Dedication V

Preface XIII

## List of Symbols XVII

### **1** Introduction 1

- 1.1 Goals and Methods of Continuum Mechanics 1
- 1.2 The Main Hypotheses of Continuum Mechanics 3

### 2 Kinematics of the Deformed Continuum 5

- 2.1 Dynamics of the Continuum in the Lagrangian Perspective 5
- 2.2 Dynamics of the Continuum in the Eulerian Perspective 8
- 2.3 Scalar and Vector Fields and Their Characteristics 8
- 2.4 Theory of Strains 13
- 2.5 The Tensor of Strain Velocities 24
- 2.6 The Distribution of Velocities in an Infinitesimal Continuum Particle 25
- 2.7 Properties of Vector Fields. Theorems of Stokes and Gauss 30

### 3 Dynamic Equations of Continuum Mechanics 39

- 3.1 Equation of Continuity 39
- 3.2 Equations of Motion 43
- 3.3 Equation of Motion for the Angular Momentum 51
- 4 Closed Systems of Mechanical Equations for the Simplest Continuum Models 55
- 4.1 Ideal Fluid and Gas 55
- 4.2 Linear Elastic Body and Linear Viscous Fluid 58
- 4.3 Equations in Curvilinear Coordinates 63
- 4.3.1 Equation of Continuity 64
- 4.3.2 Equation of Motion 65
- 4.3.3 Gradient of a Scalar Function 66
- 4.3.4 Laplace Operator 66
- 4.3.5 Complete System of Equations of Motion for a Viscous, Incompressible Medium in the Absence of Heating 67

- 5 Foundations and Main Equations of Thermodynamics 69
- 5.1 Theorem of the Living Forces 69
- 5.2 Law of Conservation of Energy and First Law of Thermodynamics 72
- 5.3 Thermodynamic Equilibrium, Reversible and Irreversible Processes 76
- 5.4 Two Parameter Media and Ideal Gas 77
- 5.5 The Second Law of Thermodynamics and the Concept of Entropy 80
- 5.6 Thermodynamic Potentials of Two-Parameter Media 83
- 5.7 Examples of Ideal and Viscous Media, and Their Thermodynamic Properties, Heat Conduction 86
- 5.7.1 The Model of the Ideal, Incompressible Fluid 87
- 5.7.2 The Model of the Ideal, Compressible Gas 88
- 5.7.3 The Model of Viscous Fluid 90
- 5.8 First and Second Law of Thermodynamics for a Finite Continuum Volume 93
- 5.9 Generalized Thermodynamic Forces and Currents, Onsager's Reciprocity Relations 94

### 6 Problems Posed in Continuum Mechanics 97

- 6.1 Initial Conditions and Boundary Conditions 97
- 6.2 Typical Simplifications for Some Problems 101
- 6.3 Conditions on the Discontinuity Surfaces 105
- 6.4 Discontinuity Surfaces in Ideal Compressible Media 111
- 6.5 Dimensions of Physical Quantities 118
- 6.6 Parameters that Determine the Class of the Phenomenon 120
- 6.7 Similarity and Modeling of Phenomena 127

### 7 Hydrostatics 131

- 7.1 Equilibrium Equations 131
- 7.2 Equilibrium in the Gravitational Field 132
- 7.3 Force and Moment that Act on a Body from the Surrounding Fluid 133
- 7.4 Equilibrium of a Fluid Relative to a Moving System of Coordinates 135

### 8 Stationary Continuum Movement of an Ideal Fluid 137

- 8.1 Bernoulli's Integral 137
- 8.2 Examples of the Application of Bernoulli's Integral 139
- 8.3 Dynamic and Hydrostatic Pressure 141
- 8.4 Flow of an Incompressible Fluid in a Tube of Varying Cross Section 142
- 8.5 The Phenomenon of Cavitation 143
- 8.6 Bernoulli's Integral for Adiabatic Flows of an Ideal Gas 144
- 8.7 Bernoulli's Integral for the Flow of a Compressible Gas 147

## 9 Application of the Integral Relations on Finite Volumes 151

- 9.1 Integral Relations 151
- 9.2 Interaction of Fluids and Gases with Bodies Immersed in the Flow 153

### **10 Potential Flows for Incompressible Fluids** *159*

10.1 The Cauchy–Lagrange Integral 160

- Some Applications for the General Theory of Potential Flows 10.2 161
- Potential Movements for an Incompressible Fluid 163 10.3
- Movement of a Sphere in the Unlimited Volume of an Ideal, 10.4Incompressible Fluid 171
- Kinematic Problem of the Movement of a Solid Body in the Unlimited 10.5 Volume of an Incompressible Fluid 176
- 10.6 Energy, Movement Parameters and Moments of Movement Parameters for a Fluid during the Movement of a Solid Body in the Fluid 177
- Stationary Potential Flows of an Incompressible Fluid in the Plane 11 181
- Method of Complex Variables 181 11.1
- Examples of Potential Flows in the Plane 183 11.2
- 113 Application of the Method of Conformal Mapping to the Solution of Potential Flows around a Body 192
- Examples of the Application of the Method of Conformal Mapping 195 11.4
- Main Moment and Main Vector of the Pressure Force Exerted on a 11.5 Hydrofoil Profile 199

#### 12 Movement of an Ideal Compressible Gas 203

- 12.1 Movement of an Ideal Gas Under Small Perturbations 203
- 12.2 Propagation of Waves with Finite Amplitude 207
- 12.3 Plane Vortex-Free Flow of an Ideal Compressible Gas 211
- Subsonic Flow around a Thin Profile 215 12.4
- 12.5 Supersonic Flow around a Thin Profile 216

