Contents

Preface *XI*
Acknowledgments *XIII*

1 Introduction *1*
1.1 Brief History *1*
1.2 What is Meant by a Coupled System? *2*
1.3 Scope *3*
1.4 Limitations of Scope *4*

2 Inherent Optical Properties (IOPs) *7*
2.1 General Definitions *7*
2.1.1 Absorption Coefficient and Volume Scattering Function *7*
2.1.2 Scattering Phase Function *8*
2.2 Examples of Scattering Phase Functions *11*
2.2.1 Rayleigh Scattering Phase Function *11*
2.2.2 Henyey–Greenstein Scattering Phase Function *11*
2.2.3 Fournier–Forand Scattering Phase Function *13*
2.2.4 The Petzold Scattering Phase Function *14*
2.3 Scattering Phase Matrix *14*
2.3.1 Stokes Vector Representation $\mathbf{I}_S = [I, Q, U, V]^T$ *16*
2.3.2 Stokes Vector Representation $\mathbf{I} = [I_{||}, I_{\perp}, U, V]^T$ *20*
2.3.3 Generalized Spherical Functions *22*
2.4 IOPs of a Polydispersion of Particles – Integration over the Size Distribution *24*
2.4.1 IOPs for a Mixture of Different Particle Types *25*
2.4.2 Treatment of Strongly Forward-Peaked Scattering *26*
2.4.3 Particle Size Distributions (PSDs) *28*
2.5 Scattering of an Electromagnetic Wave by Particles *29*
2.5.1 Summary of Electromagnetic Scattering *30*
2.5.2 Amplitude Scattering Matrix *31*
2.5.3 Scattering Matrix *32*
2.5.4 Extinction, Scattering, and Absorption *34*

2.6 Absorption and Scattering by Spherical Particles – Mie–Lorenz Theory *35*
2.7 Atmosphere IOPs *41*
2.7.1 Vertical Structure *41*
2.7.2 Gases in the Earth's Atmosphere *42*
2.7.3 Molecular IOPs *43*
2.7.4 IOPs of Suspended Particles in the Atmosphere *45*
2.7.5 Aerosol IOPs *45*
2.7.6 Cloud IOPs *47*
2.8 Snow and Ice IOPs *48*
2.8.1 General Approach *48*
2.8.2 Extension of Particle IOP Parameterization to Longer Wavelengths *50*
2.8.3 Impurities, Air Bubbles, Brine Pockets, and Snow *51*
2.9 Water IOPs *53*
2.9.1 Absorption and Scattering by Pure Water *53*
2.9.2 Absorption and Scattering by Water Impurities *54*
2.9.3 Bio-Optical Model Based on the Particle Size Distribution (PSD) *56*
2.10 Fresnel Reflectance and Transmittance at a Plane Interface Between Two Coupled Media *63*
2.10.1 Stokes Vector of Reflected Radiation *65*
2.10.2 Total Reflection *65*
2.10.3 Stokes Vector of Transmitted Radiation *67*
2.11 Surface Roughness Treatment *68*
2.11.1 Basic Definitions *68*
2.11.2 Reciprocity Relation and Kirchhoff's Law *70*
2.11.3 Specular Versus Lambertian and Non-Lambertian Reflection at the Lower Boundary *71*
2.11.4 Scattering, Emission, and Transmission by a Random Rough Surface – Kirchhoff Approximation *72*
2.11.4.1 Rough Dielectric Interface *72*
2.11.5 Slope Statistics for a Wind-Roughened Water Surface *76*
2.12 Land Surfaces *77*
2.12.1 Unpolarized Light *78*
2.12.2 Polarized Light *82*

