Contents

Preface *XV*
Acronyms *XVII*
List of Contributors *XXI*

Part One Coherent Combining with Active Phase Control *1*

1 Engineering of Coherently Combined, High-Power Laser Systems *3*
Gregory D. Goodno and Joshua E. Rothenberg
1.1 Introduction *3*
1.2 Coherent Beam Combining System Requirements *5*
1.3 Active Phase-Locking Controls *8*
1.3.1 Optical Heterodyne Detection *11*
1.3.2 Synchronous Multidither *13*
1.3.3 Hill Climbing *14*
1.4 Geometric Beam Combining *14*
1.4.1 Tiled Aperture Combiners *15*
1.4.2 Filled Aperture Combiners Using Diffractive Optical Elements *16*
1.4.2.1 Overview of DOE Combiners *17*
1.4.2.2 DOE Design and Fabrication *18*
1.4.2.3 DOE Thermal and Spectral Sensitivity *20*
1.5 High-Power Coherent Beam Combining Demonstrations *21*
1.5.1 Coherent Beam Combining of Zigzag Slab Lasers *22*
1.5.2 Coherent Beam Combining of Fiber Lasers *26*
1.5.2.1 Phase Locking of Nonlinear Fiber Amplifiers *26*
1.5.2.2 Path Length Matching with Broad Linewidths *30*
1.5.2.3 Diffractive CBC of High-Power Fibers *31*
1.5.2.4 CBC of Tm Fibers at 2 μm *37*
1.6 Conclusion *39*
Acknowledgments *40*
References *40*

2 Coherent Beam Combining of Fiber Amplifiers via LOCSET *45*
Angel Flores, Benjamin Pulford, Craig Robin, Chunte A. Lu, and Thomas M. Shay
2.1 Introduction *45*
2.1.1 Beam Combination Architectures *46*
2.1.2 Active and Passive Coherent Beam Combining *47*
2.2 Locking of Optical Coherence by Single-Detector Electronic-Frequency Tagging *48*
2.2.1 LOCSET Theory *49*
2.2.2 Self-Referenced LOCSET *50*
2.2.2.1 Photocurrent Signal *50*
2.2.2.2 LOCSET Demodulation *53*
2.2.3 Self-Synchronous LOCSET *55*
2.3 LOCSET Phase Error and Channel Scalability *55*
2.3.1 LOCSET Beam Combining and Phase Error Analysis *55*
2.3.2 In-Phase and Quadrature-Phase Error Analysis *56*
2.3.3 Two-Channel Beam Combining *58*
2.3.4 16-Channel Beam Combining *60*
2.3.5 32-Channel Beam Combining *62*
2.4 LOCSET High-Power Beam Combining *63*
2.4.1 Kilowatt-Scale Coherent Beam Combining of Silica Fiber Lasers *64*
2.4.2 Kilowatt-Scale Coherent Beam Combining of Photonic Crystal Fiber Amplifiers *67*
2.5 Conclusion *71*
References *71*

3 Kilowatt Coherent Beam Combining of High-Power Fiber Amplifiers Using Single-Frequency Dithering Techniques *75*
Zejin Liu, Pu Zhou, Xiaolin Wang, Yanxing Ma, and Xiaojun Xu
3.1 Introduction *75*
3.1.1 Brief History of Coherent Beam Combining *75*
3.1.2 Coherent Beam Combining: State of the Art *76*
3.1.3 Key Technologies for Coherent Beam Combining *77*
3.2 Single-Frequency Dithering Technique *78*
3.2.1 Theory of Single-Frequency Dithering Technique *78*
3.2.2 Kilowatt Coherent Beam Combining of High-Power Fiber Amplifiers Using Single-Frequency Dithering Technique *85*
3.2.3 Coherent Polarization Beam Combining of Four High-Power Fiber Amplifiers Using Single-Frequency Dithering Technique *88*
3.2.4 Target-in-the-Loop Coherent Beam Combination of Fiber Lasers Based on Single-Frequency Dithering Technique *91*
3.3 Sine–Cosine Single-Frequency Dithering Technique *94*
3.3.1 Theory of Sine–Cosine Single-Frequency Dithering Technique *94*

