Contents

*Karl Schwarzschild Lecture:*
Dissecting galaxies with quantitative spectroscopy of the brightest stars in the Universe
By Rolf-Peter Kudritzki (With 20 Figures) ........................................ 1

*Ludwig Biermann Award Lecture:*
Pulsations and planets: The asteroseismology-extrasolar-planet connection
By Sonja Schuh (With 4 Figures) .................................................. 29

*Ludwig Biermann Award Lecture:*
Stellar archaeology: Exploring the Universe with metal-poor stars
By Anna Frebel (With 5 Figures) .................................................. 53

Quantitative solar spectroscopy
By Klaus Wilhelm (With 7 Figures) ............................................. 81

Metallicity and kinematical clues
To the formation of the Local Group
By Rosemary Wyse (With 5 Figures) ............................................. 99

Probing dark matter, galaxies and the expansion history of the Universe with Ly$α$ in absorption and emission
By Martin Haehnelt (With 14 Figures) ......................................... 117

Hypervelocity stars in the Galactic halo
By Holger Baumgardt ............................................................... 133

Schwarzschild modelling of elliptical galaxies and their black holes
By Jens Thomas (With 4 Figures) .................................................. 143

Star and protoplanetary disk properties in Orion’s suburbs
By Roy van Boeckel, Min Fang, Wei Wang, Andrés Carmona, Aurora Sicilia-Aguilar, and Thomas Henning (With 4 Figures) .................................................. 155

Molecular gas at high redshift
By Fabian Walter, Chris Carilli, and Emanuele Daddi (With 1 Figure) ...... 167