3 Basic Radiative Transfer Theory *85*
3.1 Derivation of the Radiative Transfer Equation (RTE) *85*
3.1.1 RTE for Unpolarized Radiation *85*
3.1.2 RTE for Polarized Radiation *87*
3.2 Radiative Transfer of Unpolarized Radiation in Coupled Systems *88*
3.2.1 Isolation of Azimuth Dependence *89*
3.3 Radiative Transfer of Polarized Radiation in Coupled Systems *90*
3.3.1 Isolation of Azimuth Dependence *91*
3.4 Methods of Solution of the RTE *93*

3.4.1 Formal Solutions *94*
3.4.2 Single-Scattering Approximation *96*
3.4.3 Successive Order of Scattering (SOS) Method *100*
3.4.4 Discrete-Ordinate Method *102*
3.4.5 Doubling-Adding and Matrix Operator Methods *105*
3.4.6 Monte Carlo Method *109*
3.5 Calculation of Weighting Functions – Jacobians *110*
3.5.1 Linearized Radiative Transfer *110*
3.5.2 Neural Network Forward Models *112*

4 Forward Radiative Transfer Modeling *117*
4.1 Quadrature Rule – The *Double-Gauss* Method *117*
4.2 Discrete Ordinate Equations – Compact Matrix Formulation *120*
4.2.1 "Cosine" Solutions *120*
4.2.2 "Sine" Solutions *122*
4.3 Discrete-Ordinate Solutions *123*
4.3.1 Homogeneous Solution *123*
4.3.2 Vertically Inhomogeneous Media *128*
4.3.3 Particular Solution – Upper Slab *129*
4.3.4 Particular Solution – Lower Slab *133*
4.3.5 General Solution *134*
4.3.6 Boundary Conditions *135*

5 The Inverse Problem *137*
5.1 Probability and Rules for Consistent Reasoning *137*
5.2 Parameter Estimation *140*
5.2.1 Optimal Estimation, Error Bars and Confidence Intervals *140*
5.2.2 Problems with More Than One Unknown Parameter *147*
5.2.3 Approximations: Maximum Likelihood and Least Squares *157*
5.2.4 Error Propagation: Changing Variables *160*
5.3 Model Selection or Hypothesis Testing *163*
5.4 Assigning Probabilities *168*
5.4.1 Ignorance: Indifference, and Transformation Groups *168*
5.4.2 Testable Information: The Principle of Maximum Entropy *173*
5.5 Generic Formulation of the Inverse Problem *181*
5.6 Linear Inverse Problems *182*
5.6.1 Linear Problems without Measurement Errors *183*
5.6.2 Linear Problems with Measurement Errors *185*
5.7 Bayesian Approach to the Inverse Problem *186*
5.7.1 Optimal Solution for Linear Problems *189*
5.8 Ill Posedness or Ill Conditioning *191*
5.8.1 SVD Solutions and Resolution Kernels *192*
5.8.2 Twomey–Tikhonov Regularization – TT-Reg *197*
5.8.3 Implementation of the Twomey–Tikhonov Regularization *198*
5.9 Nonlinear Inverse Problems *200*

