а

Abelian orbifold, 321, 324 Abelian quivers, 321 Action, gauge invariant and background field, 241 Adler-Bardeen theorem, 126 Annihilation cross-section electron-positron, 252 Anomalous dimension, 231 gamma γ_F (diagram), 235 for nonsinglet moments, 235 Anomalous dimension functions (beta and gamma) and scaling violations, 229 Anomalous moment theoretical and experimental values, 121 Anomaly Adler-Bardeen theorem, 126 triangle, 126 triangle, square and pentagon diagrams, 126 Anomaly free condition for quantum flavor dynamics, 136 Anticommutation relations in closed loop Feynman rules for Yang-Mills theory, 72 Antineutrino creation in Dirac field, 174 Arnowitt-Fickler gauge and Faddeev-Popov determinant, 72 Aspon model, 193 Asymptotic freedom and infrared fixed point, 200 Asymptotic freedom and strong interactions, 200 Asymptotic freedom and ultraviolet fixed point, 200 Auxiliary operators finiteness, 143

Axial gauge and Faddeev–Popov determinant, 71 Axigluon, 302 Axion, invisible, 274 Axion, mass of, 274

b

Background field method, 238 and explicit gauge invariance, 238 and grand unification, 238 and gravity, 238 and supergravity, 238 Background gauge, 240 Bardeen procedure for dimensional regularization, 154 Baryon conservation, 167 Baryons and topological entities, 279 and weakly coupled meson theory, 280 Baryons, decuplet, 171 Baryons, octet, 171 Becchi-Rouet-Stora-Tyutin identities, 137 Becchi-Rouet-Stora-Tyutin transformation, 137 renormalized, 140 Behaviour of f(r) and 1/N expansion (diagram), 281 Beta decay, 173 Beta function from background field method, 245 pure Yang-Mills theory and asymptotic freedom, 215 Bethe-Salpeter equation, 44 (diagram), 45 Big bang cosmology and neutrino mass, 166 Bilepton, 305 Bogoliubov-Parasiuk-Hepp-Zimmerman renormalization, 142

Gauge Field Theories. Paul H. Frampton Copyright © 2008 WILEY-VCH Verlag GmbH & Co. KGaA, Weinheim ISBN: 978-3-527-40835-1

Boost parameter and Lorentz transformation, 175 Boost transformation, 5 Borel analysis in quantum field theory, 258 Born approximation and 1/N expansion, 278 calculation, 46 Born diagrams, 161 electron exchange and with neutral current boson, 160 Born term and renormalization, 120 Bose symmetrization, 80 Bose symmetry, 121 Bose symmetry and triangle anomaly, 128 Bosons charged vector, 92 Nambu-Goldstone pseudoscalar, 267 intermediate vector, masses of, 92 intermediate vector, propagator for, 178 intermediate vector, compared to photon, 178 massless gauge vector and Nambu-Goldstone conjecture, 17 Nambu-Goldstone, 267 neutral intermediate vector, 91 pseudo-Nambu-Goldstone massless, in tree approximation, 26 superheavy gauge, 219 Bottom guark, 187 Bottomonium, 187 Boundary conditions for propagation forward in time, 53 Bubble formation analogy to lifetime of metastable vacuum, 96

С

Cabibbo charged current non-invariant under parity, 176 Callan–Gross relation for spin-1/2 quarks, 224 Callan–Symanzik beta function, 201 Charge renormalization order alpha contributions, 118 Charm, 181 experimental verification, 187 and renormalizable weak interactions, 181 Charmed quark mass value, 186 Charmonium system, 187 Chiral color, 302 Chiral fermions, 125, 322 Chiral matter superfield, 215 Chiral symmetry breaking and lattice gauge, 279 and massless quarks, 259 and temperature, 274 Classical action S and time evolution of quantum mechanical state, 38 Color confinement and low energy coupling, 220 Color force, 281 Color triangle anomaly (diagram), 267 Color-anomalous symmetry, 267 Colored quarks and pion function, 134 Commutation relations and determinant for non-Abelian Feynman rules, 72 Complex adjoint representation of scalar fields, 72 Compton scattering, virtual, 230 Conformality, 315 Conformal fixed points, 307 Conformality constraints, 307 Conservation of charge in quantum electrodynamics, 173 Conservation of flavor in quantum electrodynamics, 173 Conservation of parity in quantum electrodynamics, 173 Cooper pairs Bardeen-Cooper-Schrieffer theory, 30 Cosmological constant, 310 Coulomb gauge and Faddeev-Popov determinant, 70 Coulomb potential used to calculate Rutherford cross-section, 46 Coupling constant, running and renormalization schemes, 250 Covariant gauge, 71 CP invariance and electroweak forces, 191 and instantons, 272 CP violation, quark flavor mixing, 191 Cross-section and partial-wave unitarity, 177 Current, gauge dependent, 268

