Foreword VII

Preface XIX

List of Authors XXIII

The Authors XXVII

List of Abbreviations XXXV

Part One The Physics 1

1 Setting the Scene 3

Ian C. Brock and Thomas Schörner-Sadenius

1.1 From the 1970s into the Twenty-first Century 3

1.1.1 Weak Neutral Currents 4

1.1.2 November Revolution 4

1.1.3 Third Generation 5

1.1.4 τ Lepton 5

1.1.5 B Mixing and CP Violation in b -Quark Systems 6

1.1.6 Gluon Discovery 6

1.1.7 W and Z Discoveries 7

1.1.8 LEP and the Standard Model 8

1.1.9 HERA and Proton Structure 8

1.1.10 Top-Quark Discovery 10

1.1.11 Searches for Higgs Particles and Supersymmetry 11

1.1.12 Tau-Neutrino Discovery 11

1.2 Problems of the Standard Model 12

1.3 Other Topics Connected to High Energy Physics 13

1.3.1 Neutrino Physics 13

1.3.2 Astroparticle Physics 16

1.3.3 Heavy Ion Physics 19

1.3.4 Spin Physics 20

Further Reading 21

2	The Standard Model: Our Picture of the Microcosm	23
	<i>Markus Diehl and Wolfgang Hollik</i>	
2.1	Introduction	23
2.2	Local Gauge Invariance	24
2.3	Formulation of QCD	27
2.4	Formulation of the Electroweak Standard Model	28
2.4.1	Gauge Fields	30
2.4.2	Fermion Fields and Their Gauge Interactions	31
2.4.3	The Higgs Field and Spontaneous Symmetry Breaking	31
2.4.4	Yukawa Interactions: Fermion Masses and Mixing	34
2.5	Renormalisation	37
2.6	Electroweak Parameters and Observables	39
2.7	Some Remarks on Quantum Chromodynamics	41
2.8	Symmetries	42
2.9	Mass Scales and Effective Theories	44
	References	46
3	Electroweak and Standard Model Tests: the Quest for Precision	47
	<i>Klaus Mönig and Georg Steinbrück</i>	
3.1	The Standard Model at Born Level	47
3.2	The Gain from Additional Precision	49
3.2.1	Sensitivity to New Physics in Loops	49
3.2.2	Sensitivity to Born-Level Effects at High Mass Scales	51
3.3	Measurements	51
3.3.1	Parameters Measured on the Z Resonance	52
3.3.2	W Boson Mass and Couplings	55
3.3.3	Two-Fermion Processes Off Resonance	58
3.3.4	Low Energy Data	60
3.4	Constraints from Precision Data	60
3.4.1	Status of Theoretical Predictions	61
3.4.2	Standard Model Constraints	62
3.4.3	Constraints on New Physics	65
3.4.4	Expectations from LHC and ILC	68
	References	69
4	Hard QCD: Still Going Strong	73
	<i>Sven-Olaf Moch and Klaus Rabbertz</i>	
4.1	Introduction	73
4.2	The Strong Coupling	75
4.3	Perturbative QCD at Colliders	76
4.4	Hard Parton Scattering	78
4.5	Parton Luminosity	80
4.6	Fragmentation Functions and Event Shapes	83
4.7	Jet Production	86
4.8	Gauge-Boson Production	89
4.9	Jet Shapes	91

4.10	Tests of the QCD Gauge Structure	93
4.11	Outlook	94
	References	94
5	Monte Carlo Generators and Fixed-order Calculations: Predicting the (Un)Expected	97
	<i>Stefan Gieseke and Zoltán Nagy</i>	
5.1	Fixed-Order Born-Level Calculations	97
5.2	Next-to-Leading Order Calculations	98
5.3	Next-to-Next-to-Leading Order Calculations	99
5.4	Leading-Order Parton Showers	99
5.4.1	Shower Evolution	100
5.4.2	The Splitting Operator	102
5.5	Implementations and Shower Schemes	104
5.5.1	Angular-Ordered Shower	104
5.5.2	Partitioned Dipole Shower with Leading-Colour Approximation	106
5.5.3	Antenna Dipole Shower with Leading-Colour Approximation	107
5.6	Matching Parton Showers to Fixed-Order Calculations	108
5.6.1	Born-Level Matching	108
5.6.2	Next-to-Leading Order Matching	110
5.7	Hadronisation	111
5.7.1	Independent Fragmentation	112
5.7.2	Lund String Fragmentation	113
5.7.3	Cluster Hadronisation	114
5.8	The Underlying Event	115
5.8.1	Relevance of the Underlying Event at Hadron Colliders	116
5.8.2	Measuring the Underlying Event	116
5.8.3	Modelling the Underlying Event in Monte Carlo Event Generators	117
	References	118
6	The Higgs Boson: Still Elusive After 40 Years	123
	<i>Markus Schumacher and Michael Spira</i>	
6.1	The Higgs Boson Mass	123
6.2	Higgs Boson Decays	126
6.3	Higgs Boson Production at the LEP Collider	127
6.4	Higgs Boson Production at Hadron Colliders	129
6.5	Past and Present Searches at LEP and Tevatron	131
6.5.1	Searches at LEP	132
6.5.2	Searches at the Tevatron	134
6.6	Prospects for Higgs Boson Searches at the LHC	136
6.7	Implications of Observation or Exclusion	139
	References	140
7	Supersymmetry	143
	<i>Herbert Dreiner and Peter Wienemann</i>	
7.1	Introduction	143
7.2	Supersymmetry Transformations and Fields	143

