Preface *XIII*

Part I Introduction 1

1 Introduction 3

1.1 Motivation 3

1.2 Comparing X-Rays with Optical Radiation 3

1.3 Novel X-Ray Sources 5

1.4 Unit Systems 6

1.5 Overview of Lagrangian and Hamiltonian Mechanics 9

1.5.1 Lagrangian Mechanics 9

1.5.2 Hamiltonian Mechanics 10

1.6 Approximations 12

1.6.1 Semiclassical Approximation 12

1.6.2 Dipole Approximation 13

2 Review of Some Concepts in Quantum Mechanics 15

2.1 Introduction 15

2.2 Dirac's Bra–Ket (Bracket) Notation 15

2.3 Eigenvalues and Eigenfunctions 16

2.4 Functions of Operators 18

2.5 Point Particle in a Radially Symmetric Potential 19

2.5.1 Radial Schrödinger Equation 19

2.5.2 Bound States in a Modified Attractive Coulomb Potential 21

2.5.3 Unbound States in a Coulomb Potential 21

2.5.4 Pure Coulomb Potential 22

2.6 Mixed States 23

2.6.1 Isolated Systems 23

2.6.2 Coupled Systems 25

2.7 Schrödinger and Heisenberg Pictures of Quantum Mechanics 26

2.7.1 Evolution Operator in the Schrödinger Picture 26

2.7.1.1 Evolution of Pure States 26

2.7.1.2	Evolution of Mixed States	27
2.7.2	Equivalent Pictures of Quantum Mechanics	28
2.7.3	Schrödinger Picture	28
2.7.4	Heisenberg Picture	29
2.8	Representing Quantum Mechanics in Position and Momentum Space	29
2.9	Transition from Classical Mechanics to Quantum Mechanics	31
2.10	Molecular Orbital Approximation	31
2.10.1	Derivation of the Hartree–Fock Equations	32
2.10.1.1	Energy of the Slater Determinant	33
2.10.1.2	Energy Minimization of the Slater Determinant	35
2.10.2	Interpretation of Orbital Energies	38
2.10.2.1	Ionization Potential	39
2.10.2.2	Electron Affinity	39
2.10.3	Post-Hartree–Fock Methods	40

Part II Quantization of the Free Electromagnetic Field 41

3	Classical Electromagnetic Fields	43
3.1	Introduction	43
3.2	Maxwell's Equations	43
3.3	Electromagnetic Potentials	44
3.3.1	Field Equations	44
3.3.2	Gauge Transformation	45
3.3.3	Coulomb Gauge	45
3.3.4	Lorenz Gauge	46
3.4	Transverse and Longitudinal Maxwell's Equations	46
3.4.1	Helmholtz Decomposition of Maxwell's Equations	47
3.4.2	Decomposition of the Field Equations in the Coulomb Gauge	47
3.5	The Free Electromagnetic Field as a Sum of Mode Oscillators	48
3.5.1	Density of States of the Radiation Field	53
3.5.2	Radiation Cavity in Thermodynamic Equilibrium	54
3.5.2.1	Rayleigh–Jeans Radiation Law	55
3.5.2.2	Planck's Radiation Law	56
3.6	Charged Particle in an Electromagnetic Field and the Minimal-Coupling Hamiltonian	56
4	Harmonic Oscillator	59
4.1	Introduction	59
4.2	Classical Harmonic Oscillator with One Degree of Freedom	59
4.3	Quantum Mechanical Harmonic Oscillator	60
4.4	N -Dimensional Quantum Mechanical Harmonic Oscillator	64
5	Quantization of the Electromagnetic Field	67
5.1	Introduction	67

