

Contents

1 Basic Physics	1
1.1 Fusion	1
1.2 Plasma	7
1.3 Coulomb Collisions	10
1.4 Electromagnetic Theory	17
2 Motion of Charged Particles	23
2.1 Gyromotion and Drifts	23
2.1.1 Gyromotion	23
2.1.2 $E \times B$ Drift	26
2.1.3 Grad- B Drift	27
2.1.4 Polarization Drift	29
2.1.5 Curvature Drift	30
2.2 Constants of the Motion	33
2.2.1 Magnetic Moment	33
2.2.2 Second Adiabatic Invariant*	34
2.2.3 Canonical Angular Momentum	36
2.3 Diamagnetism*	38
3 Magnetic Confinement	43
3.1 Confinement in Mirror Fields	43
3.1.1 Simple Mirror	43
3.1.2 Tandem Mirrors*	48
3.2 Closed Toroidal Confinement Systems	51
3.2.1 Confinement	51
3.2.2 Flux Surfaces	55
3.2.3 Trapped Particles	57
3.2.4 Transport Losses	61
4 Kinetic Theory	67
4.1 Boltzmann and Vlasov Equations	68
4.2 Drift Kinetic Approximation	68
4.3 Fokker–Planck Theory of Collisions	71
4.4 Plasma Resistivity	78
4.5 Coulomb Collisional Energy Transfer	80
4.6 Krook Collision Operators*	84

5 Fluid Theory	87
5.1 Moments Equations	87
5.2 One-Fluid Model	91
5.3 Magnetohydrodynamic Model	95
5.4 Anisotropic Pressure Tensor Model*	98
5.5 Strong Field, Transport Time Scale Ordering	100
6 Plasma Equilibria	105
6.1 General Properties	105
6.2 Axisymmetric Toroidal Equilibria	107
6.3 Large Aspect Ratio Tokamak Equilibria	113
6.4 Safety Factor	119
6.5 Shafranov Shift*	122
6.6 Beta*	125
6.7 Magnetic Field Diffusion and Flux Surface Evolution*	127
6.8 Anisotropic Pressure Equilibria*	130
6.9 Elongated Equilibria*	132
6.9.1 Geometry	132
6.9.2 Flux surface average	134
6.9.3 Equivalent toroidal models	134
6.9.4 Interpretation of thermal diffusivities from measured temperature gradients	136
6.9.5 Prediction of poloidal distribution of conductive heat flux	137
6.9.6 Mapping radial gradients to different poloidal locations	138
7 Waves	141
7.1 Waves in an Unmagnetized Plasma	141
7.1.1 Electromagnetic Waves	141
7.1.2 Ion Sound Waves	143
7.2 Waves in a Uniformly Magnetized Plasma	144
7.2.1 Electromagnetic Waves	144
7.2.2 Shear Alfvén Wave	147
7.3 Langmuir Waves and Landau Damping	149
7.4 Vlasov Theory of Plasma Waves*	152
7.5 Electrostatic Waves*	158
8 Instabilities	165
8.1 Hydromagnetic Instabilities	168
8.1.1 MHD Theory	169
8.1.2 Chew–Goldberger–Low Theory	170
8.1.3 Guiding Center Theory	172
8.2 Energy Principle	175
8.3 Pinch and Kink Instabilities	179
8.4 Interchange (Flute) Instabilities	183

