Foreword *VII*

Preface *XXVII*

Part One Basic Physics of Chaos and Synchronization in Lasers

1 Introduction 3

- 1.1 Lasers and Chaos 6
 - 1.1.1 Lasers 6
 - 1.1.2 Chaos 6
 - 1.1.3 Connection Between Lasers and Chaos 7
 - 1.1.4 Chaos and Noise 8
- 1.2 Synchronization of Chaos and Optical Communication 8
 - 1.2.1 Synchronization of Chaos 8
 - 1.2.2 Optical Communication with Synchronized Chaotic Lasers 9
- 1.3 Random Number Generation with Chaotic Lasers and Other Applications 11
 - 1.3.1 Random Number Generation 11
 - 1.3.2 Controlling Chaos and Other Applications 12
- 1.4 Research Directions for Engineering Applications with Chaotic Lasers 12
- 1.5 Outline of This Book 13
 - 1.5.1 Contents of Chapters: First Parts for the Basics 14
 - 1.5.2 Contents of Chapters: Second Part for the Applications 16

2 Basics of Chaos and Laser 19

- 2.1 History of Instabilities of Laser Output 19
 - 2.1.1 Examples of Laser Instabilities 19
 - 2.1.1.1 First Observation of Laser Instabilities in a Ruby Laser 19
 - 2.1.1.2 Green Problem in a Solid-State Laser for Second-Harmonic Generation 20
 - 2.1.1.3 Feedback-Induced Instability in a Semiconductor Laser for Optical Disks and Optical Communication Systems 21
 - 2.1.2 Inherent Noise-Induced Instabilities 23
 - 2.1.3 Deterministic Chaos in Lasers and Lorenz-Haken Equations 24

2.2	Basic Chaos Theory	26
2.2.1	Logistic Map in Discrete-Time System	26
2.2.1.1	Recurrence Formula	26
2.2.1.2	Chaotic Sequence	27
2.2.1.3	Bifurcation Diagram	28
2.2.1.4	Lyapunov Exponent	30
2.2.2	Lorenz Model in a Continuous-Time System	31
2.2.2.1	Lorenz Equations	31
2.2.2.2	Temporal Waveform and Attractor	32
2.2.2.3	Sensitive Dependence on Initial Conditions	32
2.2.2.4	Bifurcation Diagram	33
2.2.2.5	Lyapunov Exponent	33
2.2.3	Reconstruction of Attractor in Time-Delayed Phase Space	35
2.2.4	Types of Bifurcation and Route to Chaos	36
2.2.4.1	Period-Doubling Route to Chaos	36
2.2.4.2	Quasiperiodicity Route to Chaos	37
2.2.4.3	Intermittency Route to Chaos	37
2.3	Basic Laser Theory	38
2.3.1	Light–Matter Interaction for Laser Radiation	38
2.3.1.1	Elements of a Laser	38
2.3.1.2	Two-Atomic-Level Description and Mechanism of Laser Oscillation	39
2.3.2	Radiative Recombination of Electron–Hole Pairs in Semiconductor Lasers	40
2.3.3	Rate Equations for Laser Dynamics	41
2.3.4	Relaxation Oscillation Frequency	44
2.3.5	Mechanism of Chaotic Instability in Lasers	45
2.4	Connection Between Chaos and Lasers	46
2.4.1	Single-Mode Laser Model Based on Maxwell–Bloch Equations	46
2.4.2	Classification of Laser Models Based on Decay Rates	48
2.4.2.1	Class C Lasers (Three Variables)	48
2.4.2.2	Class B Lasers (Two Variables)	48
2.4.2.3	Class A Lasers (One Variable)	49
	Appendix	
2.A.1	General Formula of the Linearized Equations and the Derivation of the Linearized Equations in the Lorenz Model	51
2.A.2	General Formula for the Calculation of the Lyapunov Exponent in Nonlinear Dynamical Systems Without Time Delay	53
2.A.3	Rössler Model	54
2.A.4	Derivation of the Relaxation Oscillation Frequency	55
3	Generation of Chaos in Lasers	59
3.1	Basics of Generation of Chaos in Lasers	59
3.1.1	Classification of Generation Techniques of Chaos in Lasers	59