3.3.2 Coherent Beam Combining of Nine Beams Using Sine–Cosine Single-Frequency Dithering Technique *97*
3.4 Summary *99*
References *100*

4 Active Coherent Combination Using Hill Climbing-Based Algorithms for Fiber and Semiconductor Amplifiers *103*
Shawn Redmond, Kevin Creedon, Tso Y. Fan, Antonio Sanchez-Rubio, Charles Yu, and Joseph Donnelly
4.1 Introduction to Hill Climbing Control Algorithms for Active Phase Control *103*
4.1.1 Conventional SPGD-Based Control Algorithm for Active Phase Control *104*
4.1.2 Orthonormal Dither-Based Control Algorithm *106*
4.1.3 Multiple Detector-Based Control Algorithm *114*
4.2 Applications of Active Phase Control Using Hill Climbing Control Algorithms *117*
4.2.1 Semiconductor Amplifier Active Coherent Combination *117*
4.2.1.1 Introduction to SCOWA Semiconductor Waveguide and Phase Control *118*
4.2.1.2 Tiled Array Beam Combination *120*
4.2.1.3 Single-Beam Active Coherent Combination Using Diffractive Optical Elements *125*
4.2.2 Fiber Amplifier Active Coherent Combination *128*
4.2.2.1 Introduction to Fiber Amplifier Active Beam Combination Architectures *128*
4.2.2.2 Tiled Array Beam Combination *129*
4.2.2.3 Single-Beam Active Coherent Combination Using Diffractive Optical Elements *133*
4.3 Summary *134*
Disclaimer *134*
References *135*

5 Collective Techniques for Coherent Beam Combining of Fiber Amplifiers *137*
Arnaud Brignon, Jérome Bourderionnet, Cindy Bellanger, and Jérome Primot
5.1 Introduction *137*
5.2 The Tiled Arrangement *138*
5.2.1 Calculation of the Far-Field Intensity Pattern *139*
5.2.2 Influence of Design Parameters on the Combining Efficiency *141*
5.2.2.1 Impact of the Near Field Arrangement *141*
5.2.2.2 Impact of Collimation System Design and Errors *143*

5.2.2.3 Impact of Phase Error *145*
5.2.2.4 Impact of Power Dispersion *146*
5.2.3 Beam Steering *146*
5.3 Key Elements for Active Coherent Beam Combining of a Large Number of Fibers *147*
5.3.1 Collimated Fiber Array *148*
5.3.2 Collective Phase Measurement Technique *151*
5.3.2.1 Principle of the Measurement *152*
5.3.2.2 Implementation in the Experimental Setup *153*
5.3.2.3 Phase Retrieval Techniques *153*
5.3.3 Phase Modulators *155*
5.4 Beam Combining of 64 Fibers with Active Phase Control *156*
5.5 Beam Combining by Digital Holography *158*
5.5.1 Principle *159*
5.5.2 Experimental Demonstration *161*
5.6 Conclusion *163*
Acknowledgments *164*
References *164*

6 Coherent Beam Combining and Atmospheric Compensation with Adaptive Fiber Array Systems *167*
Mikhail Vorontsov, Thomas Weyrauch, Svetlana Lachinova, Thomas Ryan, Andrew Deck, Micah Gatz, Vladimir Paramonov, and Gary Carhart
6.1 Introduction *167*
6.2 Fiber Array Engineering *168*
6.3 Turbulence-Induced Phase Aberration Compensation with Fiber Array-Integrated Piston and Tip–Tilt Control *173*
6.4 Target Plane Phase Locking of a Coherent Fiber Array on an Unresolved Target *175*
6.4.1 Fiber Array Control System Engineering: Issues and Considerations *175*
6.4.2 SPGD-Based Coherent Beam Combining: Round-Trip Propagation Time Issue *176*
6.4.3 Coherent Beam Combining at an Unresolved Target over 7 km Distance *178*
6.5 Target Plane Phase Locking for Resolved Targets *182*
6.5.1 Speckle Metric Optimization-Based Phase Locking *183*
6.5.2 Speckle Metrics *184*
6.5.3 Experimental Evaluation of Speckle Metric-Based Phase Locking *186*
6.6 Conclusion *188*
Acknowledgments *189*
References *189*