#### 13 Dynamics of the Viscous Incompressible Fluid 219

- Rheological Laws of the Viscous Incompressible Fluid 219 13.1
- Equations of the Newtonian Viscous Fluid and Similarity Numbers 221 13.2
- Integral Formulation for the Effect of Viscous Fluids on a Moving 13.3 Bodv 223
- 13.4 Stationary Flow of a Viscous Incompressible Fluid in a Tube 226
- 13.5 Oscillating Laminar Flow of a Viscous Fluid through a Tube 231
- 13.6 Simplification of the Navier–Stokes Equations 233
- 14 Flow of a Viscous Incompressible Fluid for Small Reynolds Numbers 237
- General Properties of Stokes Flows 237 14.1
- Flow of a Viscous Fluid around a Sphere 240 14.2
- 14.3 Creeping Spatial Flow of a Viscous Incompressible Fluid 247

#### 15 The Laminar Boundary Layer 251

- Equation of Motion for the Fluid in the Boundary Layer 251 15.1
- Asymptotic Boundary Layer on a Plate 255 15.2
- 15.3 Problem of the Injected Beam 257

#### 16 **Turbulent Flow of Fluid** 263

- General Information on Laminar and Turbulent Flows 263 16.1
- 16.2 Momentum Equation of a Viscous Incompressible Fluid 264
- 16.3 Equations of Heat Inflow, Heat Conduction and Diffusion 267

- X | Contents
  - 16.4 The Condition for the Beginning of Turbulence 269
  - 16.5 Hydrodynamic Instability 270
  - 16.6 The Reynolds Equations 272
  - 16.7 The Equation of Turbulent Energy Balance 277
  - 16.8 Isotropic Turbulence 281
  - 16.9 The Local Structure of Fully Developed Turbulence 291
  - 16.10 Models of Turbulent Flow 301
  - 16.10.1 Semi-empirical Theories of Turbulence 302
  - 16.10.2 The Use of Transport Equations 308 References 312

#### Appendix A Foundations of Vectorial and Tensorial Analysis 315

- A.1 Vectors 316
- A.2 Tensors 325
- A.3 Curvilinear Systems of Coordinates and Physical Components 338
- A.4 Calculation of Lengths, Surface Areas and Volumes 341
- A.5 Differential Operators and Integral Theorems 344

#### Appendix B Some Differential Geometry 349

- B.1 Curves on a Plane 349
- B.2 Vectorial Definition of Curves 350
- B.3 Curvature of a Curve in the Plane 353
- B.4 Curves in Space 355
- B.5 Curvature of Spatial Curves 358
- B.6 Surfaces in Space 360
- B.7 Fundamental Forms of the Surface 363
- B.8 Curvature of a Curve on the Surface 367
- B.9 Internal Geometry of a Surface 371
- B.10 Surface Vectors 376
- B.11 Geodetic Lines on a Surface 379
- B.12 Vector Fields on the Surface 384
- B.13 Hybrid Tensors 386

#### Appendix C Foundations of Probability Theory 389

- C.1 Events and Set of Events 389
- C.2 Probability 390
- C.3 Common and Conditional Probability, Independent Events 391
- C.4 Random Variables 392
- C.5 Distribution of Probability Density and Mean Values 393
- C.6 Generalized Functions 394
- C.7 Methods of Averaging 396
- C.8 Characteristic Function 398
- C.9 Moments and Cumulants of Random Quantities 400
- C.10 Correlation Functions 402
- C.11 Poisson, Bernoulli and Gaussian Distributions 404
- C.12 Stationary Random Functions and Homogeneous Random Fields 408

- C.13 Isotropic Random Fields 410
- C.14 Stochastic Processes, Markovian Processes and Chapman–Kolmogorov Integral Equation 412
- C.15 Differential Equations of Chapman–Kolmogorov et al. 415
- C.16 Stochastic Differential Equations and the Langevin Equation 427

#### Appendix D Basics of Complex Analysis 433

- D.1 Complex Numbers 433
- D.1.1 Operations with Complex Numbers 433
- D.1.2 Geometrical Interpretation of Complex Numbers 434
- D.2 Complex Variables 436
- D.2.1 Geometrical Notions 436
- D.2.2 Functions of a Complex Variable 437
- D.2.3 Differentiation and Analyticity of Complex Functions 438
- D.3 Elementary Functions 439
- D.3.1 Functions 439
- D.3.2 Joukowski Function 442
- D.4 Integration of Complex Variable Functions 443
- D.4.1 Integral of Complex Variable Functions 443
- D.4.2 Some Theorems of Integral Calculus in Simply Connected Regions 444
- D.4.3 Extension of Integral Calculus to Multiply Connected Regions 446
- D.4.4 Cauchy Formula 448
- D.5 Representation of a Function as a Series 450
- D.5.1 Taylor Series 450
- D.5.2 Laurent Series 450
- D.6 Singular Points 452
- D.6.1 Theorem about Residues 453
- D.6.2 Infinitely Remote Point 456
- D.7 Conformal Transformations 458
- D.7.1 Notion of Conformal Transformation 458
- D.7.2 Main Problem 461
- D.7.3 Correspondence of Boundaries 462
- D.7.4 Linear Fractional Function 462
- D.7.5 Particular Cases 464
- D.8 Application of the Theory of Complex Variables to Boundary-Value Problems 467
- D.8.1 Harmonic Functions 467
- D.8.2 Dirichlet Problem 468
- D.9 Physical Representations and Formulation of Problems 470
- D.9.1 Plane Field and Complex Potential 470
- D.9.2 Examples of Plane Fields 474 References to Appendix 481