3.1.1.1	Optical Feedback	60
3.1.1.2	Optical Coupling and Injection	62
3.1.1.3	External Modulation	62
3.1.1.4	Insertion of Nonlinear Element	62
3.1.1.5	Multimode Lasers and High-Dimensional Laser Systems	63
3.1.1.6	Class C Lasers Satisfying the Condition for Lorenz–Haken Chaos	63
3.1.1.7	Ikeda-Type Passive Optical Systems	63
3.1.2	Characteristics of Chaos in Lasers	64
3.1.2.1	High-Frequency Chaos	64
3.1.2.2	Existence of Two Oscillation Frequencies in Different Orders of Magnitude	64
3.1.2.3	Middle Degrees of Freedom	65
3.1.2.4	Physical Variables	65
3.1.2.5	Transmission of Chaos	65
3.1.2.6	Variety of Laser Models	65
3.1.3	How to Distinguish between Chaos and Noise from Experimental Data?	66
3.1.3.1	Experimental apparatus for Measurement of Instability in Laser Intensity	66
3.1.3.2	Examples of Chaos and Noise from Real Experimental Data	66
3.1.3.3	Observation of Bifurcation	67
3.1.3.4	Comparison with Laser Model	68
3.2	Chaos in Semiconductor Lasers	69
3.2.1	Semiconductor Laser with Optical Feedback	69
3.2.1.1	Dynamical Regime and L–I Characteristics	69
3.2.1.2	Coherence Collapse and Chaos in Experiment	71
3.2.1.3	Numerical Results and Bifurcation Diagram	73
3.2.1.4	Low-Frequency Fluctuations (LFFs)	75
3.2.1.5	Short-Cavity Regime	78
3.2.2	Semiconductor Laser with Polarization-Rotated Optical Feedback	79
3.2.3	Semiconductor Laser with Optoelectronic Feedback	83
3.2.4	Semiconductor Laser with Optical Injection and Coupling	88
3.2.4.1	Temporal Dynamics and Bifurcation Diagram	88
3.2.4.2	Bandwidth Enhancement of Chaos by Optical Injection	91
3.2.5	Semiconductor Laser with Injection Current Modulation	92
3.2.6	Vertical-Cavity Surface-Emitting Laser (VCSEL)	93
3.2.6.1	Basic Characteristics	93
3.2.6.2	Optical Feedback	96
3.2.6.3	Optical Injection	97

3.3	Chaos in Electro-Optic Systems	98
3.3.1	Ikeda-Type Nonlinear Delay Dynamics	98
3.3.2	Wavelength Chaos in Electro-Optic System	101
3.3.3	Intensity Chaos in Electro-Optic System	103
3.3.4	Phase Chaos in Electro-Optic System	105
3.4	Chaos in Fiber Lasers	107
3.4.1	External Modulation	109
3.4.2	Multimode (Dual-Wavelength) Dynamics	112
3.4.3	Fast Polarization Dynamics	114
3.5	Chaos in Solid-State Lasers	115
3.5.1	External Modulation	116
3.5.2	Frequency-Shifted Optical Feedback	117
3.5.3	Antiphase Dynamics in Multimode Laser	120
3.5.4	Insertion of Nonlinear Crystal	122
3.6	Chaos in Gas Lasers	124
3.6.1	Lorenz–Haken Chaos	124
3.6.2	Insertion of Saturable Absorbers	128
3.6.3	External Modulation	130
3.6.4	Optical Injection	130
3.6.5	Multimode Laser	132
3.6.6	Low-Frequency Dynamics with Optical Feedback	134
	Appendix	
3.A.1	Numerical Model for Chaotic Dynamics in a Semiconductor Laser	135
3.A.1.1	Coherent Optical Feedback	135
3.A.1.2	Polarization-Rotated Optical Feedback	135
3.A.1.3	Optoelectronic Feedback (Incoherent Feedback)	136
3.A.2	Mechanism of Low-Frequency Fluctuations (LFFs) in Semiconductor Laser with Optical Feedback	137
3.A.3	Numerical Model for Chaotic Dynamics in a Vertical-Cavity Surface-Emitting Laser (VCSEL)	139
3.A.4	Numerical Model for Chaotic Dynamics in an Electro-Optic System	139
3.A.5	Numerical Model for Chaotic Dynamics in a Fiber Laser	140
3.A.6	Numerical Model for Chaotic Dynamics in a Solid-State Laser	140
3.A.6.1	Single-Mode Laser Model	140
3.A.6.2	Multimode Laser Model with Spatial Hole Burning (Tang–Statz–deMars Equations)	141
3.A.7	Numerical Model for Chaotic Dynamics in a Gas Laser	142
4	Analysis of Chaotic Laser Dynamics: Example of Semiconductor Laser with Optical Feedback	145
4.1	Experimental Analysis of Semiconductor Lasers with Optical Feedback	145