7 Refractive Index Changes in Rare Earth-Doped Optical Fibers and Their Applications in All-Fiber Coherent Beam Combining *193*
Andrei Fotiadi, Oleg Antipov, Maxim Kuznetsov, and Patrice Mégret
7.1 Introduction *193*
7.2 Theoretical Description of the RIC Effect in Yb-Doped Optical Fibers *194*
7.2.1 Introduction: Thermal and Electronic RIC Mechanisms *194*
7.2.2 Description of the Spectroscopic Properties of Yb-Doped Optical Fibers *195*
7.2.3 Description of the Electronic RIC Mechanism *195*
7.2.4 Description of the Thermal RIC Mechanism *200*
7.2.5 Comparison of Electronic and Thermal Contributions to the Pump-Induced Phase Shift *201*
7.2.6 Phase Shifts in the Case of Periodic Pulse Pumping and in the Presence of Amplified Signal *203*
7.2.7 Conclusion *205*
7.3 Experimental Studies of the RIC Effect in Yb-Doped Optical Fibers *205*
7.3.1 Previous Observations of the RIC Effect in Laser Fibers *205*
7.3.2 Methodology of Pump/Signal-Induced RIC Measurements *206*
7.3.3 Characterization of RIC in Different Fiber Samples *207*
7.3.4 Phase Shifts Induced by Signal Pulses *210*
7.3.5 Evaluation of the Polarizability Difference *212*
7.3.6 Comparison of the RIC Effects in Aluminum and Phosphate Silicate Fibers *213*
7.3.7 Conclusion *215*
7.4 All-Fiber Coherent Combining through RIC Effect in Rare Earth-Doped Fibers *215*
7.4.1 Coherent Combining of Fiber Lasers: Alternative Techniques *215*
7.4.2 Operation Algorithm and Simulated Results *217*
7.4.3 Environment Noise in Optical System to be Compensated *222*
7.4.4 Combining of Two Er-Doped Amplifiers through the RIC Control in Yb-Doped Fibers *223*
7.4.5 Extension Algorithm for Combining of *N* Amplifiers *224*
7.4.6 Conclusion *226*
7.5 Conclusions and Recent Progress *226*
References *227*

8 Coherent Beam Combining of Pulsed Fiber Amplifiers in the Long-Pulse Regime (Nano- to Microseconds) *231*
Laurent Lombard, Julien L. Gouët, Pierre Bourdon, and Guillaume Canat
8.1 Introduction *231*
8.2 Beam Combining Techniques *234*

8.2.1 Filled and Tiled Apertures *235*
8.2.2 Locking Techniques *236*
8.2.2.1 Direct Phase Locking Techniques *236*
8.2.2.2 Indirect Phase Locking Techniques *237*
8.2.3 Requirements of Various Techniques *239*
8.2.3.1 Indirect Phase Locking Techniques *239*
8.2.3.2 Direct Phase Locking Techniques *240*
8.2.4 Case of Pulsed Laser *240*
8.3 Amplification of Optical Pulse in Active Fiber *243*
8.3.1 Approximations and Validity Domain of the Calculation *243*
8.3.2 Pulse Propagation in the Resonant Medium *244*
8.3.3 Practical Calculation of the Output Pulse Based on the CW Regime *245*
8.3.4 Pulse Shape Distortion *246*
8.3.5 Influence of the Amplified Spontaneous Emission *247*
8.4 Power Limitations in Pulsed Fiber Amplifiers *248*
8.4.1 Physical Principle of the Stimulated Brillouin Scattering *248*
8.4.2 SBS Gain *249*
8.4.3 SBS Threshold Input Power *250*
8.4.4 SBS Reduction *251*
8.4.5 Domain of SBS Predominance *251*
8.4.6 Physical Principle of the Stimulated Raman Scattering *252*
8.4.7 Maximum Peak Power Achievable *253*
8.5 Phase Noise and Distortion in Fiber Amplifiers *253*
8.5.1 Phase Noise Measurement *253*
8.5.2 In-Pulse Phase Shift Measurement *258*
8.5.3 In-Pulse Phase Shift Calculation *259*
8.5.3.1 Kerr-Induced Phase Shift *260*
8.5.3.2 Gain-Induced Phase Shift *262*
8.6 Experimental Setup and Results of Coherent Beam Combining of Pulsed Amplifiers Using a Signal Leak between the Pulses *266*
8.7 Alternative Techniques for Pulse Energy Scaling *269*
8.8 Conclusion *271*
References *272*