d

Dalitz plot (diagram), 263 Dalitz plot, triangular and three-jet event, 263 Deep-inelastic electroproduction and scaling violations, 221

Deep-inelastic scattering electron-nucleon and scaling behavior, 182 lepton-hadron, and scaling violation, 221 Definition for generating functional, Faddeev and Popov ansatz, 59 Degrees of divergence and symmetric Yang-Mills theory, 76 Degrees of freedom and relativistic field theory, 48 Dimensional regularization, 99 examples, 106 and mu scale, 252 for quantum electrodynamics vertex correction example, 115 and renormalization group, 201 ultraviolet divergence, 99 for vacuum polarization example, 107 Dimensional renormalization for electron self-mass example, 112 Dimensional transmutation, 84 Dirac 4-component fermions, 213 Dirac equation, 114 in vertex correction example, 115 Dirac field and 1/N expansion, 275 4-component, 174 Dirac matrices, 174 Dirac spinor, 176 Dirac trace, 107, 110, 273 Direct CP violation, 194 Divergences on addition of fermions in regularization scheme, 147 Double W^{\pm} -exchange diagrams, 186 Double-line formalism (diagram), 276 Doublets left-handed quarks and leptons, 182 Dual resonance model, 278 Dyson's argument, 257

e

Effective action computation and background field method, 238 Electromagnetic interactions described by quantum electrodynamics, 172 Electron self-mass, 112 Electron-positron annihilation (diagram), 252 and scaling violation, 221 Electroweak mixing angle and grand unification, 219 Electroweak theory and renormalizability, 179

Elementarily of Higgs boson, 194 Energy density surface for four-dimensional hypersphere, 96 volume for four-dimensional hypersphere, 96 Euler B function, 103 Euler-Lagrange equations of motion, 60 Euler-Maschoroni constant and renormalization schemes, 251 Evolution operator quantum mechanical, 40 Exact symmetry, 18 Exotic quarks, 307 Expansion, 1/N, 274 Experimental values for R (graph), 256 External derivative and finite vertices scalar-vector coupling, 147

f

Faddeev and Popov, 69 determinant. 70 ghost and lattice, 287 ghost and non-Abelian Feynman rules, 72 Fermi interaction invariance under CP, 176 and weak interaction, 173 Fermi's constant, 91 Fermion doubling problem in lattice gauge theory, 283 Fermion loop (diagram), 212 triangle, 127 Fermion mass, from spontaneous symmetry breaking, 182 Fermion number conservation and mass, 174 Fermions Becchi-Rouet-Stora transformation, and renormalization, 150 free and matter field, 17 and regularization, 147 Ferromagnet, infinite example of symmetry breaking, 19 Feynman diagrams used to compute anomalous dimension of operator, 232 Feynman diagrams to compute one-loop beta-function in background gauge, 244 Feynman gauge, 74

and 't Hooft gauge, 158 and scaling violations, 219 Feynman graphs vacuum persistence, 276 Feynman parameter formula, 100, 110, 114, 116 general case, 101 and scalar example of regularization, 122 Feynman propagator, 55 Feynman rules, 121 a nonrelativistic, single particle case, 38 from canonical formalism, 56 conflict with perturbative unitarity, 37 for non-Abelian theories, 72 noncovariant non-Abelian gauge field theories, 59 for nonrelativistic particles, 45 and one-loop corrections, 80, 85 from path integrals, 55 Feynman rules (diagram) in background field gauge, 242 for insertion of Feynman operator, 232 for Yang-Mills theory, Landau gauge, 75 for Yang-Mills theory, 75 Field renormalization constant for triple gluon coupling diagram, 212 Flavor charm and neutral current, 183 of leptons, 165 of quarks, 166 Flavor group, 17 Fock spaces, 20 Force and distance for color, 288 Four-fermion interaction, 173, 178 Four-momentum density, 3 Free-energy and loop corrections, 78 Free wave function time development of, 43