4.1.1	Experimental Setup	146
4.1.2	Light Power Versus Injection Current (L-I) Characteristics	147
4.1.3	Temporal Waveforms, RF Spectra, Autocorrelations, and Optical Spectra	149
4.1.4	Two-Dimensional Map	155
4.2	Model for Semiconductor Laser with Optical Feedback	156
4.2.1	Lang-Kobayashi Equations	156
4.2.2	Derivation of the Electric-Field Amplitude and Phase of the Lang-Kobayashi Equations from the Complex Electric-Field Equations	158
4.2.3	Derivation of the Real and Imaginary Electric Fields of the Lang-Kobayashi Equations from the Complex Electric-Field Equations	160
4.3	Analytical Approach of Semiconductor Laser with Optical Feedback	161
4.3.1	Steady-State Solutions without Optical Feedback	161
4.3.2	Linear Stability Analysis for Steady-State Solutions without Optical Feedback	162
4.3.2.1	Eigenvalues of Jacobian Matrix	162
4.3.2.2	Relaxation Oscillation Frequency	165
4.3.3	Steady-State Solutions with Optical Feedback	166
4.3.4	Linear Stability Analysis for Steady State Solutions with Optical Feedback	169
4.4	Numerical Analysis of Semiconductor Laser with Optical Feedback	172
4.4.1	Numerical Results of Chaotic Dynamics	173
4.4.1.1	Temporal Waveforms, FFTs, and Attractors	173
4.4.1.2	Bifurcation Diagram and Two-Dimensional Dynamical Map	176
4.4.2	Linear Stability Analysis for Oscillatory Trajectory	179
4.4.3	Maximum Lyapunov Exponent	181
4.5	Dimensionless Equations and Further Nonlinear Analysis	184
4.5.1	Dimensionless Equations	184
4.5.2	Numerical Results of Chaotic Dynamics	187
4.5.3	Linear Stability Analysis for Oscillatory Trajectory in Dimensionless Equations and Maximum Lyapunov Exponent	188
4.5.4	Lyapunov Spectrum	190
4.5.5	Kolmogorov-Sinai Entropy and Kaplan-Yorke Dimension	192
4.6	Lang-Kobayashi Equations with Gain Saturation	194
4.6.1	Lang-Kobayashi Equations with Gain Saturation	194
4.6.2	Numerical Results and Histogram	195
4.6.3	Linear Stability Analysis for Oscillatory Trajectory and Measurement of Complexity	196

Appendix

- 4.A.1 Derivation of the Rate Equations of Semiconductor Lasers 199
- 4.A.2 Derivation of the Rate Equations of Semiconductor Lasers with Optical Feedback 205
- 4.A.3 Analytical Approach of the Stability of Steady State Solutions for Semiconductor Laser with Optical Feedback Under the Limits of Weak and Short Feedback 206
- 4.A.4 Runge–Kutta Method for the Integration of Ordinary Differential Equations 208
- 4.A.5 Gram–Schmidt Orthogonalization 210