5.2	Transition to a Quantum Mechanical Description	67
5.3	Photon Number States (Fock States)	71
5.4	Photons	73
5.4.1	Photon Momentum and Poynting Vector	73
6	Continuous Fock Space	77
6.1	Introduction	77
6.2	Three-Dimensional Continuum Field	77
6.2.1	Number States in the Continuum Field	80
6.2.1.1	Vacuum State	80
6.2.1.2	One-Photon States	80
6.2.1.3	Single-Mode Multiple-Photon States	81
6.2.1.4	Multimode States	82
6.3	One-Dimensional Treatment	84
6.3.1	Intensity	85
6.3.2	Description in the Time Domain	86
7	Coherence	89
7.1	Introduction	89
7.2	Review of Classical Coherence Theory	89
7.2.1	First-Order Coherence	90
7.2.2	Second-Order Coherence	92
7.2.3	Chaotic Light	93
7.2.3.1	First-Order Coherence of SASE FELs	93
7.2.3.2	Second-Order Coherence of SASE FELs	95
7.3	Quantum Coherence Theory	96
7.3.1	Coincidence Detection Using an Ideal Photon Detector	96
7.3.2	Field Correlations	98
7.3.3	Coherence	101
8	Examples for Electromagnetic States	103
8.1	Introduction	103
8.2	Quantum Phase of Radiation Fields	103
8.2.1	Dirac's Phase Operator	104
8.2.2	Quantum Sine and Cosine Operators	105
8.2.3	Phase State Projectors	108
8.3	Single-Mode States	109
8.3.1	Pure Single-Mode States	110
8.3.2	Statistical Mixtures of Single-Mode States	112
8.3.2.1	Thermally Excited States	113
8.3.3	Coherent States	113
8.4	Multimode States	117
8.4.1	Multimode Fock States	117
8.4.2	Multimode Coherent States	119

- 8.4.3 Localized Radiation (Wave Packets Describing Localized Photons) 120
- 8.4.3.1 Gaussian Wave Packets 122
- 8.4.4 Chaotic Light 123
- 8.4.4.1 Thermally Excited Multimode States 123
- 8.5 One-Dimensional Continuum Mode States 124

Part III Interaction of X-Rays with Matter 125

9 Interaction of the Electromagnetic Field with Matter 127

- 9.1 Introduction 127
- 9.2 Tensor Product of Matter and Radiation Hilbert Spaces 127
- 9.3 Interaction Hamiltonian for the Electromagnetic Field and Matter 128

10 Time-Dependent Perturbation Theory 133

- 10.1 Introduction 133
- 10.2 Interaction Picture 134
- 10.2.1 Pure States 134
- 10.2.2 Mixed States 136
- 10.3 Transition Probabilities 137
- 10.3.1 Time Dependence of Perturbations 137
- 10.3.2 Transition Probabilities 139
- 10.3.2.1 Pure States 139
- 10.3.2.2 Mixed States 140
- 10.4 Perturbative Expansion of Transition Amplitudes 141
- 10.4.1 Transition Amplitude in First Order 144
- 10.4.2 Transition Amplitude in Second Order 145
- 10.4.3 Transition Between Discrete States 148
- 10.4.4 Transition from Discrete to Continuous States 149
- 10.4.4.1 Example: Free Particle 150
- 10.4.5 Transition Between Continuous States 152
- 10.4.6 Scattering ($\hat{S}$) and Transition ($\hat{T}$) Matrices 153
- 10.5 Time-Dependent Perturbation Theory for Mixed States 154
- 10.5.1 Isolated System 154
- 10.5.2 Coupled Systems 155

11 Application of Perturbation Theory to the Interaction of Electromagnetic Fields with Matter 159

- 11.1 Introduction 159
- 11.2 Feynman Diagrams 160
- 11.3 Mixed States 161
- 11.3.1 Transition Probabilities 162

Part IV Applications of X-Ray–Matter-Interaction Theory 165**12 X-Ray Scattering by Free Electrons 167**