7.3	Superfields and Superpotential	145
7.4	Discrete Symmetries	146
7.5	<i>R</i> -Parity Conservation (P_6 Model) vs. <i>R</i> -Parity Violation (B_3 Model)	147
7.5.1	Model Building	148
7.5.2	Phenomenology	149
7.6	Measuring Supersymmetry	151
7.6.1	Searches at the LHC	151
7.6.2	Measuring SUSY Properties at the LHC	152
7.6.3	Measuring SUSY Properties at the ILC	155
7.6.4	SUSY Parameter Determination	157
7.7	Summary and Conclusions	159
	References	160
8	Quark Flavour Physics	163
	<i>Gudrun Hiller and Ulrich Uwer</i>	
8.1	Flavour Within the Standard Model	164
8.1.1	The CKM Quark Mixing Matrix	164
8.1.2	The Unitarity Triangle	166
8.2	Flavour and New Physics	169
8.2.1	Flavour Changing Neutral Currents	169
8.2.2	Null Tests	172
8.3	<i>B</i> -Meson Key Measurements	172
8.3.1	Production of <i>B</i> Mesons	173
8.3.2	Mixing of Neutral <i>B</i> Mesons	174
8.3.3	Measurement of the CP Violating Mixing Phases	178
8.3.4	Search for Very Rare Decays	184
8.4	Flavour at the Terascale – Outlook	185
	References	186
9	Top Quarks: the Peak of the Mass Hierarchy?	187
	<i>Peter Uwer and Wolfgang Wagner</i>	
9.1	Introduction	187
9.2	Top-Quark Pair Production in Hadronic Collisions	190
9.2.1	Cross-Section Calculations	190
9.2.2	Top–Antitop Cross-Section Measurements	192
9.2.3	Spin Correlations in Top-Quark Pair Production	193
9.2.4	Forward–Backward Charge Asymmetry	195
9.3	Single Top-Quark Production	195
9.3.1	Cross-Section Calculations	196
9.3.2	First Observation of Single Top Quarks	197
9.4	Top-Quark Decay	199
9.4.1	W-Boson Helicity in Top-Quark Decays	199
9.4.2	Measurement of \mathcal{R}_b	201
9.5	Top-Quark Mass	201
9.5.1	Mass Measurement Techniques	203
9.6	The Top Quark as a Window to New Physics	204

9.6.1	Top–Antitop Resonances	204
9.6.2	Non-Standard Model Sources of Single Top Quarks	204
9.6.3	Search for Non-Standard Models Top-Quark Decays	205
	References	206
10	Beyond SUSY and the Standard Model: Exotica	209
	<i>Christophe Grojean, Thomas Hebbeker and Arnd Meyer</i>	
10.1	Alternative Higgs	209
10.2	Technicolour, Composite Higgs and Partial Compositeness	211
10.3	Extra Dimensions, Strings and Branes	213
10.4	Grand Unified Theories	216
10.5	Extra Gauge Bosons	218
10.6	Leptoquarks	218
10.7	Unexpected Physics: Hidden Valley, Quirks, Unparticles...	219
10.8	Model-Independent Search for New Physics	220
	References	221
11	Forward and Diffractive Physics: Bridging the Soft and the Hard	225
	<i>Jochen Bartels and Kerstin Borras</i>	
11.1	Introduction	225
11.2	Cross Sections in $p p$ and $e p$ Scattering	225
11.3	Parton Densities, Small- x and BFKL Dynamics	228
11.4	Saturation	231
11.5	Diffractive Final States	233
11.6	Multiple Scattering, Underlying Event and AGK	235
11.7	Necessary Instrumentation at the LHC	237
	References	239
Part Two	The Technology	241
12	Accelerators: the Particle Smashers	243
	<i>Helmut Burkhardt, Jean-Pierre Delahaye and Günther Geschonke</i>	
12.1	Introduction	243
12.1.1	Why Are Existing Accelerators So Big?	244
12.1.2	Energy and Luminosity	244
12.2	LEP	246
12.3	Tevatron	250
12.3.1	Performance	251
12.3.2	Where Do the Protons and Antiprotons Come from?	252
12.4	HERA	253
12.5	LHC	255
12.6	Linear Collider	258
12.6.1	Acceleration	259
12.6.2	Superconducting Accelerating System	260
12.6.3	Normal-Conducting Acceleration System	260
12.6.4	Achieving the Luminosity	260
	References	263