5 Synchronization of Chaos in Lasers 211

- 5.1 Concept of Synchronization of Chaos in Lasers 211
 - 5.1.1 Introduction 211
 - 5.1.2 What is Synchronization? 212
 - 5.1.3 Why Should Chaos be Synchronized? 213
 - 5.1.4 Characteristics of Synchronization of Chaos in Laser Systems 215
 - 5.1.5 Synchronization of Chaos for Communication Applications 216
- 5.2 History of Synchronization of Chaos in Lasers 217
 - 5.2.1 Synchronization of Chaos in Electronic Circuits 217
 - 5.2.1.1 Pecora–Carroll Method 217
 - 5.2.1.2 Pyragas Method 218
 - 5.2.2 Synchronization of Chaos in Lasers 219
- 5.3 Coupling Schemes and Synchronization Types 223
 - 5.3.1 Identical Synchronization 224
 - 5.3.2 Generalized Synchronization (with High Correlation) 225
 - 5.3.3 Synchronization of Chaos in Feedback Systems 225
 - 5.3.3.1 Open-Loop Configuration 225
 - 5.3.3.2 Closed-Loop Configuration 227
 - 5.3.4 Mutual Coupling 228
 - 5.3.5 Linear Stability Analysis and Conditional Lyapunov Exponent 229
- 5.4 Examples of Synchronization of Chaos in Semiconductor Lasers 230
 - 5.4.1 Semiconductor Lasers with Coherent Optical Feedback 231
 - 5.4.2 Semiconductor Lasers with Polarization-Rotated Optical Feedback 236
 - 5.4.3 Semiconductor Lasers with Optoelectronic Feedback 237
 - 5.4.4 Semiconductor Lasers with Optical Injection 239
 - 5.4.5 Semiconductor Lasers with Mutual Coupling 240
 - 5.4.5.1 Symmetry Breaking and Leader–Laggard Relationship 240
 - 5.4.5.2 Zero-Lag Synchronization 242
 - 5.4.6 Vertical-Cavity Surface-Emitting Lasers (VCSEs) 243
- 5.5 Examples of Synchronization of Chaos in Electro-Optic Systems and Other Lasers 245
 - 5.5.1 Electro-Optic Systems 245

5.5.2	Fiber Lasers	248
5.5.3	Solid-State Lasers	250
5.5.4	Gas Lasers	253
5.6	Specific Types of Synchronization	254
5.6.1	Phase Synchronization	254
5.6.2	Generalized Synchronization (with Low Correlation)	258
5.7	Consistency	263
5.7.1	What is Consistency?	263
5.7.2	Examples of Consistency in Laser Systems	265
5.7.3	Application of Consistency	269
5.7.3.1	Noninvasive Testing	269
5.7.3.2	Analysis of Brain Dynamics and Learning Process in the Brain	269
5.7.3.3	Physical One-Way Function	269
5.7.3.4	Teaching-Learning Methodologies	270
5.7.3.5	Design of Drug Delivery	270
Appendix		
5.A.1	Pecora–Carroll Method for Synchronization of Chaos	270
5.A.2	General Formula of Linearized Equations for Coupled Differential Equations	271
5.A.3	Procedure for the Calculation of the Conditional Lyapunov Exponent	273
5.A.4	Numerical Model for Synchronization of Chaos in Unidirectionally Coupled Semiconductor Lasers	274
5.A.4.1	Coherent Optical Feedback	274
5.A.4.2	Polarization-Rotated Optical Feedback	275
5.A.4.3	Optoelectronic Feedback (Incoherent Feedback)	276
5.A.5	Numerical Model for Synchronization of Chaos in Unidirectionally Coupled Electro-Optic Systems	277
5.A.6	Numerical Model for Synchronization of Chaos in Unidirectionally Coupled Fiber Lasers	278
5.A.7	Numerical Model for Synchronization of Chaos in Unidirectionally Coupled Solid-State Lasers	279
5.A.7.1	Single-Mode Laser Model	279
5.A.7.2	Multimode Laser Model with Spatial Hole Burning (Tang–Statz–deMars Equations)	280
5.A.8	Numerical Model for Synchronization of Chaos in Unidirectionally Coupled Gas Lasers	281
5.A.9	Definition of Phase in Chaotic Temporal Waveform by the Hilbert Transform	282
6	Analysis of Synchronization of Chaos: Example of Unidirectionally Coupled Semiconductor Lasers with Optical Feedback	285
6.1	Experimental Analysis on Synchronization of Chaos in Two Semiconductor Lasers with Optical Feedback	285