8.5	Ballooning Instabilities	189
8.6	Drift Wave Instabilities	193
8.7	Resistive Tearing Instabilities*	196
8.7.1	Slab Model	196
8.7.2	MHD Regions	197
8.7.3	Resistive Layer	199
8.7.4	Magnetic Islands	200
8.8	Kinetic Instabilities*	202
8.8.1	Electrostatic Instabilities	202
8.8.2	Collisionless Drift Waves	203
8.8.3	Electron Temperature Gradient Instabilities	205
8.8.4	Ion Temperature Gradient Instabilities	206
8.8.5	Loss–Cone and Drift–Cone Instabilities	207
8.9	Sawtooth Oscillations*	211
9	Neoclassical Transport	215
9.1	Collisional Transport Mechanisms	215
9.1.1	Particle Fluxes	215
9.1.2	Heat Fluxes	217
9.1.3	Momentum Fluxes	218
9.1.4	Friction Force	220
9.1.5	Thermal Force	220
9.2	Classical Transport	222
9.3	Neoclassical Transport – Toroidal Effects in Fluid Theory	225
9.4	Multifluid Transport Formalism*	231
9.5	Closure of Fluid Transport Equations*	234
9.5.1	Kinetic Equations for Ion–Electron Plasma	234
9.5.2	Transport Parameters	238
9.6	Neoclassical Transport – Trapped Particles	241
9.7	Extended Neoclassical Transport – Fluid Theory*	247
9.7.1	Radial Electric Field	248
9.7.2	Toroidal Rotation	249
9.7.3	Transport Fluxes	249
9.8	Electrical Currents	251
9.8.1	Bootstrap Current	251
9.8.2	Total Current	252
9.9	Orbit Distortion*	253
9.9.1	Toroidal Electric Field – Ware Pinch	253
9.9.2	Potato Orbits	254
9.9.3	Orbit Squeezing	255
9.10	Neoclassical Ion Thermal Diffusivity	256
9.11	Paleoclassical Electron Thermal Diffusivity	258
9.12	Transport in a Partially Ionized Gas*	259

10 Plasma Rotation*	263
10.1 Neoclassical Viscosity	263
10.1.1 Rate-of-Strain Tensor in Toroidal Geometry	263
10.1.2 Viscous Stress Tensor	264
10.1.3 Toroidal Viscous Force	265
10.1.4 Parallel Viscous Force	269
10.1.5 Neoclassical Viscosity Coefficients	270
10.2 Rotation Calculations	272
10.2.1 Poloidal Rotation and Density Asymmetries	272
10.2.2 Shaing-Sigmar-Stacey Parallel Viscosity Model	275
10.2.3 Stacey-Sigmar Poloidal Rotation Model	276
10.2.4 Radial Electric Field and Toroidal Rotation Velocities	280
10.3 Momentum Confinement Times	281
10.3.1 Theoretical	281
10.3.2 Experimental	282
10.4 Rotation and Transport in Elongated Geometry	283
10.4.1 Flux surface coordinate system	283
10.4.2 Flux surface average	285
10.4.3 Differential Operators in Generalized Geometry	285
10.4.4 Fluid Equations in Miller Elongated Flux Surface Coordinates	286
11 Turbulent Transport	293
11.1 Electrostatic Drift Waves	293
11.1.1 General	293
11.1.2 Ion Temperature Gradient Drift Waves	296
11.1.3 Quasilinear Transport Analysis	296
11.1.4 Saturated Fluctuation Levels	298
11.2 Magnetic Fluctuations	299
11.3 Wave–Wave Interactions*	301
11.3.1 Mode Coupling	301
11.3.2 Direct Interaction Approximation	302
11.4 Drift Wave Eigenmodes*	304
11.5 Microinstability thermal diffusivity models*	306
11.5.1 Ion transport	307
11.5.2 Electron transport	312
11.6 Gyrokinetic and Gyrofluid Theory*	315
11.6.1 Gyrokinetic Theory of Turbulent Transport	316
11.6.2 Gyrofluid Theory of Turbulent Transport	318
11.7 Zonal Flows*	321
12 Heating and Current Drive	323
12.1 Inductive	323
12.2 Adiabatic Compression*	326
12.3 Fast Ions	329

