

Index

Symbols

R parameter, 164, 176, 363
r-element, 267
s-element, 48, 232, 242, 246, 380
S-factor, 40
 Δ parameter, 367
 A parameter, 366
 R_2 parameter, 167

A

absolute magnitude, 18, 118, 147, 152, 306, 317, 427
 absorption-feature index, 455, 475
 abundance, 363
 activity–age relationship, 358
 adiabatic temperature gradient, 245
 AGB-manqué, 199, 200
 age determination, 299, 339, 342, 356, 394, 422
 age–metallicity degeneracy, 417, 420, 426, 460
 age–metallicity relationship, 212, 348, 399, 460
 alpha-element enhancement, 139, 435
 anomalous cepheid, 164, 190, 201
 apparent magnitude, 13
 astrophysical factor, 40
 atomic diffusion, 19, 65, 66, 103, 305, 311, 342, 345

B

Bailey diagram, 192
 baryon, 3, 5, 368
 basic equation, 19
 beryllium, 49, 94, 343
 Big Bang, 368, 400
 black body, 3
 Blue Hook star, 28, 132, 183, 188, 189
 Blue Straggler, 110, 120, 402, 440, 473
 bolometric correction, 13, 14, 85, 138, 209, 296, 317, 342

bolometric magnitude, 268, 269, 312, 330
 – of the Sun, 13
 born-again AGB scenario, 272
 boron, 70
 boundary condition, 22, 60, 340, 341
 boundary of the convective region, 26, 27, 100, 186, 241
 bound–bound transition, 49, 69
 bound–free transition, 49, 69, 154
 breathing pulse, 21, 168, 169
 brown dwarf, 55, 84

C

Cameron–Fowler mechanism, 397
 carbon star, 255
 Cepheid instability strip, 190, 273
 Cepheid period–luminosity relation, 197, 201, 263
 Cepheid variable, 190
 Chandrasekhar mass, 278
 chemical element, 6, 29, 253, 455
 CNO cycle, 28, 43, 95, 123, 156, 170, 237, 341, 379
 collision induced absorption, 54
 colour index, 12, 394, 468
 colour–magnitude diagram, 6, 91, 294
 composite stellar population, 144, 211, 212, 332, 334, 399
 Compton scattering, 49
 conductive energy transport, 23
 conductive opacity, 23, 49, 55, 323
 continuity of mass, 20
 convection, 19, 23, 24, 29, 71, 74, 147, 191, 221, 287, 341
 convective energy transport, 23, 27, 287
 convective mixing, 29, 69, 73, 301
 convective velocity, 16, 27, 65, 74, 245, 255, 362
 core collapse, 48, 113
 core helium burning, 47

core hydrogen burning, 42
 core mass–luminosity relation, 125, 129, 144, 239, 256, 259, 427
 cosmological constant, 1, 3
 cosmological parameter, 3, 152, 371
 cosmological principle, 1, 3
 Coulomb barrier, 41
 Coulomb interaction, 34, 84, 165, 281, 307, 340, 400
 critical density, 2
 cross section, 29, 41, 106, 341, 377
 crystallisation, 35, 277, 281, 282, 289
 cumulative age distribution, 251, 423

D

DA white dwarf, 300, 301, 350
 dark matter, 2, 4, 84, 443
 DB white dwarf, 300, 301
 Debye temperature, 281, 282, 409
 degeneracy parameter, 31, 33, 62, 430
 degenerate core, 10, 19, 21, 83, 124, 163, 231, 278, 302, 305
 diffusion approximation, 22, 49, 58
 diffusive process, 21, 73, 223, 239, 254, 372
 disruption timescale, 436
 distance modulus, 148, 299, 308, 329, 338, 399, 409, 430
 dynamical evolution, 112, 351, 435, 446
 dynamo generation, 77