g

Gauge couplings and Yukawa couplings, Jones computation, 215
Gauge dependence of Feynman rules for non-Abelian theories, 71
Gauge dependent current, 268
Gauge field renormalization constant (diagrams), 212
Gauge fields, neutral and tree approximation, 92
Gauge freedom, 32 Gauge function related to ghost field, 138 Gauge group for Glashow-Salam-Weinberg model, 88 global, infinitesimal generators of, 6 low-energy phenomenological, 216 as a product of subgroups, 11 SU(2) and Higgs model, 32 Gauge groups, discrete, 287 Gauge hierarchy, 307 Gauge invariance of action regularized by lattice, 281 and dimensional regularization, 99 and gauge field renormalization constant, 207 local, 7 Gauge theory Abelian, and addition of mass term, 154 non-Abelian, and gauge-invariant current, 155 SU(2) × U(1), 179 unique renormalizable models, 162 Gauge transformation, global, infinitesimal form, 5 Gauge transformations as transport operators, 285 Gauge, background, 240 Gauge-fixing for 't Hooft gauge, 159 condition, 68 term, Lagrangian, 138 terms, and non-Abelian Feynman rules, 72 Gell-Mann and Ne'eman and quark flavor symmetry, 166 Gell-Mann and Zweig quarks as physical entities, 167 Gell-Mann matrices, 167 Generating functional covariant form for Feynman rules, 64 noncovariant form for Feynman rules, 63 Generating functions and local gauge invariance, 67 Georgi, Quinn and Weinberg unified strong and electroweak couplings, 200 Ghost equation of motion, 148 Ghost fields and anticommuting scalar, 137 Ghost loops, 72 Ghost propagator, 75 Ghost-vector vertex, 75

Ghost-antighost Green's function, 142 Ghost-gluon coupling renormalization (diagram), 206 Ghost-gluon vertex and QCD asymptotic freedom, 206 Ghosts and general relativity, 75 Gilbert proof for Nambu-Goldstone phenomena, 26 GIM mechanism, 304 Glashow and standard electroweak theory, 179 Glashow, Iliopoulos and Maiani contribution to Weinberg-Salam theory, 179 Glashow, Iliopoulos and Maiani mechanism generalized to any number of flavors, 184 Glashow-Salam-Weinberg model and 't Hooft gauge, 159 and chiral fermions, 125 example of loop corrections, 88 Gluon 3 gluon and 4 gluon vertices and finiteness, 146, 147 and asymptotic freedom calculation, 204 existence of, and three jet events, 259 polarization vector, 261 and proton momentum in nucleus, 222 Gluon fields and 1/N expansion, 276 Gluon propagator finiteness of, 146 and renormalizability, 146 Grand unification, 216 Graphs one-particle irreducible, 27 Green's functions Abelian Coulomb, 66 connected, 52 connected, and 1/N expansion, 277 and Feynman rules from path integral, 55 finiteness, 144 four finite (diagram), 151 global invariance and Becchi-Rouet-Stora, 138 and Jona-Lasinio proof, 27 K, for the Schrödinger operator, 40 large external momenta and renormalization group equations, 200 in Minkowski space, 51

proper and renormalization group, 201

Ward identities and renormalization, 125 Gross–Llewellyn Smith sum rule, 225 Ground state loop corrections, 77 for O(*N*) model, 87 stability and quantum field theory, 79 Gyromagnetic ratio, 120

