Preface XI

1	Introduction	1
	References	4
2	Physical Backgrounds for Practical Applications of Liquid Crystals	7
2.1	Anisotropy of Physical Properties of Liquid Crystals	7
2.1.1	Liquid Crystal Molecules and Phases	7
2.1.2	Nonliquid Crystal Compounds	12
2.1.3	Typical Methods of Liquid Crystal Material Preparation for Various Applications	14
2.1.4	Basic Physical Properties	16
2.1.4.1	Dielectric Properties	17
2.1.4.2	Optical Anisotropy	21
2.1.4.3	Viscoelastic Properties	24
2.1.4.4	Elasticity	24
2.1.4.5	Viscosity	26
2.2	Liquid Crystal Alignment on the Surface	30
2.2.1	Types of Liquid Crystal Alignment	31
2.2.1.1	Electrooptical Cells	31
2.2.1.2	Planar (Homogeneous) Orientation	32
2.2.1.3	Homeotropic Orientation	34
2.2.1.4	Tilted Orientation	36
2.2.1.5	Other Types of Liquid Crystal Alignment	37
2.2.2	Surface Energy	39
2.3	Liquid Crystals Under Magnetic and Electric Fields	41
	References	42

3	Flows of Anisotropic Liquids	45
3.1	Couette and Poiseuille Flows in Isotropic Liquids and Liquid Crystals	45
3.2	Hydrodynamic Instabilities in Couette and Poiseuille Steady Shear Flows	48
3.3	Steady Flows of Liquid Crystals	49
3.3.1	Homogeneous Instability at Initial Planar Orientation Normal to the Flow Plane	49
3.3.2	Periodic Instability at Initial Planar Orientation Normal to the Flow Plane	54
3.3.3	Instability at Initial Planar Orientation in the Flow Plane	54
3.3.4	Hydrodynamic Instabilities at Initial Homeotropic Orientation	55
3.3.5	Orientational Instability in a Nematic Liquid Crystal in a Decaying Poiseuille Flow	58
3.3.6	Influence of a Decay Flow on Electrohydrodynamic Instability in Liquid Crystals	64
3.4	Hydrodynamic Instabilities Under Oscillating Flows	66
3.4.1	Oscillating Couette Flow	66
3.4.2	Oscillating Poiseuille Flow: Planar Orientation	68
3.4.3	Oscillating Poiseuille Flow: Homeotropic Orientation	70
3.4.3.1	Experimental Setup for Low-Frequency Poiseuille Flow	71
3.4.3.2	Linear In-Plane Motion of a Director Under Oscillating Poiseuille Flow	74
3.4.3.3	Hydrodynamic Instabilities Under Oscillating Poiseuille Flows	81
3.5	Secondary Instabilities in Poiseuille Flows	90
3.5.1	Domain Walls	90
3.5.2	Secondary Roll Instability in Oscillating Flow	90
3.5.3	Long-Living Domains Produced by Flows	93
3.6	Shear Flows at Weak Anchoring	95
3.6.1	Linear Oscillating Flows at Weak Anchoring	95
3.6.1.1	General Equations	96
3.6.1.2	Linear Oscillating Flow at Symmetrical Boundary Conditions	98
3.6.1.3	Linear Oscillating Flow at Hybrid Boundary Conditions	100
3.6.1.4	Experimental Technique and Results	101
3.6.2	Hydrodynamic Instabilities at Weak Anchoring	103
	References	106
4	Ultrasound in Liquid Crystals	111
4.1	Methods and Technique of Ultrasonic Investigations of Liquids and Liquid Crystals: Longitudinal Waves	111
4.1.1	Impulse Method	114
4.1.2	Resonator Method	117
4.1.3	Ultrasonic Technique for the Study of Liquid Crystals	118
4.1.3.1	Peculiarities of Ultrasonic Investigations of Liquid Crystals	118
4.1.3.2	Ultrasonic Chambers for the Study of Liquid Crystals	119