- 6.1.1 Experimental Setup for Synchronization of Chaos 285
- 6.1.2 Experimental Results of Synchronization of Chaos 287
- 6.1.3 Parameter Dependence of Synchronization of Chaos 290
- 6.2 Model for Synchronization of Chaos in Two Coupled Semiconductor Lasers with Optical Feedback 293
 - 6.2.1 Lang–Kobayashi Equations for Synchronization of Chaos in Unidirectionally Coupled Semiconductor Lasers with Optical Feedback 293
 - 6.2.1.1 Coupled Lang–Kobayashi Equations 293
 - 6.2.1.2 Identical Synchronous Solution 295
 - 6.2.2 Derivation of the Electric-Field Amplitude and Phase of the Coupled Lang–Kobayashi Equations from the Complex Electric-Field Equations 296
 - 6.2.3 Derivation of the Real and Imaginary Electric Fields of the Coupled Lang–Kobayashi Equations from the Complex Electric-Field Equations 299
- 6.3 Numerical Analysis on Synchronization of Chaos in Unidirectionally Coupled Semiconductor Lasers with Optical Feedback 300
 - 6.3.1 Measures for Synchronization of Chaos 300
 - 6.3.1.1 Two Types of Synchronization and Cross-Correlation Values 300
 - 6.3.1.2 Optical Frequency Detuning 302
 - 6.3.2 Numerical Results of Temporal Waveforms and Correlation Plots 303
 - 6.3.3 Parameter Dependence of the Two Types of Synchronization 305
 - 6.3.4 Linear Stability Analysis of Synchronous Oscillatory Solutions for Identical Synchronization 308
 - 6.3.4.1 Linearized Equations 308
 - 6.3.4.2 Conditional Lyapunov Exponent 309
 - 6.3.4.3 Numerical Results of Conditional Lyapunov Exponent 310
 - 6.3.5 Open- Versus Closed-Loop Configurations 312
- 6.4 Experimental Analysis on Generalized Synchronization with Low Correlation in Three Semiconductor Lasers in the Auxiliary System Approach 313
 - 6.4.1 Experimental Setup for Generalized Synchronization with Low Correlation in the Auxiliary System Approach 314
 - 6.4.2 Experimental Results of Generalized Synchronization 316
 - 6.4.3 Parameter Dependence of Generalized Synchronization 320
 - 6.4.4 Dependence of Generalized Synchronization on Optical Phase of Feedback Light 322
- 6.5 Model for Generalized Synchronization with Low Correlation in Three Semiconductor Lasers in the Auxiliary System Approach 324
 - 6.5.1 Coupled Lang–Kobayashi Equations for Generalized Synchronization in the Auxiliary System Approach 325

6.5.2	Synchronous Solutions for Generalized Synchronization in the Auxiliary System Approach	327
6.6	Numerical Analysis on Generalized Synchronization of Chaos in Three Semiconductor Lasers in the Auxiliary System Approach	327
6.6.1	Temporal Waveforms	329
6.6.2	Parameter Dependence of Generalized Synchronization	329
6.6.3	Linear Stability Analysis of Synchronous Oscillatory Solutions for Generalized Synchronization	331
6.6.3.1	Linearized Equations	331
6.6.3.2	Conditional Lyapunov Exponent	333
6.6.3.3	Numerical Results of Conditional Lyapunov Exponent	334
6.6.4	Two-Dimensional Map	334
6.6.5	Dependence of Synchronization Quality on Optical Phase of Feedback Light in the Closed-Loop Configuration	336
	Appendix	
6.A.1	Rate Equations for Identical Synchronization in Unidirectionally Coupled Semiconductor Lasers with Optical Feedback in the Closed-Loop Configuration	337

