduction	135
9.2	Classical Motion in the Infinite-Well and Pöschl–Teller Potentials	135
9.2.1	Motion in the Infinite Well	136
9.2.2	Pöschl–Teller Potentials	138
9.3	Quantum Motion in the Infinite-Well and Pöschl–Teller Potentials	141
9.3.1	In the Infinite Well	141
9.3.2	In Pöschl–Teller Potentials	142
9.4	The Dynamical Algebra $\mathfrak{su}(1,1)$	143
9.5	Sequences of Numbers and Coherent States on the Complex Plane	146
9.6	Coherent States for Infinite-Well and Pöschl–Teller Potentials	150
9.6.1	For the Infinite Well	150
9.6.2	For the Pöschl–Teller Potentials	152
9.7	Physical Aspects of the Coherent States	153
9.7.1	Quantum Revivals	153
9.7.2	Mandel Statistical Characterization	155
9.7.3	Temporal Evolution of Symbols	158
9.7.4	Discussion	162
10	Squeezed States and Their $SU(1,1)$ Content	165
10.1	Introduction	165
10.2	Squeezed States in Quantum Optics	166
10.2.1	The Construction within a Physical Context	166
10.2.2	Algebraic ($\mathfrak{su}(1,1)$) Content of Squeezed States	171
10.2.3	Using Squeezed States in Molecular Dynamics	175
11	Fermionic Coherent States	179
11.1	Introduction	179
11.2	Coherent States for One Fermionic Mode	179
11.3	Coherent States for Systems of Identical Fermions	180
11.3.1	Fermionic Symmetry $SU(r)$	180
11.3.2	Fermionic Symmetry $SO(2r)$	185

11.3.3	Fermionic Symmetry $SO(2r + 1)$	187
11.3.4	Graphic Summary	188
11.4	Application to the Hartree–Fock–Bogoliubov Theory	189
Part Two Coherent State Quantization 191		
12	Standard Coherent State Quantization: the Klauder–Berezin Approach	193
12.1	Introduction	193
12.2	The Berezin–Klauder Quantization of the Motion of a Particle on the Line	193
12.3	Canonical Quantization Rules	196
12.3.1	Van Hove Canonical Quantization Rules [161]	196
12.4	More Upper and Lower Symbols: the Angle Operator	197
12.5	Quantization of Distributions: Dirac and Others	199
12.6	Finite-Dimensional Canonical Case	202
13	Coherent State or Frame Quantization	207
13.1	Introduction	207
13.2	Some Ideas on Quantization	207
13.3	One more Coherent State Construction	209
13.4	Coherent State Quantization	211
13.5	A Quantization of the Circle by 2×2 Real Matrices	214
13.5.1	Quantization and Symbol Calculus	214
13.5.2	Probabilistic Aspects	216
13.6	Quantization with k -Fermionic Coherent States	218
13.7	Final Comments	220
14	Coherent State Quantization of Finite Set, Unit Interval, and Circle	223
14.1	Introduction	223
14.2	Coherent State Quantization of a Finite Set with Complex 2×2 Matrices	223
14.3	Coherent State Quantization of the Unit Interval	227
14.3.1	Quantization with Finite Subfamilies of Haar Wavelets	227
14.3.2	A Two-Dimensional Noncommutative Quantization of the Unit Interval	228
14.4	Coherent State Quantization of the Unit Circle and the Quantum Phase Operator	229
14.4.1	A Retrospective of Various Approaches	229
14.4.2	Pegg–Barnett Phase Operator and Coherent State Quantization	234
14.4.3	A Phase Operator from Two Finite-Dimensional Vector Spaces	235
14.4.4	A Phase Operator from the Interplay Between Finite and Infinite Dimensions	237
15	Coherent State Quantization of Motions on the Circle, in an Interval, and Others	241
15.1	Introduction	241
15.2	Motion on the Circle	241