h

Hadron-hadron scattering and scaling violation, 221 Hadronic contribution to anomalous moment, 120 Han-Nambu integer charges, 225 Handbag diagram, 223 Heavy guarks, 187 Heisenberg equations of motion, 57 Helmholtz free energy analog in quantum field theory, 78 Hidden symmetry, 18 Hierarchy, 194 Higgs boson, 190 Higgs boson mass, 190 Higgs mass and instanton bubble, 96 in tree approximation, 90 Higgs mechanism, 30 and scalar electrodynamics, 80 Higgs model invariance, 31 Higgs scalar doublet $SU(2) \times U(1)$ gauge theory, 180 Higgs scalar mass and Weinberg computation, 94 Higgs scalars and Glashow-Salam-Weinberg model, 90 Hyperon decay, 174 Hypersphere, 269 Hypersphere, four-dimensional and vacuum stability, 96 Hyperspherically symmetric ansatz, 269

i

Impulse approximation and naive quark–parton model, 223 Independent renormalization constants, 118 Index surface of leading vacuum persistence graphs, 276 Infrared divergence, 77 and three-jet singular behavior, 259 Infrared fixed point and scaling violations, 220

Index 335

Instanton bubble and metastable vacua, 96 Instanton configurations number of parameters, 271 and topological charge, 269 Instantons, 265 and CP invariance, 271 and mass of Nambu–Goldstone bosons, 268 nonperturbative effects, 167 Isosinglets right-handed quarks and leptons, 179

j

Jet data compared to theoretical QCD prediction (diagram), 265 Jets in electron–positron annihilation, 259 Jettiness of events measurement discussed, 265 Jona–Lasinio proof for Nambu–Goldstone phenomenon, 27 Jovian magnetosphere, 173

k

K calculated in perturbation theory, 41 Kaon decay constant and charmed quark mass, 186 Kibble counting, 34 Kinetic term for fermions SU(2) × U(1) gauge theory, 180 Klein–Gordon operators, 55

I

Lagrangian effective, 137 effective chiral meson, 279 for linear sigma model, 28 for QCD with n_f flavors, 266 renormalized, 99 for simple field theory, 20 Lagrangian density and gauge transformation, 6 invariance and local gauge transformations, 8 and Noether's theorem, 1 Lamb shift and quantum electrodynamics renormalization, 112 Lamb shifts, 112 Lambda scale and glueball mass, 281 Lambda scale and hadron mass, 281 Lambda scale and string tension for quarks, 281

Lambda scale, lattice and deep-inelastic scattering, 281 Landau gauge, 71 and 't Hooft gauge, 158 and Faddeev-Popov determinant, 71 propagator, 74 Landau-Ginzburg effective theory of conductivity, 279 Lattice gauge theories, 281 and fermion doubling problem, 284 and infrared cut-off, 282 strong-coupling expansion, 287 and ultraviolet cut-off, 282 Lattice, hypercubic space-time, 283 Left-Right Model, 299 Legendre transform of connected Green's functions, 27 Lepton and quark masses, 165 Lepton-hadron scattering, 222 Lepton-quark analogy, 181 Leptons charged current coupling and tree approximation, 90 flavors and masses of, 165 and quarks, anomaly cancellation, 137 Light-like gauge and Faddeev-Popov determinant, 72 Linear sigma model and pion as Nambu-Goldstone boson, 28 Links for strong-coupling and scaling regions, 290 Local gauge invariance and photon mass, 8 violation of, 17 Logarithmic Q^2 dependence of structure function moments (graph), 236 Loop corrections effects of, 77 gamma-phi plot (diagram), 77 J-Phi plot, 78 Loop diagram for $K_1 K_2$ mass difference, 186 Loop expansion and gauge invariance, 100 Lorentz gauge, see Landau gauge, 71 Lorentz generator densities, 5 Lorentz group, 176 Lorentz invariance and dimensional regularization, 100 and finite vertices, scalar-vector coupling, 151

Gilbert proof of Nambu–Goldstone phenomenon, 26 and Lagrangian density, 2 and QCD asymptotic freedom, 206 and triangle anomaly, 132 under parity, 176 Lorentz transformation infinitesimal, 4

