### Preface XI

<b>1</b>	<b>Introduction to the Distribution Theory</b>	<b>1</b>
1.1	Short History	1
1.2	Fundamental Concepts and Formulae	2
1.2.1	Normed Vector Spaces: Metric Spaces	3
1.2.2	Spaces of Test Functions	6
1.2.2.1	The Space $\mathcal{D}^m(\Omega)$	9
1.2.2.2	The Space $\mathcal{D}(\Omega)$	10
1.2.2.3	The Space $\mathcal{E}$	11
1.2.2.4	The Space $\mathcal{D}$ (the Schwartz Space)	11
1.2.2.5	The Space $\mathcal{S}$ (the Space Functions which Decrease Rapidly)	14
1.2.3	Spaces of Distributions	15
1.2.3.1	Equality of Two Distributions: Support of a Distribution	20
1.2.4	Characterization Theorems of Distributions	27
1.3	Operations with Distributions	31
1.3.1	The Change of Variables in Distributions	31
1.3.2	Translation, Symmetry and Homothety of Distributions	36
1.3.3	Differentiation of Distributions	40
1.3.3.1	Properties of the Derivative Operator	45
1.3.4	The Fundamental Solution of a Linear Differential Operator	58
1.3.5	The Derivation of the Homogeneous Distributions	62
1.3.6	Dirac Representative Sequences: Criteria for the Representative Dirac Sequences	69
1.3.7	Distributions Depending on a Parameter	81
1.3.7.1	Differentiation of Distributions Depending on a Parameter	81
1.3.7.2	Integration of Distributions Depending on a Parameter	84
1.3.8	Direct Product and Convolution Product of Functions and Distributions	88
1.3.8.1	Properties of the Direct Product	90
1.3.8.2	The Convolution Product of Distributions	92
1.3.8.3	The Convolution of Distributions Depending on a Parameter: Properties	102

1.3.8.4	The Partial Convolution Product for Functions and Distributions	105
1.3.9	Partial Convolution Product of Functions	111
<b>2</b>	<b>Integral Transforms of Distributions</b>	<b>113</b>
2.1	Fourier Series and Series of Distributions	113
2.1.1	Sequences and Series of Distributions	113
2.1.2	Expansion of Distributions into Fourier Series	116
2.1.3	Expansion of Singular Distributions into Fourier Series	128
2.2	Fourier Transforms of Functions and Distributions	129
2.2.1	Fourier Transforms of Functions	129
2.2.2	Fourier Transform and the Convolution Product	131
2.2.3	Partial Fourier Transform of Functions	132
2.2.4	Fourier Transform of Distributions from the Spaces $\mathcal{S}'$ and $\mathcal{D}'(\mathbb{R}^n)$	133
2.2.4.1	Properties of the Fourier Transform	136
2.2.4.2	Fourier Transform of the Distributions from the Space $\mathcal{D}'(\mathbb{R}^n)$	139
2.2.4.3	Fourier Transform and the Partial Convolution Product	144
2.3	Laplace Transforms of Functions and Distributions	145
2.3.1	Laplace Transforms of Functions	146
2.3.2	Laplace Transforms of Distributions	149
<b>3</b>	<b>Variational Calculus and Differential Equations in Distributions</b>	<b>151</b>
3.1	Variational Calculus in Distributions	151
3.1.1	Equations of the Euler–Poisson Type	158
3.2	Ordinary Differential Equations	160
3.3	Convolution Equations	166
3.3.1	Convolution Algebras	166
3.3.2	Convolution Algebra $\mathcal{D}'_+$ : Convolution Equations in $\mathcal{D}'_+$	170
3.4	The Cauchy Problem for Linear Differential Equations with Constant Coefficients	174
3.5	Partial Differential Equations: Fundamental Solutions and Solving the Cauchy Problem	177
3.5.1	Fundamental Solution for the Longitudinal Vibrations of Viscoelastic Bars of Maxwell Type	180
3.6	Wave Equation and the Solution of the Cauchy Problem	184
3.7	Heat Equation and Cauchy Problem Solution	187
3.8	Poisson Equation: Fundamental Solutions	189
3.9	Green's Functions: Methods of Calculation	190
3.9.1	Heat Conduction Equation	190
3.9.1.1	Generalized Poisson Equation	194
3.9.2	Green's Function for the Vibrating String	197
<b>4</b>	<b>Representation in Distributions of Mechanical and Physical Quantities</b>	<b>201</b>
4.1	Representation of Concentrated Forces	201
4.2	Representation of Concentrated Moments	206
4.2.1	Concentrate Moment of Linear Dipole Type	208

