Preface to the Third Edition VII

Sources of Information IX

- A From Abbe's principle to Azbel'–Kaner cyclotron resonance 1
- B From B92 protocol to Burstein–Moss shift 31
- C From C-AFM (conductive atomic force microscopy) to cyclotron resonance 61
- D From D'Alembert equation to Dzyaloshinskii–Moriya interaction 93
- E From (e,2e) reaction to Eyring equation 123
- F From Fabry–Pérot resonator to FWHM (full width at half maximum) 151
- G From gain-guided laser to gyromagnetic frequency 179
- H From habit plane to hyperelastic scattering 195
- I From IBID (ion-beam-induced deposition) to isotropy (of matter) 219
- J From Jahn–Teller effect to Joule's law of electric heating 229
- K From Kadowaki–Woods ratio to Kuhn–Thomas–Reiche sum rule 233
- L From lab-on-a-chip to Lyman series 249
- M From Mach–Zender interferometer to Murrell–Mottram potential 277
- N From NAA (neutron activation analysis) to Nyquist–Shannon sampling theorem 315
- O From octet rule to oxide 335

Contents

- P** From PALM (photoactivable localization microscopy) to pyrrole 343
- Q** From Q -control to qubit 383
- R** From Rabi flopping to Rydberg gas 405
- S** From Sabatier principle to synergetics 423
- T** From Talbot's law to type II superconductors 503
- U** From ultraviolet-assisted nanoimprint lithography (UV-NIL) to Urbach rule 525
- V** From vacancy to von Neumann machine 531
- W** From Waidner–Burgess standard to Wyckoff notation 539
- X** From XMCD (X-ray magnetic circular dichroism) to XRD (X-ray diffraction) 551
- Y** From Yasukawa potential to Yukawa potential 555
- Z** From Zeeman effect to Zundel ion 557
- Appendix** 561
- A list and a presentation of Scientific Journals which contain the stem *Nano* in their title** 563
- Abbreviations for the scientific journals which appear as sources in the text** 585
- Appendix – main properties of intrinsic (or lightly doped) semiconductors** 591