9 Coherent Beam Combining in the Femtosecond Regime *277*
Marc Hanna, Dimitrios N. Papadopoulos, Louis Daniault, Frédéric Druon, Patrick Georges, and Yoann Zaouter
9.1 Introduction *277*
9.2 General Aspects of Coherent Combining over Large Optical Bandwidths *278*
9.2.1 Description and Propagation of Femtosecond Pulses *278*
9.2.2 Coherent Combining over a Large Bandwidth *280*
9.2.3 Influence of Spectral Phase Mismatch on the Combining Efficiency *281*

9.2.4 Space–Time Effects *283*
9.3 Coherent Combining with Identical Spectra: Power/Energy Scaling *284*
9.3.1 Active Techniques *284*
9.3.1.1 Experimental Implementations *284*
9.3.1.2 Measurement of Spectral Phase Mismatch *287*
9.3.2 Passive Coherent Combining Techniques: Path-Sharing Network *290*
9.3.2.1 Principle *290*
9.3.2.2 Experimental Demonstrations *292*
9.4 Other Coherent Combining Concepts *295*
9.4.1 Temporal Multiplexing: Divided Pulse Amplification *295*
9.4.2 Passive Enhancement Cavities *296*
9.4.3 Coherent Combining with Disjoint Spectra: Ultrafast Pulse Synthesis *298*
9.5 Conclusion *299*
References *300*

Part Two Passive and Self-Organized Phase Locking *303*

10 Modal Theory of Coupled Resonators for External Cavity Beam Combining *305*
Mercedeh Khajavikhan and James R. Leger
10.1 Introduction *305*
10.2 Coherent Beam Combining Requirements *306*
10.3 General Mathematical Framework of Passive Laser Resonators *307*
10.3.1 Coherent Beam Combining by a Simple Beam Splitter *308*
10.3.2 Effect of Wavelength Diversity *311*
10.4 Coupled Cavity Architectures Based on Beam Superposition *314*
10.4.1 Generalized Michelson Resonators *314*
10.4.2 Grating Resonators *318*
10.5 Parallel Coupled Cavities Based on Space-Invariant Optical Architectures *321*
10.5.1 Space-Invariant Parallel Coupled Resonators with Weakly Coupled Cavities *323*
10.5.2 Spatially Filtered Resonators and the Effect of Path Length Phase Errors *325*
10.5.3 Talbot Resonators *329*
10.6 Parallel Coupled Resonators Based on Space-Variant Optical Architectures: the Self-Fourier Cavity *336*
10.7 Conclusion *340*
Acknowledgments *341*
References *341*

11 Self-Organized Fiber Beam Combining *345*
Vincent Kermène, Agnès Desfarges-Berthelemot, and Alain Barthélémy
11.1 Introduction *345*
11.2 Principles of Passively Combined Fiber Lasers *346*
11.2.1 Different Configurations *346*
11.2.2 Principles *347*
11.3 Phase Coupling Characteristics *350*
11.3.1 Power Stability *350*
11.3.2 Cophasing Building Dynamics *351*
11.3.3 Frequency Tunability *353*
11.3.4 Effect of Laser Gain Mismatched on Combining Efficiency *354*
11.3.5 Pointing Agility *355*
11.3.6 Coherence Properties of Multiple Beams Phase Locked by Mutual Injection Process *356*
11.4 Upscaling the Number of Coupled Lasers *360*
11.4.1 Phasing Efficiency Evolution *360*
11.4.2 Main Influencing Parameters *360*
11.5 Passive Combining in Pulsed Regime *362*
11.5.1 Q-Switched Regime *362*
11.5.2 Mode-Locked Regime *365*
11.6 Conclusion *367*
References *368*