4.2.2	Rotational Concentrated Moment (Center of Rotation)	210
4.2.3	Concentrated Moment of Plane Dipole Type (Center of Dilatation or Contraction)	212
4.3	Representation in Distributions of the Shear Forces and the Bending Moments	213
4.3.1	Concentrated Force of Magnitude $P$ Applied at the Point $c \in [a, b]$	217
4.3.2	Concentrated Moment of Magnitude $m$ Applied at the Point $c \in [a, b]$	217
4.3.3	Distributed Forces of Intensity $q \in L^1_{\text{loc}}([a, b])$	218
4.4	Representation by Distributions of the Moments of a Material System	220
4.5	Representation in Distributions of Electrical Quantities	225
4.5.1	Volume and Surface Potential of the Electrostatic Field	225
4.5.2	Electrostatic Field	228
4.5.3	Electric Potential of Single and Double Layers	232
4.6	Operational Form of the Constitutive Law of One-Dimensional Viscoelastic Solids	235
<b>5</b>	<b>Applications of the Distribution Theory in Mechanics</b>	<b>241</b>
5.1	Newtonian Model of Mechanics	241
5.2	The Motion of a Heavy Material Point in Air	243
5.3	Linear Oscillator	246
5.3.1	The Cauchy Problem and the Phenomenon of Resonance	246
5.4	Two-Point Problem	249
5.5	Bending of the Straight Bars	250
<b>6</b>	<b>Applications of the Distribution Theory to the Mechanics of the Linear Elastic Bodies</b>	<b>253</b>
6.1	The Mathematical Model of the Linear Elastic Body	253
6.2	Equations of the Elasticity Theory	256
6.3	Generalized Solution in $\mathcal{D}'(\mathbb{R}^2)$ Regarding the Plane Elastic Problems	258
6.4	Generalized Solution in $\mathcal{D}'(\mathbb{R})$ of the Static Problem of the Elastic Half-Plane	264
6.5	Generalized Solution, in Displacements, for the Static Problem of the Elastic Space	268
<b>7</b>	<b>Applications of the Distribution Theory to Linear Viscoelastic Bodies</b>	<b>273</b>
7.1	The Mathematical Model of a Linear Viscoelastic Solid	273
7.2	Models of One-Dimensional Viscoelastic Solids	275
7.3	Viscoelasticity Theory Equations: Correspondence Principle	281
7.3.1	Viscoelasticity Theory Equations	281
7.3.2	Correspondence Principle	283
<b>8</b>	<b>Applications of the Distribution Theory in Electrical Engineering</b>	<b>285</b>
8.1	Study of the RLC Circuit: Cauchy Problem	285
8.2	Coupled Oscillating Circuit: Cauchy Problem	290

8.3	Admittance and Impedance of the RLC Circuit	294
8.4	Quadrupoles	295
<b>9</b>	<b>Applications of the Distribution Theory in the Study of Elastic Bars</b>	<b>301</b>
9.1	Longitudinal Vibrations of Elastic Bars	301
9.1.1	Equations of Motion Expressed in Displacements and in Stresses: Formulation of the Problems with Boundary–Initial Conditions	301
9.1.2	Forced Longitudinal Vibrations of a Bar with Boundary Conditions Expressed in Displacements	303
9.1.3	Forced Vibrations of a Bar with Boundary Conditions Expressed in Stresses	306
9.2	Transverse Vibrations of Elastic Bars	308
9.2.1	Differential Equation in Distributions of Transverse Vibrations of Elastic Bars	308
9.2.2	Free Vibrations of an Infinite Bar	311
9.2.3	Forced Transverse Vibrations of the Bars	312
9.2.4	Bending of Elastic Bars on Elastic Foundation	315
9.3	Torsional Vibration of the Elastic Bars	331
9.3.1	Differential Equation of Torsional Vibrations of the Elastic Bars with Circular Cross-Section	331
9.3.2	The Analogy between Longitudinal Vibrations and Torsional Vibrations of Elastic Bars	335
9.3.3	Torsional Vibration of Free Bars Embedded at One End and Free at the Other End	336
9.3.4	Forced Torsional Vibrations of a Bar Embedded at the Ends	338
<b>10</b>	<b>Applications of the Distribution Theory in the Study of Viscoelastic Bars</b>	<b>343</b>
10.1	The Equations of the Longitudinal Vibrations of the Viscoelastic Bars in the Distributions Space $\mathcal{D}'_+$	343
10.2	Longitudinal Vibrations of Maxwell Type Viscoelastic Bars: Solution in the Distributions Space $\mathcal{D}'_+$	345
10.3	Steady-State Longitudinal Vibrations for the Maxwell Bar	347
10.4	Quasi-Static Problems of Viscoelastic Bars	349
10.4.1	Bending of the Viscoelastic Bars	350
10.4.2	Bending of a Viscoelastic Bar of Kelvin–Voigt Type	352
10.4.3	Bending of a Viscoelastic Bar of Maxwell Type	352
10.5	Torsional Vibrations Equation of Viscoelastic Bars in the Distributions Space $\mathcal{D}'_+$	354
10.6	Transverse Vibrations of Viscoelastic Bars on Viscoelastic Foundation	357
10.6.1	The Generalized Equation in Distributions Space $\mathcal{D}'(\mathbb{R}^2)$ of the Transverse Vibrations of Viscoelastic Bars on Viscoelastic Foundation	357
10.6.2	Generalized Cauchy Problem Solution for Transverse Vibrations of the Elastic Bars on Kelvin–Voigt Type Viscoelastic Foundation	359

10.6.2.1	Particular Cases	363
<b>11</b>	<b>Applications of the Distribution Theory in Physics</b>	<b>365</b>
11.1	Applications of the Distribution Theory in Acoustics	365
11.1.1	Doppler Effect for a One-Dimensional Sound Source	365
11.1.2	Doppler Effect in the Presence of Wind	367
11.2	Applications of the Distribution Theory in Optics	371
11.2.1	The Phenomenon of Diffraction at Infinity	371
11.2.2	Diffraction of Fresnel Type	374
	<b>References</b>	<b>377</b>