- 12.1 Introduction 167
- 12.2 Energy and Momentum Conservation 167
 - 12.2.1 Scattering of Photons by Free Electrons 167
 - 12.2.2 A Free Electron Cannot Absorb a Photon 170
- 12.3 Scattering Cross Section 171
- 12.4 Scattering From an Electron at Rest 176
 - 12.4.1 Kinematics 176
 - 12.4.2 Nonrelativistic Scattering Cross Section 177
 - 12.4.3 Polarization 178
 - 12.4.4 Relativistic Klein–Nishima Cross Section 179
- 12.5 Doppler Effect 179

13 Radiative Atomic Bound–Bound Transitions 183

- 13.1 Introduction 183
- 13.2 Emission of Photons 183
- 13.3 Lifetime and Natural Line Width 187
 - 13.3.1 Weisskopf–Wigner Theory 187
 - 13.3.2 Frequency Spectrum 191
 - 13.3.3 Breit–Wigner Procedure 191
- 13.4 Absorption of Photons 192
- 13.5 Einstein's A and B Coefficients 194
- 13.6 Radiative Atomic Bound–Bound Transitions in Mixed States 197

14 One-Photon Photoionization 201

- 14.1 Introduction 201
- 14.2 Photoionization in a Pure-State Radiation Field 201
- 14.3 Photoionization in a Mixed-State Radiation Field 204
- 14.4 Single-Electron Approximation for Photoionization 207
- 14.5 Photoionization of Hydrogen-Like Atoms 210
 - 14.5.1 Large Photon Energies 211
 - 14.5.2 Small Photon Energies 214
 - 14.5.3 Comparing Small and Large Photon Energies 217

15 Bremsstrahlung 221

- 15.1 Introduction 221
- 15.2 Electron–Nucleus Bremsstrahlung 221
- 15.3 Electron–Positron Bremsstrahlung 225
- 15.4 Electron–Electron Bremsstrahlung 229
 - 15.4.1 Quadrupole Nature of Bremsstrahlung 229
 - 15.4.2 Indistinguishable Particles 230
- 15.5 Inverse Bremsstrahlung Absorption 231

16	X-Ray Scattering	235
16.1	Introduction	235
16.2	Steady-State Scattering Formalism	236
16.2.1	Dipole Approximation	241
16.3	Elastic Scattering (Rayleigh Scattering)	241
16.3.1	Elastic Scattering for Large X-Ray Energies	242
16.3.2	Elastic Scattering for Intermediate X-Ray Energies	243
16.4	Raman Scattering	244
16.5	Compton Scattering	246
16.5.1	Nonresonant Compton Scattering	247
16.5.2	Resonant Raman – Compton Scattering	252
16.5.3	Infrared Divergence for Soft Scattered Photon Energies	252
16.6	Single-Electron Approximation for X-Ray Scattering	253
16.7	Short-Pulse Scattering	255
16.7.1	General Formalism	256
16.7.2	Plane-Parallel Light Pulse	260
16.7.3	Coherent Pulses	261
17	Relaxation Processes	265
17.1	Introduction	265
17.2	Auger Decay	266
17.2.1	Eigenstates Due to Coupling of a Discrete Level to a Continuum	266
17.2.1.1	Decay Rate	268
17.2.2	Autoionization in First-Order Perturbation Theory	269
17.2.2.1	Wentzel Treatment of the Auger Effect	270
17.2.2.2	Estimate for the Auger Rates	270
17.3	X-Ray Fluorescence following Photoionization	271
17.4	Branching Ratio	274
18	Multiphoton Photoionization	277
18.1	Introduction	277
18.2	Above-Threshold Ionization	278
18.3	Sequential Two-Photon Absorption	279
19	Threshold Phenomena	285
19.1	Introduction	285
19.2	One-Step Treatment of Threshold Excitations	286
19.3	Nonradiative Threshold Processes	288
19.3.1	Shake-Modified Resonant Autoionization	289
19.3.2	Post-Collision Interaction	289
	References	293
	Index	299