m

Majorana mass term, 175 Mass gap of pure quantum chromodynamics, 289 Mass singularities and three-jet behavior, 259 Massive vectors non-Abelian, 158 non-Abelian and Higgs scalars, 160 Matter fields in representation of gauge group, examples, 16 Meson decay, heavy bottomonium, 278 Meson decay, heavy charmonium, 278 Meson masses and quark mass ratios, 170 Meson masses and virtual photons, 169 Mesons exotic, 274 and explicit charm, 187 pseudoscalar Nambu-Goldstone bosons. 168 tau, 187 tensor, 171 vector, 171 Metropolis procedure and lattice iterative link upgrade, 291 Minkowski space, 51 Momentum in nucleus carried by quarks and antiquarks, 222 Momentum subtraction scheme example for renormalization, 256 Monte Carlo simulation and strong-coupling expansion, 290 Mu decay, 173 Multiplicative renormalization constant, 119 Muon, 120

n

Nambu–Goldstone bosons massless pseudoscalar, 168 number of, 25 pseudo, 26 and spontaneous breaking of continuous symmetry, 25

would-be and Higgs model, 32 would-be, number of, 34 Nambu-Goldstone conjecture, 17 and gauge theories, 28 general proofs, 26 Nambu-Goldstone modes occurrence in nonrelativistic cases, 30 Nambu-Goldstone phase, 279 Nambu-Goldstone symmetry, 267 Neutral currents, 173 Neutrino annihilation in Dirac field, 174 mass, bounds on, 166 two-component theory, 174 Neutrinoless double beta decay, 301 Neutron electric dipole moment, 194 Noether current, Becchi-Rouet-Stora construction, 141 Noether's theorem and conserved currents, local gauge invariance, 12 statement of, 2 and symmetry breaking, 19 Nonperturbative effects, dominance in QCD, 67 Nonperturbative effects of zero modes, 67

0

Okubo-Zweig-Iizuki rule, 187 and strong interactions, 275 One-loop corrections scalar electrodynamics example, 80 scalar model O(N), 84 One-loop graphs for Glashow-Salam-Weinberg model (diagram), 93 for O(N) model (diagram) 86 for scalar electrodynamics (diagram), 81 Operator product expansion, Wilson and renormalization group equations, 200 Operators auxiliary, and renormalization, 143 divergent, 150 Order alpha contributions charge renormalization (diagram), 115

р

P-V isotherm, 79Parameters of the standard model, 298Parity conservation and triangle anomaly, 132

Index 337

Parton distribution function and scaling violations, 226 Parton model and two-jet structures, 265 Parton splitting functions, 238 Path integrals, 37 quantization of gauge field theories, 37 Pati-Salam group, 301 Pauli matrices, 175 Pauli-Villars method, 100 and electron self-mass example, 112 fictitious heavy electrons, 108 and renormalization group, 201 and vacuum polarization angle, 107 Peccei-Quinn model, 273 Perkins plot, anomalous dimensions, 237 Perturbation expansion of quantum chromodynamics and renormalization schemes, 251 Perturbation theory rules and non-Abelian Feynman rules, 72 Perturbative renormalizability and spontaneous breaking, 76 Phase transition between strong and weak coupling, 292 Photon limit of mass of, 173 massless vector particle and local gauge invariance, 17 Photon propagator, 107 Pion as approximate Nambu–Goldstone boson, 30 pseudoscalar, 267 Pion decay, constant for, 168 Pion decay rate theoretical and experimental, 134 and triangle anomaly, 134 Plaquette of hypercubic lattice, 288 Poincare group generators and Noether's theorem, 5 Pomeron exchange, 225 Pontryagin index, nu, 269 Potential function (diagram), 20, 21 Precision data at the Z pole, 189 Primitively divergent diagrams for Yang-Mills theory, 144 Proof of renormalizability for electroweak dynamics, 141 Propagator and Feynman rules for Yang-Mills theory, 74

for general alpha, 74 ghost, 75 and matter fields, 106 Pseudoreality, 323 Pseudotensors and triangle anomaly, 133 Puzzles of the standard model, 297