5.9.1 Gauss–Newton Solution of the Nonlinear Inverse Problem *201*
5.9.2 Levenberg–Marquardt Method *203*

6 Applications *205*
6.1 Principal Component (PC) Analysis *205*
6.1.1 Application to the O_2 A Band *206*
6.2 Simultaneous Retrieval of Total Ozone Column (TOC) Amount and Cloud Effects *207*
6.2.1 NILU-UV Versus OMI *209*
6.2.2 Atmospheric Radiative Transfer Model *210*
6.2.3 LUT Methodology *210*
6.2.4 Radial Basis Function Neural Network Methodology *210*
6.2.5 Training of the RBF-NN *211*
6.2.6 COD and TOC Values Inferred by the LUT and RBF-NN Methods *211*
6.2.7 TOC Inferred from NILU-UV (RBF-NN and LUT) and OMI *213*
6.2.8 Summary *214*
6.3 Coupled Atmosphere–Snow–Ice Systems *215*
6.3.1 Retrieval of Snow/Ice Parameters from Satellite Data *216*
6.3.2 Cloud Mask and Surface Classification *218*
6.3.2.1 Snow Sea Ice Cover and Surface Temperature *218*
6.3.3 Snow Impurity Concentration and Grain Size *219*
6.4 Coupled Atmosphere–Water Systems *225*
6.4.1 Comparisons of C-DISORT and C-MC Results *226*
6.4.2 Impact of Surface Roughness on Remotely Sensed Radiances *226*
6.4.3 The Directly Transmitted Radiance (DTR) Approach *228*
6.4.4 The Multiply Scattered Radiance (MSR) Approach *229*
6.4.5 Comparison of DTR and MSR *230*
6.5 Simultaneous Retrieval of Aerosol and Aquatic Parameters *232*
6.5.1 Atmospheric IOPs *233*
6.5.2 Aquatic IOPs *234*
6.5.3 Inverse Modeling *235*
6.6 Polarized RT in a Coupled Atmosphere–Ocean System *237*
6.6.1 C-VDISORT and C-PMC Versus Benchmark – Aerosol Layer – Reflection *239*
6.6.2 C-VDISORT and C-PMC Versus Benchmark – Aerosol Layer – Transmission *239*
6.6.3 C-VDISORT and C-PMC Versus Benchmark – Cloud Layer – Reflection *242*
6.6.4 C-VDISORT and C-PMC Versus Benchmark – Cloud Layer – Transmission *242*
6.6.5 C-VDISORT Versus C-PMC – Aerosol Particles – Coupled Case *245*

6.6.6 C-VDISORT Versus C-PMC – Aerosol/Cloud Particles – Coupled Case *245*
6.6.7 Summary *249*
6.7 What if MODIS Could Measure Polarization? *249*
6.7.1 Motivation *249*
6.7.2 Goals of the Study *250*
6.7.3 Study Design *250*
6.7.4 Forward Model *252*
6.7.5 Optimal estimation/Inverse model *252*
6.7.6 Results *254*
6.7.7 Concluding Remarks *260*

A Scattering of Electromagnetic Waves *263*
A.1 Absorption and Scattering by a Particle of Arbitrary Shape *264*
A.1.1 General Formulation *264*
A.1.2 Amplitude Scattering Matrix *265*
A.1.3 Scattering Matrix *266*
A.1.4 Extinction, Scattering, and Absorption *268*
A.2 Absorption and Scattering by a Sphere – Mie Theory *271*
A.2.1 Solutions of Vector Wave Equations in Spherical Polar Coordinates *272*
A.2.2 Expansion of Incident Plane Wave in Vector Spherical Harmonics *275*
A.2.3 Internal and Scattered Fields *277*

B Spectral Sampling Strategies *287*
B.1 The MODTRAN Band Model *289*
B.2 The *k*-Distribution Method *290*
B.3 Spectral Mapping Methods *293*
B.4 Principal Component (PC) Analysis *294*
B.5 Optimal Spectral Sampling *294*

C Rough Surface Scattering and Transmission *297*
C.1 Scattering and Emission by Random Rough Surfaces *297*
C.1.1 Tangent Plane Approximation *298*
C.1.2 Geometrical Optics Solution *300*
C.1.2.1 Stationary-Phase Method *301*

D Boundary Conditions *313*
D.1 The Combined Boundary Condition System *313*
D.2 Top of Upper Slab *315*
D.3 Layer Interface Conditions in the Upper Slab *317*
D.3.1 Interface Between the Two Slabs (Atmosphere–Water System) *319*
D.4 Layer Interface Conditions in the Lower Slab *325*
D.5 Bottom Boundary of Lower Slab *325*

D.5.1 Bottom Thermal Emission Term *327*
D.5.2 Direct Beam Term *327*
D.5.3 Bottom Diffuse Radiation *328*
D.5.4 Bottom Boundary Condition *329*