E

early asymptotic giant branch, 232
 early helium-flasher, 186
 EC 14026, 205
 Eddington approximation, 59, 60
 Eddington luminosity, 269
 Eddington–Sweet timescale, 72
 edge-detection algorithm, 312
 effective temperature, 8, 11, 38, 91, 128, 149, 170, 177, 181, 211, 228, 325
 electron degeneracy, 6, 31, 32, 34, 55, 122, 184, 232, 291
 electron mean molecular weight, 335
 electron scattering, 3, 49, 56, 115, 164
 electron screening, 42
 elementary stellar population, 10
 energy generation coefficient, 40
 energy transport, 14, 22, 55, 191, 262
 energy transport equation, 21, 59
 equation of state, 20, 26, 58, 278, 420
 equation of stellar structure, 8, 22
 evolutionary track, 10, 59, 99, 114, 141, 156, 174, 269, 296, 419
 exchange correction, 36

extinction law, 474
 extremely hot horizontal branch star, 206, 385

F

fast-rotating massive star, 396
 Fermi energy, 124, 278
 Fermi–Dirac function, 32
 first dredge up, 252, 374, 376
 fitting function, 460, 470
 free–free transition, 49
 Friedmann–Robertson–Walker metrics, 1, 163
 fully convective star, 78, 87

G

galaxy, 1, 4, 204, 211, 334, 402, 433, 443
 Gamow peak, 41, 341
 globular cluster, 110, 306, 314, 329, 374, 378, 428, 477
 gravitational energy, 88, 94, 122, 168, 209, 234, 270
 gravitational potential, 73
 grey atmosphere, 58–60, 86

H

Hayashi track, 9, 115
 heavy elements distribution, 339, 394
 helioseismology, 66, 103, 342
 helium burning, 47
 helium flash-induced mixing, 101, 131, 133, 186, 189
 helium-ionisation zone, 191
 Hertzsprung gap, 123
 Hertzsprung–Russell diagram (HRD), 8
 horizontal branch, 10, 63, 169, 183, 220, 317, 318
 horizontal branch type, 464, 466
 horizontal method, 343, 345
 hot helium-flasher, 184–186
 hot-bottom burning, 240
 Hubble constant, 2
 hydrogen burning, 9, 42, 68, 95, 114, 127, 134, 141, 163, 179, 208
 – shell, 9, 45, 79, 83, 122, 154, 170, 198, 271, 303, 404
 hydrostatic equilibrium equation, 287

I

ideal gas, 122, 237, 281
 initial mass function, 15, 256, 296, 435
 initial-final mass relation, 256
 instability strip, 120, 180, 190, 192, 318, 363
 integrated colour, 18, 419, 420, 436, 446, 477
 integrated magnitude, 17, 380, 399, 411, 430
 integrated spectrum, 412, 436, 463
 intermediate-mass star, 12, 45, 122, 256, 275

internal gravity wave, 75, 108
 interstellar extinction, 321, 331
 interstellar matter, 231
 ionisation, 3, 30, 34, 37, 51, 69, 84, 99, 191,
 192, 221, 262, 320, 330, 368
 isochrone, 8, 10, 15, 134, 180, 275, 296, 305,
 316, 351, 352, 370, 389, 399, 411, 412, 464,
 471, 475
 isothermal core, 122, 288

J

Johnson–Cousins system, 13, 197, 314, 415,
 417

K

Kelvin–Helmholtz timescale, 30, 83
 kinetic energy, 22, 31, 40, 75, 115
 Kramers Law, 165

L

Large Magellanic Cloud, 204, 212, 263
 late thermal pulse, 276
 Ledoux criterion, 26
 Lick indices, 456, 459, 460, 471, 473, 474
 light element, 3, 94, 139, 231, 252, 379, 385,
 397
 line index, 475
 lithium depletion, 107
 Local Group, 110, 151, 190, 202, 203, 243, 306,
 329
 local thermodynamical equilibrium, 19, 275
 long period variable, 197, 258, 260
 luminosity, 8, 9, 13, 19, 30, 47, 61, 73, 75, 97,
 99, 104, 106, 117, 120, 121, 128, 134, 141,
 144, 151, 161, 169, 180, 195, 209, 228, 236,
 256, 262, 269, 271, 280, 282, 287, 304, 318,
 320, 326, 340, 432, 437, 439, 444
 luminosity function, 15, 118, 143, 151, 254,
 255, 350, 357