13	Detector Concepts: from Technologies to Physics Results	265
	<i>Ian C. Brock, Karsten Büßer and Thomas Schörner-Sadenius</i>	
13.1	Introduction	265
13.2	Technical Concepts	265
13.3	Infrastructure	269
13.4	Organisation	270
13.5	ALEPH, DELPHI, L3 and OPAL at LEP	271
13.5.1	ALEPH	272
13.5.2	DELPHI	273
13.5.3	L3	274
13.5.4	OPAL	274
13.6	H1 and ZEUS at HERA	275
13.6.1	H1	276
13.6.2	ZEUS	277
13.7	CDF and DØ at the Tevatron	278
13.7.1	CDF	278
13.7.2	DØ	279
13.8	ATLAS and CMS at the LHC	280
13.8.1	ATLAS	281
13.8.2	CMS	282
13.9	ILD – a Detector Concept for the International Linear Collider	283
13.9.1	Requirements and Rationales	284
13.9.2	The ILD Detector Concept	284
13.9.3	The Challenge of Push–Pull Operations	286
	References	288
14	Tracking Detectors: Following the Charges	291
	<i>Jörn Große-Knetter, Rainer Mankel and Christoph Rembser</i>	
14.1	Introduction	291
14.2	Gaseous Detectors	292
14.2.1	Working Principle	292
14.2.2	Operation Modes of Gaseous Detectors	293
14.2.3	Gas Mixtures in Gaseous Detectors	295
14.2.4	Gaseous Detectors at Modern Experiments	296
14.2.5	Micro-Pattern Gas Detectors	298
14.3	Semiconductor Detectors	299
14.3.1	Silicon as Detector Material	300
14.3.2	Strip Detectors	301
14.3.3	Hybrid Pixel Detectors	302
14.3.4	Active Pixel Detectors	303
14.3.5	Radiation Tolerance	304
14.4	Track Reconstruction	306
14.4.1	Track Pattern Recognition	306
14.4.2	Track Fitting	307
14.5	Alignment	309

14.6	Tagging of Heavy Flavours	310
	References	311
15	Calorimetry: Precise Energy Measurements	313
	<i>Felix Sefkow and Christian Zeitnitz</i>	
15.1	Introduction	313
15.2	Basic Principles of Particle Detection	313
15.2.1	Energy Loss of e^\pm and Photons	314
15.2.2	Interaction of Hadrons with Matter	315
15.3	Particle Showers	316
15.3.1	Electromagnetic Cascades	316
15.3.2	Hadronic Cascades	318
15.4	Calorimeters: Response and Resolution	319
15.4.1	Response and Resolution of a Sampling Calorimeter for Electromagnetic Particles	320
15.4.2	Homogeneous Calorimeters	322
15.4.3	Response and Resolution of Hadron Calorimeters	322
15.4.4	Spatial Resolution	325
15.5	New Concepts	325
15.5.1	Dual-Readout Calorimetry	326
15.5.2	Particle-Flow Calorimetry	327
15.6	Summary	330
	References	330
16	Muon Detectors: Catching Penetrating Particles	333
	<i>Kerstin Hoepfner and Oliver Kortner</i>	
16.1	Sources of Muons	333
16.2	Energy Loss of Muons and Muon Identification	334
16.3	Measurement of Muon Momenta	336
16.4	Muon Identification in ATLAS and CMS	337
16.5	ATLAS and CMS Muon Chambers	339
16.5.1	Drift-Tube Detectors	340
16.5.2	Resistive-Plate Chambers	341
16.5.3	Cathode-Strip Chambers	342
16.6	Muon Track Reconstruction and Identification	343
	References	345
17	Luminosity Determination: Normalising the Rates	347
	<i>Ian C. Brock and Hasko Stenzel</i>	
17.1	Outline	347
17.2	Luminosity Determination in e^+e^- Machines	348
17.3	Luminosity Determination at HERA	351
17.4	Luminosity Determination at Hadron Colliders	353
17.4.1	Luminosity from Counting Inelastic Events	353
17.4.2	Luminosity from Elastic Scattering	358
17.4.3	Luminosity from W/Z Production	359
	References	360