4.2	Ultrasonic Viscosimetry of Nematic Liquid Crystals	121
4.2.1	Theoretical Background	121
4.2.2	Experimental Confirmation	126
4.2.2.1	Static Regime	126
4.2.2.2	Dynamic Regime	130
4.3	Shear Waves in Liquid Crystals	134
4.3.1	Shear Waves in Isotropic Liquids	134
4.3.2	Peculiarities of Shear Waves in Liquid Crystals	136
4.3.3	Experimental Methods for Shear Wave Studies	137
4.4	Ultrasonic Parameters and Viscoelastic Properties at Phase Transitions	142
4.4.1	Phase Transitions and Critical Phenomena in Liquid Crystals: General Aspects and Peculiarities of Ultrasonic Studies	142
4.4.2	Nematic–Isotropic Transition	144
4.4.3	Nematic–Smectic A Transition	148
4.4.4	Critical Dynamics and Viscoelastic Properties at Smectic A–Smectic C Phase Transition	155
4.4.5	Ultrasonic Studies of Phase Transitions in Confined Liquid Crystal Systems	167
	References	173
5	Experimental Determination of Elastic and Viscous Parameters of Liquid Crystals	179
5.1	Methods for Measurements of Frank's Elastic Constants of Liquid Crystals	179
5.1.1	Optical Methods Based on Fréedericksz Transition	180
5.1.2	Light Scattering Method	186
5.2	Rotational Viscosity of Nematic and Smectic C Liquid Crystals: Experimental Methods and Techniques	195
5.2.1	Measurements in Bulk Samples of Nematic Liquid Crystals	195
5.2.1.1	Method of Rotating Magnetic Field	196
5.2.1.1.1	Permanent Rotation of Magnetic Field	196
5.2.1.1.2	Step-Like Rotation of Magnetic Field	199
5.2.2	Measurements in Thin Layers of Nematics	200
5.2.3	Rotational Viscosity of Smectic C Phase	206
5.3	Viscosimetry of Liquid Crystals in Shear Flows	220
5.3.1	Measurements of Anisotropic Shear Viscosities in Flows of Liquid Crystals Stabilized by Fields	222
5.3.1.1	Poiseuille Flow in Flat Capillary	223
5.3.1.2	Direct Determination of Shear Viscosity Coefficients in a Simple Shear Flow	229
5.3.1.2.1	Viscosity Measurements at a Steady Simple Shear Flow	229
5.3.1.2.2	Measurements in Low-Frequency Oscillating Flows	230
5.3.2	Measurements of Anisotropic Shear Viscosities in Flows of Liquid Crystals Stabilized by Surfaces	232

5.4	Optical Methods for the Measurement of Leslie Coefficients	240
5.4.1	Flow Alignment Measurements	241
5.4.1.1	Measurement in a Steady Simple Shear Flow	241
5.4.1.2	Measurement in Oscillating Simple Shear Flows	243
5.4.2	Measurements by Using Quasielastic Light Scattering	244
5.4.3	Determination of Leslie Coefficients from the Dynamics of Fréedericksz Transitions	249
5.5	Methods for Studying Surface Anchoring and Surface Dynamics of Liquid Crystals	252
5.5.1	Surface Anchoring Parameters	252
5.5.2	Methods of Measuring Surface Anchoring Strength	254
5.5.2.1	Field-Off Techniques	254
5.5.2.1.1	Light Scattering Methods	255
5.5.2.1.2	Torque Balance Method	257
5.5.2.2	Field-On Techniques	258
5.5.3	Surface Dynamics of Liquid Crystals	264
	References	273
6	Liquid Crystals for Display and Photonics Applications	283
6.1	Electrooptical Effects in Liquid Crystals	283
6.1.1	Electrically Controlled Birefringence	283
6.1.1.1	Static Director Distribution	283
6.1.1.2	Effect of a Weak Anchoring at the Boundaries	285
6.1.1.3	Dynamics of the Director Motion: Backflow Effect	287
6.1.1.4	Optical Response	289
6.1.2	Twist Effect	296
6.1.2.1	Effect of the Cell Geometry and Liquid Crystal Parameters on the Steepness of the Transmission–Voltage Curve and its Correlation with the Information Content of Passively Addressed LCDs	298
6.1.2.1.1	Twist-Cell Geometry for Zero Voltage: Mauguin Conditions	298
6.1.2.1.2	Transmission–Voltage Curve for Normal Light Incidence	300
6.1.2.1.3	Viewing Angle Dependences of Twist LCDs	303
6.1.2.1.4	Principles of Passive Matrix Addressing of Twist LCDs	305
6.1.2.1.5	Dynamics of the Twist Effect	307
6.1.2.1.6	New Developments	308
6.1.3	Supertwist Effects	310
6.1.3.1	Discovery of Supertwist Effect for LCDs: SBE Mode	310
6.1.3.2	Various Supertwist Modes	313
6.1.3.3	Dependence of TVC Steepness on the Material and Construction Parameters	314
6.1.3.4	Supertwisted LCDs with Improved Characteristics: STN-LCDs with Phase Retardation Plates	315
6.1.3.5	Double-STN-Cell (DSTN) Configuration: Triple STN Subtractive Color System	316
6.1.3.6	Multiline Addressing: Shadowing	317