M

magnetic field, 19, 62, 71, 77, 116, 206
 magnitude zero point, 314
 main sequence fitting, 306, 333, 395
 main sequence lifetime, 11, 98, 141, 373
 main sequence phase, 6, 11, 280, 369, 462
 mass loss, 10, 61, 171, 180, 189, 228, 230, 240,
 251, 254, 270, 373, 413, 440
 massive AGB star, 48, 258, 396
 mass-to-light ratio, 443
 mass-to-luminosity ratio, 365
 mass–luminosity relation, 92, 93
 mass–radius relation, 94, 335
 mass–radius relationship, 90, 278

mean free path, 21, 24, 55
 mean molecular weight, 21, 34, 96, 122, 127,
 230, 280
 Mestel law, 279, 280
 Mg–Al anti-correlation, 379
 Milky Way, 212, 287, 348, 423, 428
 Mira variable, 240, 261
 mixing length, 74, 341, 342
 – calibration, 345
 – flavour, 148
 – theory, 7, 14, 24, 39, 87, 146
 model atmosphere, 6, 12, 58, 59, 148, 215, 365,
 427, 470
 molecular cloud, 397, 398, 435
 molecules formation, 36
 multiple population, 177, 220, 348, 385, 388,
 396, 479

N

Na–O anti-correlation, 379–381, 385, 392
 neon diffusion, 286, 287
 neutrino, 42, 106
 neutron, 48, 113, 252, 253
 neutron capture, 42, 241, 246, 247, 252, 253,
 267
 neutron source, 246, 247, 251
 nuclear reaction, 21, 30, 47, 79, 95, 106, 163,
 247, 267, 304, 380, 396
 nuclear reaction cross section, 41
 nuclear reaction rate, 40, 237, 340, 341
 nucleocosmochronology, 266
 number count, 15, 441

O

open cluster, 108, 111, 329, 349, 359, 477
 optical depth, 22, 58, 86, 287
 overshooting, 26, 28, 74, 100, 166, 249, 292,
 377, 426, 451

P

perfect gas, 26, 31, 165, 279
 period–luminosity, 65
 Petersen diagram, 120, 193
 PG 1159 star, 273
 phase diagram, 283–285
 phase transition, 31, 56, 95, 129, 130, 136, 282,
 284
 photometric filter, 7, 13, 137, 179, 209, 311,
 332, 385, 449
 photometric system, 7, 12, 312, 357, 445
 photosphere, 8, 9, 59, 84, 103, 294, 300, 427
 Planck function, 49
 planetary nebula, 240, 268
 Population I, 62, 190

Population II, 171, 190, 228
 Population II Cepheid, 164, 196
 Population III, 132, 186
 post-early asymptotic giant branch evolution, 268
 pre-main sequence, 75
 pressure ionisation, 36, 85
 pressure scale height, 67, 100, 146, 150, 245, 362
 primordial helium, 3, 217, 362, 395
 primordial lithium, 368, 369, 374
 proton, 42, 66, 106, 186, 247, 248, 255, 272
 pseudo-continuum, 456, 457, 471
 pseudo-primary element, 87
 pulsational-period change, 195
 pulse-driven convection zone, 272
 p-p chain, 42, 44, 79, 89, 95, 106, 126, 187, 237, 341, 407