q

Quantum chromodynamic asymptotic freedom, 204 Quantum chromodynamics corrections to parton model (diagram), 227 and grand unified theories, 200 historic context, 250 and matter field in gauge group, non-Abelian example, 8 renormalizability, 150 Quantum electrodynamics and Abelian U(1) gauge theory, 172 and global gauge invariance, 7 invariance of, 7 and local gauge invariance, 7 and matter field in gauge group, Abelian example, 16 Quantum electrodynamics renormalization discussion, 111 Quantum field theory analogy with statistical thermodynamics, 79 Quantum flavor dynamics anomaly free condition for, 137 Quantum mechanical tunneling and instantons, 268 Ouark charge of, 166 charmed, 167 colored, and pion function, 137 colors of, 167 discovery of b quark, 187 existence of, 167 existence of t quark, 187 flavor of, 166 and lepton anomaly cancellation, 137 mass from nonperturbative effects, 172 mass ratios and meson masses, 169, 170 mass ratios, values for, 170 massless and chiral symmetry, 266 and matter field, 17 and renormalized current masses, 172 scalar and Callan-Gross relation, 224 Quark confinement, 167 Quark constituent masses, 167

Quark current masses, 167 Quark distribution functions, 224 Quark flavor mixing, 191 Cabibbo angle and two family model, 173 Quark sea and Pomeron exchange, 225 Quark–antiquark–gluon model and jet data, 266 Quark–gluon vertex corrections (diagram), 201 Quark-line rule, 187 Quarkonium systems decay of heavy, 221 Quiver diagram, 309 Quiver gauge theories, 315

r

Radiative corrections electron-positron annihilation, 254 Regge pole interpretation of x dependences (diagram), 226 Regularization formula, 107 Renormalizability and local gauge invariance, 8 and symmetric Yang-Mills theory, 76 Renormalizable theory for strong interactions, 162 for unified weak and electromagnetic interactions, 162 Renormalization of sigma model, 142 of single Z^0 exchange (diagram), 185 Renormalization and background field method, 240 Renormalization constant for ghost field (diagram), 205 independent in quantum electrodynamics, 118 multiplicative and electron self-mass, 112 universal, 170 and Ward-Takahashi identity, 117 Renormalization constants definitions, 150 Renormalization group equations, 199, 202 ultraviolet fixed point, 211 Renormalization scheme, 250 Bogoliubov-Parasiuk-Hepp-Zimmerman, 142 for electron-positron annihilation, example, 252

optimal, 257 Renormalized charge, 111 Rotation parameter and Lorentz transformation, 175 Rutherford cross-section, 46 Rutherford cross-sectional formula, 38 Rutherford formula, 48

S

Sakata model, 182 Scalar fields and renormalizability, 152 Scalar loop diagrams, 214 Scalar mass and scalar electrodynamics examples, 83 Scalar model O(N) and effects of loop corrections, 84 Scalar-vector coupling and divergence, 154 Scale dependence of value of renormalization scheme, 256 lambda. 281 lambda, and quantum electrodynamics, 219 lambda, and renormalization, 252 mu, 252 Scaling approximate, in deep-inelastic scattering, 200 behavior and existence of quarks, 182 Bjorken, 222 precocious, 226 in semi-hadronic processes, 292 and transformation of Green's functions, 201 violation, quantum chromodynamic confirmation of, 235 violations, 219 violations, calculation of, 226 Schroedinger equation, one-dimensional, 38 Second-order Feynman diagrams, 56 Singularity and jets in electron-positron annihilation, 265 Singularity of operator Q^{ab} , 61 resolved, 65 Soft breaking of conformal symmetry, 310 Solitons and weakly-coupled meson theory, 278 Some possible behaviors of Beta(g) (diagram), 220 Space-time lattice, hypercubic, 282

Sphericity and jettiness, 265

Spin 1/2 fermions, 147 Spinors, 120 Spontaneous breaking of chiral symmetry and quark mass, 167 and Feynman rules, 76 Nambu-Goldstone boson associated with, 22 of O(N) model, 85 Squared matrix element for lepton-nucleon scattering diagram, 222 Statistical thermodynamics analogy with quantum field theory, 79 Strangeness, 171 Strangeness-changing decay rates, 174 String model approach to QCD in limit, 278 String tension and strong coupling, 288 Strong and weak coupling phase transitions (diagrams), 293 Strong-coupling expansion, 287 Strong CP problem, 193 Superconductivity Landau-Ginzburg effective theory, 279 Superfield and Yang-Mills supersymmetric theory, 215 Superpotential, vanishing Yukawa coupling, 215 Supersymmetric theory Yang-Mills, 215 Supersymmetry, 299, 308 Suppressed couplings (diagram), 275 Sutherland paradox, 126 Sutherland-Veltman theorem, 131 Symmetries and conservation laws, 1 Symmetry breaking explicit, 18 explicit, and linear sigma model, 28 infinite ferromagnet example, 19 spontaneous, 18 spontaneous, and linear sigma model, 30 spontaneous, and Glashow-Salam-Weinberg model, 88 Symmetry, O(n)and Nambu-Goldstone conjecture, 23 and number of Nambu-Goldstone bosons, 23

