Preface *XI*

List of Contributors *XIII*

1	Introduction	<i>1</i>
	<i>Oleg G. Okhotnikov</i>	
	References	<i>4</i>
2	High-Power Fiber Lasers and Amplifiers: Fundamentals and Enabling Technologies to Enter the Upper Limits	<i>7</i>
	<i>Thomas Schreiber, Ramona Eberhardt, Jens Limpert, and Andreas Tünnermann</i>	
2.1	Introduction	<i>7</i>
2.2	High-Power Fiber Design	<i>8</i>
2.2.1	Double Clad Fiber Design	<i>8</i>
2.2.2	Large Core Design in Special Fibers	<i>11</i>
2.2.2.1	Motivation	<i>11</i>
2.2.2.2	Core Design in Photonic Crystal Fibers	<i>12</i>
2.2.3	Pump Core Design	<i>15</i>
2.2.4	Polarization Control	<i>16</i>
2.3	Theoretical Description and Nonlinear Effects in Laser Fibers	<i>19</i>
2.3.1	Propagation and Rate Equation Description	<i>19</i>
2.3.2	Thermo-optical Effects	<i>22</i>
2.3.3	Inelastic Scattering	<i>25</i>
2.3.4	Self-Phase Modulation	<i>27</i>
2.3.5	Mode Instabilities	<i>27</i>
2.4	Fiber Components for High-Power Fiber Lasers	<i>31</i>
2.4.1	Fiber Preparation	<i>31</i>
2.4.2	Endcaps	<i>33</i>
2.4.3	Pump Coupler	<i>34</i>
2.4.4	Mode-Stripper	<i>37</i>
2.5	High-Power Experiments	<i>37</i>
2.5.1	Narrow Linewidth CW Amplification	<i>37</i>
2.5.1.1	Narrow Linewidth Amplification of a Broadened Single-Frequency Diode Laser	<i>38</i>

2.5.1.2	Narrow Linewidth Amplified Spontaneous Emission Source	39
2.5.1.3	SBS Suppression Capabilities of the Narrow Linewidth ASE Source	42
2.5.2	Tandem Pumping	43
2.5.3	Beam Combining Methods	47
2.5.3.1	High Average Power CW Spectral Beam Combining	49
2.5.3.2	Pulsed SBC	52
2.6	Summary	55
	References	55
3	Supercontinuum Sources Based on Photonic Crystal Fiber	63
	<i>Sebastian Stark, John C. Travers, Nicolas Y. Joly, and Philip St. J. Russell</i>	
3.1	Introduction and Brief History	63
3.1.1	Outline of this Chapter	64
3.2	Photonic Crystal Fibers and Tapers	64
3.2.1	Calculating PCF Properties	65
3.2.2	Nonlinearity in PCF	66
3.2.3	Dispersion in PCF	69
3.3	Modeling Nonlinear Pulse Propagation in Optical Fiber	71
3.3.1	Unidirectional Field Equation	71
3.3.2	Envelope Equations	73
3.4	Ultrafast Pumped Supercontinuum Sources	74
3.4.1	Regimes of Supercontinuum Generation	74
3.4.2	Initial Dynamics and Solitons	77
3.4.3	Dispersive-Wave Generation	78
3.4.4	Intrapulse Raman Scattering	79
3.4.5	Tailoring the Shape of the SC – Ways of Shaping	81
3.4.5.1	Power Dependence	81
3.4.5.2	Wavelength Tuning	82
3.4.6	Multiple ZDWs	82
3.4.6.1	Three ZDWs	84
3.4.7	Taper Transitions	85
3.4.7.1	Soliton Dynamics in Axially Varying Fiber	86
3.4.7.2	Intrapulse FWM	86
3.4.7.3	Soliton Blue Shift	87
3.4.8	Extreme SCG	88
3.5	Conclusion	89
	References	89
4	Dissipative Soliton Fiber Lasers	97
	<i>William H. Renninger and Frank W. Wise</i>	
4.1	Introduction	97
4.2	Theory: Analytic Approach	99
4.2.1	Theory	99
4.2.2	Experimental Results	103