15.2.1	The Cylinder as an Observation Set	241
15.2.2	Quantization of Classical Observables	242
15.2.3	Did You Say <i>Canonical</i> ?	243
15.3	From the Motion of the Circle to the Motion on $1 + 1$ de Sitter Space-Time	244
15.4	Coherent State Quantization of the Motion in an Infinite-Well Potential	245
15.4.1	Introduction	245
15.4.2	The Standard Quantum Context	246
15.4.3	Two-Component Coherent States	247
15.4.4	Quantization of Classical Observables	249
15.4.5	Quantum Behavior through Lower Symbols	253
15.4.6	Discussion	254
15.5	Motion on a Discrete Set of Points	256
16	Quantizations of the Motion on the Torus	259
16.1	Introduction	259
16.2	The Torus as a Phase Space	259
16.3	Quantum States on the Torus	261
16.4	Coherent States for the Torus	265
16.5	Coherent States and Weyl Quantizations of the Torus	267
16.5.1	Coherent States (or Anti-Wick) Quantization of the Torus	267
16.5.2	Weyl Quantization of the Torus	267
16.6	Quantization of Motions on the Torus	269
16.6.1	Quantization of Irrational and Skew Translations	269
16.6.2	Quantization of the Hyperbolic Automorphisms of the Torus	270
16.6.3	Main Results	271
17	Fuzzy Geometries: Sphere and Hyperboloid	273
17.1	Introduction	273
17.2	Quantizations of the 2-Sphere	273
17.2.1	The 2-Sphere	274
17.2.2	The Hilbert Space and the Coherent States	274
17.2.3	Operators	275
17.2.4	Quantization of Observables	275
17.2.5	Spin Coherent State Quantization of Spin Spherical Harmonics	276
17.2.6	The Usual Spherical Harmonics as Classical Observables	276
17.2.7	Quantization in the Simplest Case: $j = 1$	276
17.2.8	Quantization of Functions	277
17.2.9	The Spin Angular Momentum Operators	277
17.3	Link with the Madore Fuzzy Sphere	278
17.3.1	The Construction of the Fuzzy Sphere à la Madore	278
17.3.2	Operators	280
17.4	Summary	282
17.5	The Fuzzy Hyperboloid	283

18	Conclusion and Outlook	287
	Appendix A The Basic Formalism of Probability Theory	289
A.1	Sigma-Algebra	289
A.1.1	Examples	289
A.2	Measure	290
A.3	Measurable Function	290
A.4	Probability Space	291
A.5	Probability Axioms	291
A.6	Lemmas in Probability	292
A.7	Bayes's Theorem	292
A.8	Random Variable	293
A.9	Probability Distribution	293
A.10	Expected Value	294
A.11	Conditional Probability Densities	294
A.12	Bayesian Statistical Inference	295
A.13	Some Important Distributions	296
A.13.1	Degenerate Distribution	296
A.13.2	Uniform Distribution	296
	Appendix B The Basics of Lie Algebra, Lie Groups, and Their Representations	303
B.1	Group Transformations and Representations	303
B.2	Lie Algebras	304
B.3	Lie Groups	306
B.3.1	Extensions of Lie algebras and Lie groups	310
	Appendix C $SU(2)$ Material	313
C.1	$SU(2)$ Parameterization	313
C.2	Matrix Elements of $SU(2)$ Unitary Irreducible Representation	313
C.3	Orthogonality Relations and $3j$ Symbols	314
C.4	Spin Spherical Harmonics	315
C.5	Transformation Laws	317
C.6	Infinitesimal Transformation Laws	318
C.7	Integrals and $3j$ Symbols	319
C.8	Important Particular Case: $j = 1$	320
C.9	Another Important Case: $\sigma = j$	321
	Appendix D Wigner–Eckart Theorem for Coherent State Quantized Spin Harmonics	323
	Appendix E Symmetrization of the Commutator	325
	References	329
	Index	339