Part Two Application of Chaotic Lasers to Optical Communication and Information Technology

7	Basic Concept of Optical Communication with Chaotic Lasers	343
7.1	History of Secret Communication	343
7.1.1	Cryptography	343
7.1.2	Steganography	344
7.1.3	Noise Communication	346
7.2	Concept of Chaos Communication	346
7.2.1	Basic Idea of Chaos Communication	346
7.2.2	Features of Chaos Communication	348
7.2.3	Hardware Keys	348
7.2.4	Synchronization for Chaos Communication	349
7.3	Characteristics of Chaos Communication	351
7.3.1	Hardware-Based Communication	351
7.3.2	Chaos-Synchronization-Based Communication	351
7.3.3	Privacy	352
7.3.4	Compatibility	352
7.3.5	Analog Communication	353
7.3.6	Subcarrier Communication	353
7.3.7	Coherent Communication	353
7.3.8	Multiplexing and Noise Tolerance	353
7.4	Encoding and Decoding Techniques	354
7.4.1	Chaos Masking	354
7.4.2	Chaos Modulation	357
7.4.3	Chaos Shift Keying	360

7.5	Tools for Quantitative Evaluation of Performance of Chaos Communication	362
7.5.1	Bit Error Rate, Q Factor, and Signal-to-Noise Ratio	362
7.5.2	Modulation Format and Eye Diagram	365
8	Implementation of Optical Communication with Chaotic Lasers	369
8.1	History of Chaos Communication	369
8.1.1	Chaos Communication in Electronic Circuits	369
8.1.2	Chaos Communication in Optical Systems	370
8.1.3	European Project for Chaos Communication	375
8.2	Examples of Communication Systems with Various Chaotic Lasers	377
8.2.1	Semiconductor Lasers with Optical Feedback	377
8.2.1.1	Field Experiment of Chaos Communication	377
8.2.1.2	Transmission of TV Video Signal	381
8.2.2	Semiconductor Lasers with Optoelectronic Feedback	383
8.2.3	Electro-Optic Systems	384
8.2.4	Fiber Lasers	386
8.3	Performance Evaluation of Optical Communication with Chaotic Lasers	390
8.3.1	Subcarrier Modulation	390
8.3.2	Photonic Integrated Circuit and Forward Error Correction for High-Performance Chaos Communication	394
8.3.2.1	Photonic Integrated Circuit	394
8.3.2.2	Chaos Communication Experiment	396
8.3.2.3	Forward Error Correction Technique	397
8.3.2.4	Bit-Error-Rate (BER) Performance	397
8.3.2.5	Analysis for Unauthorized Users	399
8.3.3	Optical Phase Chaos for 10-Gb/s Chaos Communication	400
8.3.4	Comparison of the Encoding and Decoding Schemes for Chaos Communication	403
8.4	Privacy Issues in Optical Communication with Chaotic Lasers	405
8.4.1	Introduction	405
8.4.2	Reconstruction of Model and Parameter Settings by Time-Series Analysis	406
8.4.3	Parameter Estimation by Using Similar Hardware	406
8.4.4	Parameter Estimation by Time-Series Analysis	408
8.4.5	Direct Detection of Presence of Message from Time-Series Analysis	409
8.4.6	Summary of Privacy Issues	410
8.5	Photonic Integrated Circuit for Optical Communication with Chaotic Lasers	410
8.5.1	Photonic Integrated Circuit for a Semiconductor Laser with all-Optical Feedback	411
8.5.2	Photonic Integrated Circuit for two Mutually Coupled Semiconductor Lasers	413