18	Trigger Systems in High Energy Physics Experiments	363
	<i>Eckhard Elsen and Johannes Haller</i>	
18.1	Introduction	363
18.2	Elements of a Trigger System	365
18.2.1	Clocked Readout and Triggering	366
18.2.2	Central Trigger Logic	367
18.2.3	Buffering	368
18.2.4	Dead-Time	368
18.2.5	Multi-level Trigger Systems and Event Building	370
18.2.6	Trigger Rates and Downscale	371
18.3	Trigger Systems in Modern HEP Experiments	372
18.3.1	Trigger Strategies	372
18.3.2	Example HERA: the Trigger System of the H1 Experiment	374
18.3.3	Example LHC: the Trigger System of the ATLAS Experiment	375
18.3.4	Example LC: Trigger-Less Data Acquisition at the ILC	378
18.4	Trigger Systems and HEP Data Analysis	379
18.5	Summary and Outlook	381
	References	381
19	Grid Computing in High Energy Physics	383
	<i>Wolfgang Ehrenfeld and Thomas Kreß</i>	
19.1	Introduction	383
19.2	Access to the Grid	385
19.3	Tier-0 Grid Layer	386
19.4	Tier-1 Grid Layer	386
19.5	Tier-2 Grid Layer	386
19.6	Tier Centres' Hardware Components	387
19.7	Tier-3 Grid layer	388
19.8	User Analysis on the Grid	390
19.9	National Analysis Facility	392
19.10	Last Steps of a Typical HEP Analysis	393
19.11	Cloud Computing – the Future?	394
19.12	Data Preservation	395
	References	396
Part Three The Organisation		399
20	The Sociology and Management of Terascale Experiments: Organisation and Community	401
	<i>R. Michael Barnett and Markus Nordberg</i>	
20.1	Introduction	401
20.2	Performance and Instruments of Funding	401
20.3	Technology, Project Structures and Organisation	405
20.4	From Data Analysis to Physics Publications – the Case of ATLAS	408
20.5	Budget and Time Considerations	410
20.6	Conclusions	412
	Further Reading	413

21	Funding of High Energy Physics	415
	<i>Klaus Ehret</i>	
21.1	Outline	415
21.2	High Energy Physics – an International Effort between Accelerator Laboratories and Universities	415
21.3	Funding and Interplay with Politics	416
21.3.1	Accelerator Laboratories for High Energy Physics	417
21.3.2	Constitution of International Collaborations	419
21.3.3	Project Funds for University Groups	420
21.4	Federal Structure of Science Policy and Funding in Germany	421
21.4.1	Federal Ministry of Education and Research – BMBF	421
21.4.2	Institutions for Basic Scientific Research in Germany	422
21.4.3	Project Funding for Basic Research	423
21.5	European Research Area and EC Funding	426
21.5.1	European Research Council – ERC	426
21.5.2	Seventh Research Framework Programme – FP7	427
21.6	Strategic Decision-Making	428
21.7	Funding of the LHC and Its Experiments	429
21.8	Summary and Outlook	430
22	The Role of the Big Labs	431
	<i>Albrecht Wagner</i>	
22.1	Why Does Particle Physics Need Large Laboratories?	431
22.2	Examples of Large Laboratories	432
22.3	Complementarities of Universities and Large Laboratories	433
22.4	Key Functions and Assets of Large Laboratories	434
22.4.1	Research and Development of Accelerators and Experiments	434
22.4.2	Construction	435
22.4.3	Operation	436
22.4.4	Computing	437
22.4.5	User Support	438
22.4.6	Management	438
22.4.7	Scientific Staff at Large Laboratories	438
22.5	Collaborations and Their Individual Members	439
22.6	Organisational Models for Particle Physics Facilities	440
22.7	Access to Large Laboratories and Their Facilities	441
22.8	Strategic Planning for Different Laboratories and Regions	441
22.9	Decision Process and the Role of Politics	442
22.10	Possible Future Developments	444
22.11	Summary and Outlook	446
23	Communication, Outreach and the Terascale	449
	<i>James Gillies and Barbara Warmbein</i>	
23.1	Why Communicate?	450
23.2	The Place of Communication Within an Organisation	453
23.3	Audiences and Tools – the Basics	454

23.4	How to Engage with Your Audience	455
23.5	Communication at the Terascale	459
	Appendix: CERN Strategic Communication Plan 2009–2013, Summary	462
	Index	465
