

## Contents

### Preface IX

<b>1</b>	<b>Atomic Kinematics</b>	<b>1</b>
1.1	Kinematics of an Atom with Two Energy Levels	1
1.2	Dicke States	5
1.3	Atomic Coherent States	7
1.4	Squeezed Atomic States	12
1.5	Atoms with $n > 2$ Energy Levels	17
1.5.1	Systems with $n$ Energy Levels	17
1.5.2	Systems with Three Energy Levels	20
1.6	Problems	21
<b>2</b>	<b>Atomic Dynamics</b>	<b>23</b>
2.1	Spin in a Constant Magnetic Field	23
2.2	A Two-level Atom in a Linearly Polarized Field	24
2.2.1	The Rotating Wave Approximation	24
2.3	A Two-level Atom in a Circularly Polarized Field	26
2.4	Evolution of the Bloch Vector	28
2.5	Dynamics of the Two-level Atom without the RWA	29
2.6	Collective Atomic Systems	33
2.7	Atomic System in a Field of a Single Pulse	39
2.8	Problems	42
<b>3</b>	<b>Quantized Electromagnetic Field</b>	<b>45</b>
3.1	Quantization of the Electromagnetic Field	45
3.2	Coherent States	47
3.3	Properties of the Coherent States	48
3.4	Displacement Operator	51
3.5	Squeezed States	54
3.6	Thermal States	58
3.7	Phase Operator	58
3.8	Regularized Phase Operator	63

VI | Contents

3.9	Phase Distribution	65
3.10	Problems	69
<b>4</b>	<b>Field Dynamics</b>	<b>71</b>
4.1	Evolution of a Field with Classical Pumping	71
4.2	Linear Parametric Amplifier	72
4.3	Evolution in the Kerr Medium	75
4.4	Second Harmonic Generation in the Dispersive Limit	77
4.5	Raman Dispersion	79
4.6	Problems	81
<b>5</b>	<b>The Jaynes–Cummings Model</b>	<b>83</b>
5.1	The Interaction Hamiltonian	83
5.2	The Spectrum and Wave Functions	85
5.3	Evolution Operator	87
5.4	The Classical Field Limit	90
5.5	Collapses and Revivals	92
5.5.1	The Dispersive Limit	93
5.5.2	Exact Resonance	95
5.6	The JCM with an Initial Thermal Field	97
5.7	Trapping States	99
5.8	Factorization of the Wave Function	101
5.9	Evolution in Field Phase Space	104
5.10	The JCM without RWA	105
5.10.1	Diagonalization of the Hamiltonian	106
5.10.2	Atomic Inversion	109
5.10.3	Classical Field Limit	110
5.11	Problems	111
<b>6</b>	<b>Collective Interactions</b>	<b>113</b>
6.1	The Dicke Model (Exactly Solvable Examples)	113
6.2	The Dicke Model (Symmetry Properties)	118
6.3	The Dicke Model (Symmetric Case)	121
6.4	The Zeroth-Order Approximation	122
6.4.1	The Weak Field Case	122
6.4.2	The Strong Field Case	123
6.5	Perturbation Theory	124
6.6	Revivals of the First and Second Orders	128
6.6.1	Revivals of the Second Order	130
6.7	Atom-Field Dynamics for Different Initial Conditions	132
6.7.1	Initial Number States	132
6.7.2	Coherent and Thermal Fields	134
6.8	Three-Level Atoms Interacting with Two Quantum Field Modes	136
6.9	Problems	141

<b>7</b>	<b>Atomic Systems in a Strong Quantum Field</b>	<b>143</b>
7.1	Dicke Model in a Strong Field	143
7.2	Factorization of the Wave Function	146
7.3	Evolution in Phase Space	148
7.4	Dicke Model in the Presence of the Kerr Medium	152
7.5	Generation of the Field Squeezed States	154
7.6	Coherence Transfer Between Atoms and Field	157
7.7	Resonant Fluorescence Spectrum	159
7.8	Atomic Systems with $n$ Energy Levels	162
7.8.1	Cascade Configuration $\Xi$	167
7.8.2	$\Lambda$ -Type Configuration	168
7.8.3	V-Type Configuration	169
7.9	Dicke Model in the Dispersive Limit	169
7.10	Two-Photon Dicke Model	172
7.11	Effective Transitions in Three-Level Atoms with $\Lambda$ Configuration	180
7.12	$N$ -Level Atoms of Cascade Configuration	183
7.13	Problems	186
<b>8</b>	<b>Quantum Systems Beyond the Rotating Wave Approximation</b>	<b>189</b>
8.1	Kinematic and Dynamic Resonances in Quantum Systems	189
8.2	Kinematic Resonances: Generic–Atom Field Interactions	192
8.3	Dynamic Resonances	198
8.3.1	Atom–Quantized Field Interaction	203
8.3.2	Atom–Classical Field Interaction	204
8.3.3	Interaction of Atoms with the Quantum Field in the Presence of Classical Fields	206
8.4	Dynamics of Slow and Fast Interacting Subsystems	212
8.4.1	Effective Field Dynamics	214
8.4.2	Effective Atomic Dynamics	215
8.5	Problems	216
<b>9</b>	<b>Models with Dissipation</b>	<b>217</b>
9.1	Dissipation and Pumping of the Quantum Field	217
9.2	Dicke Model with Dissipation and Pumping (Dispersive Limit)	219
9.3	Dicke Model with Dissipation (Resonant Case)	223
9.3.1	Initial Field Number State	226
9.3.2	Initial Field Coherent State	226
9.3.3	Factorized Dynamics	229
9.4	Strong Dissipation	231
9.4.1	Field–Field Interaction	234
9.4.2	Atom–Field Interaction	235
9.5	Problems	235

VIII | Contents

<b>10</b>	<b>Quasi-distributions in Quantum Optics</b>	237
10.1	Quantization and Quasi-distributions	237
10.1.1	Weyl Quantization Method	237
10.1.2	Moyal–Stratonovich–Weyl Quantization	240
10.1.3	Ordering Problem in $L(H)$	241
10.1.4	Star Product	242
10.1.5	Phase–Space Representation and Quantum–Classical Correspondence	243
10.2	Atomic Quasi-distributions	245
10.2.1	P Function	246
10.2.2	Q Function	247
10.2.3	Stratonovich–Weyl Distribution	250
10.2.4	$s$ -Ordered Distributions	251
10.2.5	Star Product	252
10.2.6	Evolution Equations	255
10.2.7	Large Representation Dimensions (Semiclassical Limit)	256
10.3	Field Quasi-distributions	262
10.3.1	P Function	262
10.3.2	Q Function	264
10.3.3	Wigner Function	265
10.3.4	$s$ -Ordered Distributions	266
10.4	Miscellaneous Applications	269
10.4.1	Kerr Hamiltonian	269
10.4.2	The Dicke Hamiltonian	271
10.5	Problems	276
<b>11</b>	<b>Appendices</b>	279
11.1	Lie Groups and Lie Algebras	279
11.1.1	Groups: Basic Concepts	279
11.1.2	Group Representations	281
11.1.3	Lie Algebras	282
11.1.4	Examples	284
11.2	Coherent States	294
11.2.1	Examples	295
11.3	Linear Systems	299
11.3.1	Diagonalization of the Time-independent Hamiltonian	301
11.3.2	Evolution Operator	302
11.3.3	Reference Formulas	303
11.4	Lie Transformation Method	304
11.5	Wigner $d$ Function	306
11.6	Irreducible Tensor Operators	311
	<b>References</b>	315
	<b>Index</b>	321