8.5.3	Photonic Integrated Circuit for Colliding-Pulse Mode-Locked Lasers	415
8.6	Other Encoding and Decoding Techniques	417
8.6.1	Spatiotemporal Encoding	417
8.6.2	Polarization Encoding	419
8.6.3	Multiplexing Communications	421
8.7	New Perspective of Optical Communication with Chaotic Lasers	423
8.7.1	Analogy to Biological Communication Systems	423
8.7.2	Towards the World of Scientific Fiction	424
9	Secure Key Distribution Based on Information-Theoretic Security with Chaotic Lasers	427
9.1	Introduction	427
9.1.1	Secure Key Distribution	427
9.1.2	Computational Security and Information-Theoretic Security	428
9.2	Concept of Information-Theoretic Security	429
9.2.1	History of Information-Theoretic Security and Maurer's Satellite Scenario	429
9.2.2	Bounded Observability	430
9.3	Implementation of Information-Theoretic Security with Chaotic Lasers	431
9.3.1	Bounded Observability with Chaotic Semiconductor Lasers	431
9.3.2	Public-Channel Cryptography with Coupled Chaotic Semiconductor Lasers	435
9.3.3	Bidirectional Message Transmission with Mutually Coupled Semiconductor Lasers	439
9.4	Information-Theoretic Security with Optical Noise	441
9.4.1	Ultralong Fiber-Laser System	441
10	Random Number Generation with Chaotic Lasers	445
10.1	Introduction	445
10.1.1	Needs for Random Number Generation	445
10.1.2	Extraction of Randomness from Chaotic Lasers	447
10.2	Types of Random Number Generators	447
10.2.1	What are Random Numbers?	447
10.2.1.1	Independence	448
10.2.1.2	Unpredictability	449
10.2.2	Two Types of Random Number Generators	449
10.2.2.1	Physical Random Number Generators (RNG)	449
10.2.2.2	Pseudorandom Number Generators (PRNG)	451
10.2.3	Issues of Conventional Random Number Generators	451
10.3	Examples of Random Number Generators with Chaotic Lasers	452
10.3.1	Monobit Generation with Two Lasers	452
10.3.1.1	Scheme	452
10.3.1.2	Parameter Dependence	457

10.3.2	Monobit Generation with One Laser	460
10.3.3	Multibit Generation with One Laser	461
10.3.4	Postprocessing for High-Speed Random Number Generation	463
10.3.5	Bandwidth Enhancement of Chaotic Lasers for High-Speed Random Number Generation	465
10.3.6	Photonic Integrated Circuit for Random Bit Generators	469
10.4	Application of Chaotic-Laser-Based Random Number Generators to High-Speed Quantum Key Distribution	472
10.5	Numerical Evaluation of Random Number Generator as Entropy Source	475
10.5.1	Entropy Generation from Internal Noise by Chaotic Dynamics	475
10.5.2	Estimation of Entropy	477
10.5.3	Entropy Rate and Nondeterministic Bit Generation	478
10.6	Conventional Methods for Physical Random Number Generators	480
10.6.1	Thermal Noise	480
10.6.1.1	Direct Amplification of Thermal Noise	480
10.6.1.2	Metastability	481
10.6.1.3	Two Oscillators with Frequency Jitter	482
10.6.2	Quantum Noise	484
10.6.3	Optical Noise (Spontaneous Emission Noise)	485
10.6.4	Radiation from Radioactive Nuclide	486
10.6.5	Chaotic Dynamics in Electronic Circuits	487
10.6.6	Traditional Physical Devices	487
10.6.7	Other Methods	488
10.6.8	Commercial Physical Random Number Generators	488
10.6.8.1	Intel Chip (Intel)	488
10.6.8.2	Random Master (Toshiba)	489
10.6.8.3	Random Streamer (FDK)	490
10.6.8.4	Quantis (ID Quantique)	490
10.7	Postprocessing Techniques for Improvement of Randomness	490
10.7.1	von Neumann Method	491
10.7.2	Exclusive-OR (XOR) Method	492
10.8	Pseudorandom Number Generators	493
10.8.1	Linear Congruential Method	493
10.8.2	M sequence and Generalized Feedback Shift Register (GFSR)	494
10.8.3	Combined Tausworthe Method	496
10.8.4	Mersenne Twister	496
10.9	Statistical Evaluation of Random Numbers with NIST Special Publication 800-22 Test Suite	497
10.9.1	Strategies for Statistical Analysis of Random Number Generators	497
10.9.2	Evaluation of p-Values	499