12.3.1	Neutral Beam Injection	329
12.3.2	Fast Ion Energy Loss	331
12.3.3	Fast Ion Distribution*	334
12.3.4	Neutral Beam Current Drive	336
12.3.5	Toroidal Alfvén Instabilities	337
12.4	Electromagnetic Waves	339
12.4.1	Wave Propagation	339
12.4.2	Wave Heating Physics	342
12.4.3	Ion Cyclotron Resonance Heating	346
12.4.4	Lower Hybrid Resonance Heating	347
12.4.5	Electron Cyclotron Resonance Heating	348
12.4.6	Current Drive	349
13	Plasma–Material Interaction	355
13.1	Sheath	355
13.2	Recycling	358
13.3	Atomic and Molecular Processes	359
13.4	Penetration of Recycling Neutrals	364
13.5	Sputtering	365
13.6	Impurity Radiation	367
14	Divertors	373
14.1	Configuration, Nomenclature and Physical Processes	373
14.2	Simple Divertor Model	376
14.2.1	Strip Geometry	376
14.2.2	Radial Transport and Widths	376
14.2.3	Parallel Transport	378
14.2.4	Solution of Plasma Equations	379
14.2.5	Two-Point Model	380
14.3	Divertor Operating Regimes*	382
14.3.1	Sheath-Limited Regime	382
14.3.2	Detached Regime	383
14.3.3	High Recycling Regime	383
14.3.4	Parameter Scaling	384
14.3.5	Experimental Results	385
14.4	Impurity Retention	385
14.5	Thermal Instability*	388
14.6	2D Fluid Plasma Calculation*	391
14.7	Drifts	393
14.7.1	Basic Drifts in the SOL and Divertor	393
14.7.2	Poloidal and Radial $\mathbf{E} \times \mathbf{B}$ Drifts	394
14.8	Thermoelectric Currents	396
14.8.1	Simple Current Model	396
14.8.2	Relaxation of Simplifying Assumptions	398

14.9	Detachment	400
14.10	Effect of Drifts on Divertor and SOL Plasma Properties*	402
14.10.1	Geometric Model	402
14.10.2	Radial Transport	403
14.10.3	Temperature, Density and Velocity Distributions	404
14.10.4	Electrostatic Potential	406
14.10.5	Parallel Current	407
14.10.6	Grad-B and Curvature Drifts	408
14.10.7	Solution for Currents and Potentials at Divertor Plates	410
14.10.8	$E \times B$ Drifts	411
14.10.9	Total Parallel Ion Flux	413
14.10.10	Impurities	413
14.10.11	Geometric Invariance	415
14.10.12	Model Problem Calculation: Effect of B_ϕ Direction on SOL-Divertor Parameters	416
14.11	Blob Transport*	422
15	Plasma Edge	425
15.1	H-Mode Edge Plasma	425
15.2	Transport in the Plasma Edge	426
15.2.1	Fluid Theory	426
15.2.2	Multi-Fluid Theory*	430
15.2.3	Torque Representation*	431
15.2.4	Kinetic Corrections for Non-Diffusive Ion Transport	433
15.3	Differences Between L-Mode and H-Mode Plasma Edges	439
15.4	Effect of Recycling Neutrals	443
15.5	$E \times B$ Shear Stabilization of Turbulence	444
15.5.1	$E \times B$ Shear Stabilization Physics	445
15.5.2	Comparison with Experiment	447
15.5.3	Possible “Trigger” Mechanism for the L–H Transition	448
15.6	Thermal Instabilities	449
15.6.1	Temperature Perturbations in the Plasma Edge	449
15.6.2	Coupled Two-Dimensional Density–Velocity–Temperature Perturbations*	453
15.6.3	Spontaneous Edge Pressure Pedestal Formation	458
15.7	Poloidal Velocity Spin-Up*	461
15.7.1	Neoclassical Spin-Up	463
15.7.2	Fluid Momentum Balance Calculation of Poloidal Velocity Spin-Up	463
15.7.3	Poloidal Velocity Spin-Up Due to Poloidal Asymmetries	464
15.7.4	Bifurcation of the Poloidal Velocity Spin-Up	466
15.8	ELM Stability Limits on Edge Pressure Gradients	467
15.8.1	MHD Instability Theory of Peeling Modes*	468