t

't Hooft and Yang–Mills theory, 141 't Hooft gauge and Abelian Higgs model, 156

't Hooft gauge and non-Abelian Higgs model, 160 't Hooft gauges, 154 't Hooft limit, 274 Tachyon and convexity, quantum field theory, 78 Taylor-Slavnov identity, 140, 204 Theta-vacua and vacuum eigenstates, 271 Three-jet diagrams, 259 event and triangular Dalitz plot, 263 events and gluon, 259 singular behavior, 259 Three neutrinos, 188 Thrust and jets in electron-positron annihilation, 265 Tiling of Wilson loop, 288 (diagram), 288 Top quark, 187 Top quark mass, 187 Topological charge and instanton configurations, 269 Topological entities and baryons, 278 Transformation of Green's functions and scaling, 203 Transport operator and lattice gauge, 285 Tree approximation of Glashow-Weinberg-Salam model, 89 Tree unitarity and preservation by Higgs models, 160 uniqueness of gauges and non-Abelian Higgs models, 160 Triangle anomaly, 125 (graphs), 127 different momentum labelings (diagram), 127 and divergent integral, 128 and Feynman graph, 127 and lattice gauge, 297 and Sutherland paradox, 126 Twist definition, 228 Two-loop corrections (diagram) and renormalization schemes, 255

и

Uehlingterm, 112 Ultra-violet divergences and renormalization, 76 Ultraviolet convergent behavior, 100 Ultraviolet fixed point and renormalization group, 211

and scaling violations, 219 Unification mass, 217 Unified strong and weak couplings and the renormalization group, 200 Uniqueness and non-Abelian Higgs models, 160 Unitarity and Glashow–Salam–Weinberg model, 160 Unitary gauge, 33 Unitary gauge and 't Hooft gauge, 155 Unitary gauge transformation operator, 68 Unitary multiplets, 168 Unitarity triangle, 192 Utiyama procedure, 11

V

Vacuum persistence amplitude and statistical thermodynamic partition function, 282 Vacuum persistence Feynman graphs, 276 Vacuum polarization (diagram), 254 in quantum electrodynamics, 107 Vacua, lifetime of metastable in quantum field theory, 96 Vector mass and Higgs mechanism, 84 Vector propagator and 't Hooft model, 159 Vertex correction, quantum electrodynamics regularization example, 115 Vertices in Feynman rules and 't Hooft gauge, 158 Virtual photons and meson masses, 177

w

Ward identity anomaly, 131 axial-vector, 128 and dimensional regularization, 100 and quantum electrodynamics vertex correction, 117 violation of, in triangle diagrams, 128

Ward-Takahashi identity, 117 and renormalization group, 213 Weak couplings and tree approximation, 92 Weak interactions and conservation violations, 173 Weak interactions of quarks and leptons, 172 Weinberg-Salam conjecture, 179 Weinberg-Salam model for weak interactions, 11 Weyl fermions, 214 Weyl spinors two component, 175 Weyl-Wigner mode, and temperature, 279 Wick's algebraic theorem, 58 Wick's theorem, 55 Wilson coefficients and Wilson operators, 226 Wilson loop (diagram), 287 and lattice gauge, 285 Winding number, 270 World-sheet and strong coupling expansion, 288

X-t plot

typical path (diagram), 39

γ

x

Yang–Mills Lagrangian, 11 Yang–Mills non-Abelian gauge theory Yang–Mills theory in Coulomb gauge, 59 field theory, 8, 37 and matter fields, 16 Yukawa piece in classical Lagrangian, 181 Yukawa terms and color anomalous global axial symmetry, 273

z

Zero mode term and nonperturbative 1/g contribution Green's function, 67