10.9.3	Interpretation of Empirical Results	501
10.9.3.1	Proportion of p-Values	501
10.9.3.2	Uniformity of Distribution of p-Values	501
10.9.4	Tendency of Passed/Failed NIST SP 800-22 Tests in Laser-Chaos-Based Random Number Generators	502
10.9.5	Other Statistical Tests of Randomness	503
	Appendix	
10.A.1	Recipe for High-Quality Random Number Generators	503
10.A.2	Dicthl method for Postprocessing of Random Number Generators	504
10.A.3	Algorithm of Mersenne Twister Pseudorandom Number Generator	505
10.A.4	Detailed Description of NIST Special Publication 800-22	506
10.A.4.1	Frequency (Monobit) Test	506
10.A.4.2	Frequency Test within a Block	506
10.A.4.3	Cumulative Sums (Cusums) Test	506
10.A.4.4	Runs Test	507
10.A.4.5	Tests for the Longest-Run-of-Ones in a Block	507
10.A.4.6	Binary Matrix Rank Test	507
10.A.4.7	Discrete Fourier Transform (Spectral) Test	507
10.A.4.8	Non-overlapping Template Matching Test	507
10.A.4.9	Overlapping Template Matching Test	507
10.A.4.10	Maurer's "Universal Statistical" Test	508
10.A.4.11	Approximate Entropy Test	508
10.A.4.12	Random Excursions Test	508
10.A.4.13	Random Excursions Variant Test	508
10.A.4.14	Serial Test	508
10.A.4.15	Linear Complexity Test	508
11	Controlling Chaos in Lasers	511
11.1	Classification of Controlling Chaos	511
11.1.1	Feedback Control Method	511
11.1.1.1	OGY Method	511
11.1.1.2	Occasional Proportional Feedback (OPF) Method	512
11.1.1.3	Continuous Feedback Control Method	513
11.1.2	Nonfeedback Control Method	514
11.2	Examples of Controlling Chaos in Lasers	515
11.2.1	Feedback Control Method for Controlling Chaos in Lasers	515
11.2.1.1	Occasional Proportional Feedback (OPF) Method	515
11.2.1.2	Continuous Feedback Control Method	518
11.2.2	Nonfeedback Control Method for Controlling Chaos in Lasers	521
11.2.2.1	Loss Modulation	521

11.2.2.2	High-Frequency Injection (HFI) Method for Semiconductor Lasers	523
11.2.2.3	Stabilization to High-Periodic Oscillations	525
11.3	Applications of Controlling Chaos in Lasers	525
11.3.1	Suppression of Relative Intensity Noise (RIN)	525
11.3.2	Chaotic Search and Adaptive Mode Selection	527
11.3.3	Dynamical Memory	528
11.3.4	Communication with Chaos by Controlling Chaos	529
	Appendix	
11.A.1	OGY Method for Controlling Chaos	530
12	Other Applications with Chaotic Lasers	533
12.1	Remote Sensing with Chaotic Lasers	533
12.1.1	Chaotic Lidar	533
12.1.2	Chaotic Radar	536
12.1.3	Chaotic Correlation Optical Time-Domain Reflectometer	539
12.2	Blind Source Separation of Chaotic Signals by Using Independent Component Analysis	542
12.2.1	Motivation for Blind Source Separation	542
12.2.2	Principle of Independent Component Analysis	543
12.2.3	Examples of Blind-Source Separation with Chaotic Lasers	544
12.3	Fractal Optics	547
12.3.1	Chaos Mirror for Wireless Optical Communications	548
12.3.2	Fractal Patterns in Regular Polyhedral Mirror-Ball Structures	550