15.8.2	MHD Instability Theory of Coupled Ballooning-Peeling Modes*	470
15.8.3	MHD Instability Analysis of ELMs	472
15.9	MARFEs	476
15.10	Radiative Mantle	480
15.11	Edge Operation Boundaries	482
16	Neutral Particle Transport	485
16.1	Fundamentals*	485
16.1.1	1D Boltzmann Transport Equation	485
16.1.2	Legendre Polynomials	486
16.1.3	Charge Exchange Model	487
16.1.4	Elastic Scattering Model	488
16.1.5	Recombination Model	491
16.1.6	First Collision Source	491
16.2	P_N Transport and Diffusion Theory*	493
16.2.1	P_N Equations	493
16.2.2	Extended Diffusion Theories	496
16.3	Multidimensional Neutral Transport*	500
16.3.1	Formulation of Transport Equation	500
16.3.2	Boundary Conditions	502
16.3.3	Scalar Flux and Current	502
16.3.4	Partial Currents	504
16.4	Integral Transport Theory*	504
16.4.1	Isotropic Point Source	505
16.4.2	Isotropic Plane Source	506
16.4.3	Anisotropic Plane Source	507
16.4.4	Transmission Probabilities	509
16.4.5	Escape Probabilities	509
16.4.6	Inclusion of Isotropic Scattering and Charge Exchange	510
16.4.7	Distributed Volumetric Sources in Arbitrary Geometry	511
16.4.8	Flux from a Line Isotropic Source	511
16.4.9	Bickley Functions	512
16.4.10	Probability of Traveling a Distance t from a Line, Isotropic Source without a Collision	513
16.5	Collision Probability Methods*	514
16.5.1	Reciprocity among Transmission and Collision Probabilities	514
16.5.2	Collision Probabilities for Slab Geometry	515
16.5.3	Collision Probabilities in Two-Dimensional Geometry	515
16.6	Interface Current Balance Methods	517
16.6.1	Formulation	517
16.6.2	Transmission and Escape Probabilities	517
16.6.3	2D Transmission/Escape Probabilities (TEP) Method	519
16.6.4	1D Slab Method	524

16.7	Extended Transmission-Escape Probabilities Method*	525
16.7.1	Basic TEP Method	525
16.7.2	Anisotropic Angular Fluxes	526
16.7.3	Extended Directional Escape Probabilities	528
16.7.4	Average Neutral Energy Approximation	531
16.8	Discrete Ordinates Methods*	533
16.8.1	\mathbf{P}_L and $\mathbf{D}-\mathbf{P}_L$ Ordinates	534
16.9	Monte Carlo Methods*	536
16.9.1	Probability Distribution Functions	537
16.9.2	Analog Simulation of Neutral Particle Transport	537
16.9.3	Statistical Estimation	539
16.10	Navier-Stokes Fluid Model*	541
16.11	Tokamak Plasma Refueling by Neutral Atom Recycling	542
17 Power Balance		549
17.1	Energy Confinement Time	549
17.1.1	Definition	549
17.1.2	Experimental Energy Confinement Times	550
17.1.3	Empirical Correlations	551
17.2	Radiation	554
17.2.1	Radiation Fields	554
17.2.2	Bremsstrahlung	556
17.2.3	Cyclotron Radiation	557
17.3	Impurities	559
17.4	Burning Plasma Dynamics	561
18 Operational Limits		565
18.1	Disruptions	565
18.1.1	Physics of Disruptions	565
18.1.2	Causes of Disruptions	567
18.2	Disruption Density Limit	567
18.2.1	Radial Temperature Instabilities	569
18.2.2	Spatial Averaging*	571
18.2.3	Coupled Radial Temperature–Density Instabilities*	573
18.3	Nondisruptive Density Limits	576
18.3.1	MARFEs	576
18.3.2	Confinement Degradation	577
18.3.3	Thermal Collapse of Divertor Plasma	580
18.4	Empirical Density Limit	581
18.5	MHD Instability Limits	581
18.5.1	β -Limits	581
18.5.2	Kink Mode Limits on $q(a)/q(0)$	584

19 Fusion Reactors and Neutron Sources	587
19.1 Plasma Physics and Engineering Constraints	587
19.1.1 Confinement	587
19.1.2 Density Limit	588
19.1.3 <i>Beta</i> Limit	589
19.1.4 Kink Stability Limit	590
19.1.5 Start-Up Inductive Volt-Seconds	590
19.1.6 Noninductive Current Drive	591
19.1.7 Bootstrap Current	592
19.1.8 Toroidal Field Magnets	592
19.1.9 Blanket and Shield	593
19.1.10 Plasma Facing Component Heat Fluxes	593
19.1.11 Radiation Damage to Plasma Facing Components	596
19.2 International Tokamak Program	597
19.3 Fusion Beyond ITER	600
19.4 Fusion-Fission Hybrids?	603
Appendices	
A Frequently Used Physical Constants	611
B Dimensions and Units	613
C Vector Calculus	617
D Curvilinear Coordinates	619
E Plasma Formulas	627
F Further Reading	629
G Attributions	633
Subject Index	641
