command and control 402, 422

Agent-Directed Simulation and Systems Engineering. Edited by Levent Yilmaz and Tuncer Ören

ISBN: 978-3-527-40781-1

Common Operational and Tactical Picture 179
communication 175, 270, 434
community of practice 482
complexity 113, 219
computational paradigms 115
– goal-directed knowledge processing 116
– agent-based paradigm 116
– AI-based paradigm 116
– event-based paradigm 116
– intentional knowledge processing 115
– procedural knowledge processing 115
computer-aided modeling 11
conflict resolution 434
control 153

d
decision making 258
decision support 87
decision support simulation systems 399, 401, 405, 411
decision support systems 399–400, 404–405
decomposition analysis and resolution 372
deliberative agents 89
Design 318–319
DEVS 11
DEVS model 363
discrete-event models 436
dynamic composability 135

e
emergent organizational behavior 241
evaluation environment 184
– indicator hierarchy 185
event scheduling 436
evolutionary algorithm 342
experimental frame 366

f
facility layout 456
false alarms 408–409, 411
flexibility 82
flexible manufacturing system 457
functional analysis 153
functional engineering simulator 324
functional validation testbench 324

g
GA 341, 343
genetic algorithm controller 53
Global Information Grid (GIG) 381

h
holon 466
holonic manufacturing system 466
House Resolution 487 3
human-automation 406
human behavior 88
human complex systems 336
hybrid agent architectures 43

i
imitation 7
inference engine 176
information assurance 179
integrated development and testing methodology 388
integration 318
intelligence, surveillance, and reconaissance 179
intelligent agents 111
interoperation 135
– broker agent 138–139
– facilitator agent 137
– mediator agent 137
introspection layer 44

j
joint mission thread 378

k
knowledge base 176
knowledge generation activity 12
knowledge processing 9

l
layered approach 271
learning in agents 129
life cycle 158

m
M&S 3
– decision support 4
– education 4
– experience 4
– experimentation 6
– understanding 4
management 149
manufacturing systems 452
– cellular manufacturing 457
– facility layout 456
– flexible manufacturing system 457
– holonic manufacturing system 466
– holon 466
– material handling 457
mapping 413
Mason 271, 289
MASs 271, 275, 291, 305, 308

material handling 457
metamodel 412
metasimulator 132
model analysis 15
model base 375
model-based activity 11, 13
– model-based management 13
– model-building 13
– model processing 13
– behavior generation 15
– model analysis 15
– model transformation 15
model-based management 11, 15
model behavior 19
– point behavior 19
– structural behavior 19
– trajectory behavior 19
model-driven enterprise information systems 11
model transformation 16
modeling 3
multiagent systems 241, 269
– designed 241
– emergent 241
multicriteria decision making 185
multimodel 132, 411, 415, 417
– multi-aspect multimodel 132
– multistage multimodel 132
multisimulation 131–132, 411, 417, 423
– metasimulator 132
– model recommendation 133
multistage models 417

n
net-centric infrastructure 380
NetLogo 271, 280–281
network-centric system 177
– Common Open Policy Service 177
– Directory Enabled Networking 177
– Internet Protocol Security Policy 177
– Network Data Management Protocol 177
– Simple Object Access Protocol 177

o
open system architectures 180, 186
open systems 174
– autonomy 174
– dynamism 175
– heterogeneity 175
operational view 180
organization 238, 434
– computational organization 238
– organizational change 248
– organizational structure 240
– adhocracy 240
– entrepreneurial 240
– machine 240
– professional 240
– resource capacity 243
– task complexity 243
– volatility 243
– organizational utility 247
organization theory 240
organizational design 240
organizational structure 237

p
partial model ensemble 48
particle swarm optimization 50
perception 99, 401, 410, 412
performance estimation 318–319
Petri-net 436
pruned entity structure 385

q
quality 173
quality assessment 184
quality assurance 176

r
reflection 81
reliability 407, 424–425
reorganization 238, 244
RePast 271, 283
requirements analysis 153, 318–319
requirements management and verification 326
resolution 412–413
risk 165
robustness 41

s
scope 412–413
self-organization 40, 50
self-organizing system 40
sense-making 80
service-oriented architecture 306
simulation 3
simulation-based augmented reality 13
simulation-based decision support 38
simulation for agents 112
situated environment 78, 100
situatedness 77
sociotechnical work system 504
software agents 113