R

radiation pressure, 37, 62, 64, 165, 221, 266
 radiative acceleration, 65, 69
 radiative energy transport, 21, 22, 123
 radiative flux, 22, 59, 70, 85, 187, 215, 261
 radiative levitation, 69, 71, 105, 158, 189, 214, 218, 343, 363, 371, 426, 467
 radiative temperature gradient, 245
 radius of avoidance, 119
 Rayleigh scattering, 49, 52
 Rayleigh–Taylor instability, 292
 recombination, 3, 8, 70, 85, 91
 red clump, 163, 208, 209, 329, 346, 463, 466
 red clump star, 206
 red giant branch, 6, 9, 62, 123, 312
 red giant branch transition, 129
 red giant star, 260, 312
 reddening, 148, 151, 201, 306, 308, 321, 338, 343, 347, 352, 367, 368, 378
 reddening estimation, 351
 redshift, 5, 6, 149, 412, 418, 443, 469
 Reimers mass loss formula, 424
 relative main sequence fitting, 347
 resolved stellar population, 7, 15
 response function, 13, 470
 Rose system, 458, 459
 Rosseland mean opacity, 49, 52, 70, 164
 rotation, 19, 71, 107, 156, 159, 217, 264, 358, 443
 rotational mixing, 75
 RR Lyrae instability strip, 63, 151, 181, 190, 192, 193, 197, 318, 320, 325, 343, 345, 346, 363
 RR Lyrae star, 163, 190, 191, 202, 320, 322, 324, 365, 395

S

Saha equation, 34, 37, 38
 Sakurai's object, 270, 273
 Salpeter initial mass function, 16, 143, 431, 437
 Schönberg–Chandrasekhar limit, 122
 Schwarzschild criterion, 25, 73, 244, 245
 second parameter, 164, 180–182, 362, 385, 388
 secondary element, 42, 44, 47, 95, 170
 semi-convection, 26, 74, 167, 288
 simple stellar population, 10, 177, 208, 209, 356
 Small Magellanic Cloud, 256
 solar heavy element distribution, 8, 141
 solar standard model, 61
 spiral galaxy, 451
 Spite-plateau, 369–371
 stability, 73, 78, 165, 244
 standard candle, 83, 163, 171, 190, 232, 306, 312, 317, 320
 star formation, 5, 15, 209, 280, 305, 397, 474
 star formation history, 202, 211, 256, 314, 316, 332, 357
 star formation rate, 358, 399
 statistical fluctuation, 17, 401, 411, 437, 439, 463, 472
 stellar atmosphere, 12, 22, 58, 137, 188, 455
 stellar model, 58, 78, 95, 183, 214, 257
 stellar pulsation, 191
 stellar spectrum, 389, 412, 450, 467
 stellar structure equation, 19, 28, 70
 Strömgren filter, 356, 394
 subgiant branch, 121
 surface brightness fluctuation, 448
 SX Phoenicis star, 120
 synthetic AGB model, 257, 258
 synthetic CMD, 15, 151, 332, 409
 synthetic horizontal branch, 177, 318, 323, 386, 463

T

tachocline mixing, 373
 Tayler–Spruit instability, 78
 thermal pulse, 10, 168, 200, 237, 272, 292
 thermal runaway, 47, 131, 237, 303
 thermohaline mixing, 26, 78
 Thomson scattering, 49
 tip of the red giant branch, 154, 312
 turbulence, 40, 72, 224, 226, 310, 374, 376, 377
 turbulence pressure, 39
 turn off, 98
 turn off point, 11
 Type Ia supernova, 1

U

unresolved binary, 16, 351, 409
 unresolved stellar population, 6, 449, 456, 467, 473, 475
 upper main sequence, 98
 UV upturn, 467, 469

V

Vega, 13
 vertical method, 343, 345, 394
 very late thermal pulse, 277
 very low-mass (VLM) star, 84
 virial theorem, 9, 83, 95, 278

W

weak interaction process, 43

white dwarf, 10

- cooling, 12, 168, 184, 231, 269, 275, 334, 350
- envelope, 275, 276
- fitting, 334
- isochrone, 12, 296, 334
- luminosity, 286
- luminosity function, 350

Y

yield, 85, 216, 267

Z

zero age

- horizontal branch, 159, 169
- main sequence, 37, 60, 84

zero point, 404, 449

- photometric system, 151, 343, 368, 404
