

Index

a

- absorption
 - length 62
 - linear 35
- accumulation point 134, 136
- address beam 126
- address pulse 121
- adiabatic elimination
 - of fast variables 97
- allowed transitions of Nd in YAG 90
 - influence of mirror reflectivity 91
 - influence of temperature 91
- amplifier 62, 83
- angle tuning 164
- anti-soliton 79
- atomic coherence 27, 37, 49
- atomic configurations
 - ladder 44
 - lambda 44
 - V 44
- atomic interference 43, 50
- atomic polarization 27, 99
 - in phase 58
 - out of phase 58
- attenuator 62

b

- Bäcklund transformation 66, 74
- basin of attraction 120
- Beer–Lambert law 39, 57, 62, 89
 - nonlinear generalization 39
- Bianchi theorem 73
- binary memory 115
- birefringence 163

- bistability parameter 114
- black-body 4
- bleach 37, 40, 51, 62
- boundary conditions 129, 131
- bright soliton 215

c

- cavity eigenmodes 87, 91
- chaotic solution 135
- closure relation 29, 48
- coherence length 163
- conservation laws
 - energy 197
 - momentum 197
- conservative system 61
- critical pulse duration 123
- cryogenic hydrogen maser 97
- cubic approximation 98

d

- damping rate 89
- dark soliton 79, 215, 233
- degenerate optical parametric oscillator
 - bistability 185
 - chaotic solutions 186
 - periodic solutions 186
 - phase matching condition 188
 - self-pulsing instability 186
 - triply resonant configuration 188
- delay–differential equation 130
- destructive interference 46
- deterministic chaos 97, 134, 169
- difference frequency generation 147, 176

- conversion efficiency 178
 - phase matching condition 178
- dipole approximation 28, 47
- dispersion
 - linear 36
 - relations 34
- divergence time
 - characteristic 121
 - minimum 125
- Dulong and Petit law 20
- e**
