Preface IX

List of Contributors XI

1	Human Mobility and Spatial Disease Dynamics	1
	<i>Dirk Brockmann</i>	
1.1	Introduction and Motivation	1
1.2	Quantitative Assessments of Human Mobility	3
1.2.1	Preliminary Considerations	3
1.2.2	The Lack of Scale in Human Mobility	5
1.3	Statistical Properties and Scaling Laws in Multi-Scale Mobility Networks	8
1.3.1	Scaling Laws in the Topological Features of Multi-Scale Transportation Networks	10
1.4	Spatially Extended Epidemic Models	12
1.4.1	Disease Dynamics in a Single Population	13
1.4.1.1	The SIS Model	14
1.5	Spatial Models	15
1.5.1	Continuity Limit and Fractional Transport	18
1.5.2	Limiting Cases	20
	References	23
2	Stochastic Evolutionary Game Dynamics	25
	<i>Arne Traulsen and Christoph Hauert</i>	
2.1	Game Theory and Evolution	25
2.2	The Replicator Dynamics	26
2.3	Evolutionary Games in Finite Populations	29
2.3.1	Stochastic Evolutionary Game Dynamics	29
2.3.2	Fixation Probabilities	31
2.3.3	Fixation Times	34
2.3.3.1	Unconditional Fixation Time	34

2.3.3.2	Conditional Fixation Times	36
2.3.4	The Moran Process and Weak Selection	37
2.3.5	The Fermi Process	41
2.4	From Finite to Infinite Populations (and Back Again)	43
2.5	Applications	46
2.5.1	The Prisoner's Dilemma	47
2.5.2	Rock-Paper-Scissors	49
2.5.3	Voluntary Public Goods Games	51
2.5.4	Punishment	54
2.6	Concluding Remarks	56
	References	57
3	Dynamic and Topological Interplay in Adaptive Networks	63
	<i>Bernd Blasius and Thilo Gross</i>	
3.1	Introduction	63
3.2	Adaptive Networks: A Definition	66
3.2.1	Basic Definitions of Graph Theory	66
3.2.2	Dynamic and Evolving Networks	68
3.2.3	Adaptive Networks	70
3.3	Ubiquity of Adaptive Networks Across Disciplines	72
3.4	Robust Self-Organization Toward Criticality in Boolean Networks	76
3.5	Adaptive Connection Weights in Coupled Oscillator Networks	79
3.5.1	Leadership and the Division of Labor	79
3.5.2	Self-Organization Towards Synchronizability	82
3.6	Cooperation in Games on Adaptive Networks	84
3.6.1	Elevated Levels of Cooperation	84
3.6.2	Struggle for Topological Position	87
3.7	Dynamics and Phase Transitions in Opinion Formation and Epidemics	88
3.7.1	Epidemiological Models	88
3.7.2	Opinion Formation	97
3.8	Summary, Synthesis and Outlook	98
3.8.1	The Four Hallmarks of Adaptive Networks	99
3.8.2	Adaptive Networks: Future Impacts	100
3.8.3	Towards a Unifying Theory of Adaptive Networks	101
3.8.4	Future Challenges	103
	References	103

4	Fractal Models of Earthquake Dynamics	107
	<i>Pathikrit Bhattacharya, Bikas K. Chakrabarti, Kamal, and Debashis Samanta</i>	
4.1	Introduction	107
4.1.1	Earthquake Statistics	107
4.1.2	Modeling Earthquake Dynamics	108
4.1.3	Fractal Faults	110
4.1.3.1	Fractal Geometry of Fault Surfaces	110
4.1.3.2	Frequency–Size Distribution of Faults	111
4.2	Two-Fractal Overlap Model	115
4.2.1	The Model	115
4.2.2	Analysis of the Time Series	117
4.2.3	The Gutenberg–Richter Law	119
4.2.4	The Omori Law	121
4.2.5	Temporal Distribution of Magnitudes of an Aftershock Sequence	123
4.3	Comparison with Observations	125
4.3.1	The Gutenberg–Richter Law	125
4.3.2	The Omori Law	127
4.3.3	The Temporal Distribution of Aftershock Magnitudes	127
4.4	Fiber Bundle Model of Earthquakes	137
4.5	Summary and Discussion	139
C.1	Random Cantor Sets	148
C.2	Regular Sierpinski Gaskets	149
C.3	Random Sierpinski Gaskets	152
C.4	Percolating Clusters in a Square Lattice	152
	References	155
5	Epilepsy	159
	<i>Klaus Lehnertz, Stephan Bialonski, Marie-Therese Horstmann, Dieter Krug, Alexander Rothkegel, Matthäus Staniek, and Tobias Wagner</i>	
5.1	Introduction	159
5.2	Computational Models in Epilepsy Research	165
5.2.1	From Microscopic to Macroscopic Modeling Approaches	166
5.2.2	Modeling Epileptic Phenomena	168
5.3	Measuring Interactions in Epileptic Networks	171
5.3.1	Bivariate Time Series Analysis	173
5.3.2	Multivariate Time-Series Analysis	179
5.4	Conclusion	183
	References	184

6	Structure in Networks	201
	<i>Jörg Reichardt and Stefan Bornholdt</i>	
6.1	Introduction	201
6.2	Multivariate Data Versus Relational Data	203
6.2.1	Clustering	203
6.2.2	Dimensionality Reduction	208
6.3	A New Quality Function for Structure Recognition in Networks	210
6.3.1	The Optimal Image Graph	213
6.3.2	Choice of a Penalty Function and Null Model	214
6.3.3	Benchmark	216
6.4	Clusters, Modularity and Graph Partitioning	217
6.5	Modularity of Random Networks: Replica Method	218
6.6	Modularity of Random Networks: Cavity Method	222
6.7	Conclusion	234
	References	236
	Index	239