4.3	Theory: Simulations	105
4.3.1	Temporal Evolution	105
4.3.2	Variation of Laser Parameters	107
4.3.2.1	Nonlinear Phase Shifts	107
4.3.2.2	Spectral Filter Bandwidth	109
4.3.2.3	Group-Velocity Dispersion	109
4.3.2.4	Summary of the Effects of Laser Parameters	109
4.3.2.5	Design Guidelines	110
4.3.3	Experimental Confirmation	112
4.4	Physical Limits	114
4.4.1	Area Theorem	114
4.4.2	Pulse Energy	117
4.4.3	Pulse Duration	119
4.5	Practical Extensions	120
4.5.1	Core-Size Scaling	120
4.5.1.1	Double-Clad Fiber	121
4.5.1.2	Photonic Crystal Fiber	122
4.5.1.3	Chirally-Coupled Core Fiber	124
4.5.2	Environmental Stability	125
4.6	Giant-Chirp Oscillators	127
4.7	Summary	130
	References	130
5	Modeling and Technologies of Ultrafast Fiber Lasers	135
	<i>Brandon G. Bale, Oleg G. Okhitnikov, and Sergei K. Turitsyn</i>	
5.1	Overview of Short Pulse Fiber Lasers	135
5.1.1	Introduction	135
5.1.2	Gain Fiber	136
5.1.3	All-Fiber Methods for Dispersion Control	137
5.1.4	Advanced Saturable Absorbers	139
5.1.4.1	Quantum-Confined Semiconductor Absorbers	139
5.1.4.2	Carbon-Based Absorbers	140
5.2	Modeling of Ultrafast Fiber Lasers	142
5.2.1	Numerical Modeling of Ultrashort Fiber Lasers	143
5.2.2	Classification of Pulsed Fiber Lasers	146
5.2.3	Simplified Modeling Approach	149
5.2.4	Numerical Optimization of Laser Systems	154
5.3	Implementation and Control of Advanced Components	157
5.3.1	SESAM Engineering and Control	157
5.3.2	Example of Dispersion Management in Mode-Locked Fiber Lasers Based on Chirped Fiber Bragg Gratings	161
5.3.2.1	Dispersion Management Using CFBG in a Ytterbium-Doped Mode-Locked Fiber Laser	161
5.3.2.2	Dispersion Management Using CFBG in a Thulium/Holmium-Doped Mode-Locked Fiber Laser	163

5.3.3	Examples of Dispersion Management in Mode-Locked Fiber Lasers Based on Photonic Bandgap Fibers	164
5.4	Conclusions and Future Outlook	168
	References	169
6	Tapered Fiber Lasers and Amplifiers	177
	<i>Valery Filippov, Juho Kerttula, and Oleg G. Okhotnikov</i>	
6.1	Introduction	177
6.2	Theoretical Model and Experimental Results	178
6.2.1	Ray Optic Model of an Active Tapered Fiber	178
6.2.2	Parameters of Active Tapered Fibers and Their Optimization	183
6.2.2.1	Tapering Ratio	184
6.2.2.2	Longitudinal Shape of T-DCF Profile	187
6.2.2.3	Shape of the Cladding, Core–Cladding Ratio, and Dopant Concentration Profile	191
6.2.3	Comparison of Lasers with Regular and Tapered Fibers: Theoretical Model	192
6.2.3.1	Slope Efficiency, Pump Absorption, and Power Distribution	192
6.2.3.2	Contrast and Beam Quality	198
6.2.3.3	Launching Efficiency	203
6.2.4	Experiment	204
6.2.4.1	Pump Launching and Absorption	205
6.2.4.2	Pump Conversion Efficiency	206
6.2.4.3	Self-Pulsing Threshold	207
6.2.4.4	Mode-Coupling Measurements	210
6.2.4.5	Beam Quality	213
6.3	Lasers and Amplifiers with Active Tapered Fibers	214
6.3.1	High-Power Fiber Laser	214
6.3.2	Actively Q-Switched Tapered Fiber Laser	217
6.3.3	High Power, High Gain CW Amplifier	222
6.3.4	Narrow Bandwidth Amplifier	226
6.3.5	Short Pulse Amplifier	228
6.4	Summary	228
	References	229
7	Fiber Lasers that Bridge the Shortwave to Midwave Regions of the Infrared Spectrum	233
	<i>Stuart D. Jackson and David G. Lancaster</i>	
7.1	Introduction	233
7.2	Survey of the Power and Efficiency of Long-Wavelength Fiber Lasers	235
7.3	Shortwave Infrared Fiber Lasers Employing Silicate Glass	237
7.3.1	Er ³⁺ -Doped Silicate Glass Fiber Lasers	238
7.3.2	Tm ³⁺ -Doped Silicate Glass Fiber Lasers	239
7.3.3	Ho ³⁺ -Doped Silicate Glass Fiber Lasers	242

7.4	Infrared Fiber Fabrication	243
7.5	Shortwave and Midwave Infrared Fiber Lasers Employing Fluoride Glass	245
7.5.1	Shortwave Infrared Fiber Lasers Employing Fluoride Glass	246
7.5.2	Er ³⁺ -Doped Fluoride Glass Fiber Lasers	247
7.5.3	Ho ³⁺ -Doped Fluoride Glass Fiber Lasers	250
7.5.4	Dy ³⁺ -Doped Fluoride Glass Fiber Lasers	251
7.6	Exotic Glasses for Fiber Lasers	252
7.6.1	Chalcogenide Fiber Lasers: Not There Yet	254
7.6.2	Germanate Fiber Lasers	255
7.6.3	Tellurite Fiber Lasers	257
7.7	Conclusions	259
	References	260
8	Outlook	269
	<i>Oleg G. Okhotnikov</i>	
Index		271