12 Coherent Combining and Phase Locking of Fiber Lasers *371*
Moti Fridman, Micha Nixon, Nir Davidson, and Asher A. Friesem
12.1 Introduction *371*
12.2 Passive Phase Locking and Coherent Combining of Small Arrays *372*
12.2.1 Efficient Coherent Combining of Two Fiber Lasers *372*
12.2.2 Compact Coherent Combining of Four Fiber Lasers *375*
12.2.3 Efficient Coherent Combining of Four Fiber Lasers Operating at 2 μm *376*
12.3 Effects of Amplitude Dynamics, Noise, Longitudinal Modes, and Time-Delayed Coupling *377*
12.3.1 Effects of Amplitude Dynamics *377*
12.3.2 Effects of Quantum Noise *381*
12.3.3 Effects of Many Longitudinal Modes *384*
12.3.4 Effects of Time-Delayed Coupling *388*
12.4 Upscaling the Number of Phase-Locked Fiber Lasers *391*
12.4.1 Simultaneous Spectral and Coherent Combining *391*
12.4.2 Phase Locking 25 Fiber Lasers *393*
12.5 Conclusion *398*
References *398*

13 Intracavity Combining of Quantum Cascade Lasers *401*
Guillaume Bloom, Christian Larat, Eric Lallier, Mathieu Carras, and Xavier Marcadet
13.1 Introduction *401*
13.2 External Cavity Passive Coherent Beam Combining *402*
13.2.1 Laser Scheme *403*
13.2.2 Modeling of the Coherent Beam Combining in External Cavity *404*
13.2.2.1 The Michelson Cavity *404*
13.2.2.2 General Case: The *N*-Arm Cavity *406*
13.2.3 Combining Efficiency in Real Experimental Conditions *408*
13.2.3.1 Influence of the Number of Arms *N* *408*
13.2.3.2 Influence of the Arm Length Difference ΔL *409*
13.3 Experimental Realization: Five-Arm Cavity with a Dammann Grating *410*
13.3.1 Dammann Gratings *410*
13.3.2 Quantum Cascade Lasers *413*
13.3.3 The Five-Arm External Cavity *414*
13.4 Subwavelength Gratings *418*
13.4.1 Principle *418*
13.4.2 Grating Design and Realization *419*
13.4.3 Antireflection Coating Design *422*
13.4.4 Calculated Performances *423*
13.5 Conclusion *423*
References *424*

14 Phase-Conjugate Self-Organized Coherent Beam Combination *427*
Peter C. Shardlow and Michael J. Damzen
14.1 Introduction *427*
14.2 Phase Conjugation *429*
14.2.1 Gain Holography *431*
14.2.2 Four-Wave Mixing within a Saturable Gain Media *433*
14.2.3 Self-Pumped Phase Conjugation *434*
14.2.3.1 Seeded Self-Pumped Phase-Conjugate Module *435*
14.2.3.2 Self-Starting Self-Adaptive Gain Grating Lasers *437*
14.3 PCSOCBC *438*
14.3.1 CW Experimental PCSOCBC *439*
14.3.2 Understanding Operation of PCSOCBC: Discussion *442*
14.3.3 Power Scaling Potential *444*
14.3.3.1 Scaling the Number of Modules *445*
14.3.3.2 Higher Power Modules *448*
14.3.3.3 Pulsed Operation *449*
14.4 Conclusions *450*
References *451*

15 Coherent Beam Combining Using Phase-Controlled Stimulated Brillouin Scattering Phase Conjugate Mirror *455*
Hong J. Kong, Sangwoo Park, Seongwoo Cha, Jin W. Yoon, Seong K. Lee, Ondrej Slezak, and Milan Kalal
15.1 Introduction *455*
15.2 Principles of SBS-PCM *456*
15.3 Reflectivity of an SBS-PCM *457*
15.4 Beam Combining Architectures *461*
15.5 Phase Controlling Theory *462*
15.6 Coherent Beam Combined Laser System with Phase-Stabilized SBS-PCMs *467*
15.6.1 Conventional Phase Fluctuation of SBS-PCM *467*
15.6.2 Phase Fluctuation without PZT Controlling *468*
15.6.3 Phase Fluctuation with PZT Controlling *471*
15.7 Conclusions *475*
References *475*

Index *479*