6.1.4	Electrooptical Modes in Cholesterics	318
6.1.4.1	Selective Reflection Band	318
6.1.4.2	Unwinding of a Cholesteric Helix	319
6.1.4.3	Linear Flexoelectric Effect	319
6.1.4.4	Reflective Cholesteric Structures	320
6.1.5	Electrooptic Effects in Ferroelectric LC	323
6.1.5.1	Basic Physical Properties	323
6.1.5.1.1	Structure and Symmetry	323
6.1.5.1.2	Main Physical Parameters	324
6.1.5.1.3	Tilt Angle	324
6.1.5.1.4	Spontaneous Polarization	324
6.1.5.1.5	Rotational Viscosities	324
6.1.5.1.6	Helix Pitch	326
6.1.5.1.7	Dielectric and Optical Properties	326
6.1.5.1.8	Elastic Properties and Anchoring Energy	328
6.1.5.1.9	Aligning and Textures	330
6.1.5.1.10	Electrooptic Effects in FLC Cells	333
6.1.5.1.11	Addressing Principles of Passive Ferroelectric LCDs	342
6.2	Liquid Crystal Display Optimization	346
6.2.1	Various LCD Addressing Schemes	346
6.2.2	Passive Matrix Displays	348
6.2.3	Active Matrix Displays	351
6.2.4	Low Power Consumption LCD with Memory Effects	356
6.2.4.1	Surface Bistability	356
6.2.4.1.1	BTN with $0 \Leftrightarrow \pi$ Twist Angle Switching	356
6.2.4.1.2	Zenithal Bistability (ZBD)	358
6.2.4.1.3	Optically Rewritable LCDs	358
6.3	LC Applications in Photonics: Passive Optical Elements for Fiber Optical Communication Systems	360
6.3.1	LC Switches	361
6.3.2	Other LC Passive Elements for Photonics Applications	364
6.3.3	Photonic Crystal/Liquid Crystal Structures	367
6.3.4	Photoalignment Technology for LC Photonics Devices	368
	References	372
7	Liquid Crystal Sensors	379
7.1	Liquid Crystals as Sensors of Mechanical Perturbations: Physical Background and Main Characteristics	379
7.2	Technical Parameters of Liquid Crystal Sensors of the Pressure Gradient: Ways of Optimization	384
7.2.1	Decreasing Threshold Pressure Gradient via Choice of Optimal Geometry	384
7.2.2	Use of Electric Fields	387
7.3	Liquid Crystal Sensors of Pressure, Acceleration, Vibrations, and Inclination	394

7.3.1	Liquid Crystal Sensors of Differential Pressure	394
7.3.2	Liquid Crystal Sensors of Acceleration, Vibrations, and Inclination	398
7.4	Liquid Crystals for the Control of Liquid and Gas Flows	402
7.5	Application of Liquid Crystals for Detecting and Visualizing Acoustic Fields	405
7.5.1	Acoustic Flows in Liquid Crystals	406
7.5.2	Acoustooptical Effects on Liquid Crystals in the Presence of Electric and Magnetic Fields	408
	References	413
	Index	417
