

Index

a

- absorption coefficient 48, 173, 217, 234, 237
- absorption spectrum
 - functionalized carbon nanotubes 212
 - graphene 216
 - metallic carbon nanotubes 192
 - semiconducting nanotubes 173
- acoustic phonons 44, 46, 104, 152
- anisotropic carrier distribution 94, 98, 118, 128
- Auger processes
 - Auger recombination 91, 130
 - impact excitation 91, 130
- Auger scattering 91, 96, 105, 137, 141
- auto-correlation 59

b

- bath approximation 18
- bi-exponential decay 85, 108
- bilayer graphene 4
- Bloch equations 12, 296
- Boltzmann-like kinetic equation 14, 148, 297, 306, 311
- Born–Markov approximation 14, 297
- Born–Oppenheimer scheme 266

c

- carbon-based hybrid nanostructures 2, 171, 208
- carbon nanoribbons 4
- carbon nanotubes 1
 - (-1) semiconducting CNTs 31, 175, 180
 - (+1) semiconducting CNTs 31, 175, 180
 - applications 7
 - armchair CNTs 5, 24
 - boundary condition 27
 - chiral angle 24, 155, 180, 196
 - diameter 24, 155, 180, 196
 - families 31, 180, 182

- helical quantum numbers 30
- metallic CNTs 31, 148, 192, 201, 204
- properties 5
- symmetry 26
- synthesis 6
- Umklapp processes 30
- unit cell 25
- zigzag CNTs 5, 24, 175
- carrier–carrier interaction 10, 296
- carrier cooling 103, 107, 108, 116, 127
- carrier density 94, 96, 128, 135
- carrier–light interaction 10, 272
- carrier multiplication 96, 130, 135
- carrier occupation 11, 94, 148, 160
- carrier–phonon interaction 11, 266
- carrier–phonon matrix element 11, 44
 - carbon nanotubes 47, 150
 - graphene 45
- carrier–phonon relaxation in CNTs
 - chirality dependence 156
 - diameter dependence 155
 - excitation energy 154
 - intersubband scattering 156
- carrier temperature 105, 135
- carrier thermalization 102, 107, 108, 116, 127
- chemical potential 105, 125
- chirality dependence 180, 196
 - carrier–phonon scattering 155
 - excited excitonic transition 187
 - excitonic binding energy 182, 198
 - optical matrix element 38
 - oscillator strength 183, 199
 - transition energy 180, 196
- chirped pulses 61
- conductivity 216
- correlation expansion 12, 296
- Coulomb matrix element 10, 39
 - carbon nanotubes 41

- graphene 40
- Ohno potential 42
- screening 41, 44
- Coulomb renormalization 13, 176, 194, 220
- Coulomb scattering rates 16
- current 48, 231
- current density 48
- curvature effects 27

- d**
- density of states 33, 174
- dephasing 18, 97
 - off-diagonal 97
- depolarization effect 36
- detailed balance 14
- diameter dependence 180, 196
 - carrier–phonon scattering 155
 - excited excitonic transition 187
 - excitonic binding energy 182, 198
 - optical matrix element 39
 - oscillator strength 183, 199
 - transition energy 180, 196
- dielectric function 13, 41, 301
- difference-frequency generation 66
- differential transmission 49, 51, 86, 88, 108, 121, 141, 146, 239
- dipole approximation 48
- Dirac point 23, 88, 141

- e**
- electronic band structure 19
 - carbon nanotubes 24, 28
 - graphene 23
- electronic temperature 125
- energy conservation 14, 90
- energy density 94, 96, 104, 126, 128, 135
- energy dissipation 104
- excitation-induced dephasing 162
- excited excitonic transitions 180, 196
- exciton–dipole interaction 210
- excitonic basis set 204
- excitonic binding energy 182, 190
 - graphene 221
 - metallic carbon nanotubes 195, 198
 - semiconducting carbon nanotubes 179
- excitons 13
 - graphene 217, 220
 - metallic nanotubes 169, 194
 - semiconducting nanotubes 168, 178

- f**
- Fourier limit 58
- free-electron laser 69

- fullerene 1
- functionalized carbon nanotubes 171, 208

- g**
- gain 137
- graphene 1
 - applications 4
 - ballistic transport 3
 - Brillouin zone 19
 - doping 72
 - high-symmetry points 19
 - lattice 19
 - properties 3
 - scotch tape method 3
 - synthesis 3
- graphene samples
 - chemical vapor deposition 73
 - epitaxially grown graphene 3, 73
 - exfoliated graphene 3, 72
- graphite 1

- h**
- Hamilton operator 10, 251, 271
- Hartree–Fock approximation 13, 291, 296
- Heisenberg equation 11
- hierarchy problem 12, 279, 291
- hot phonons 18, 105, 110

- i**
- impact excitation 91, 130
- interband scattering 18
- intraband scattering 18

- k**
- Kataura plot 180, 196
- Kohn anomaly 45

- l**
- Lagrange formalism 242
- law of least action 246
- linear optics 48, 173, 217, 230

- m**
- Markov approximation 14, 90, 148, 158
- memory effects 14
- microscopic polarization 11, 95, 97, 120, 162, 173, 217
- molecular switch 209

- n**
- nearest-neighbor approximation 22
- Non-Markov dynamics 159

o

- observables 227
- Ohno potential 41
- optical assignment of CNTs 170
- optical excitation 93
- optical matrix element 10, 34
 - carbon nanotubes 36
 - graphene 34
- optical parametric generation 65
- optical phonons 44, 45, 104, 110, 149
- optical read-off 209
- optical susceptibility 48, 234
- orientational relaxation 98
- oscillator strength 183

p

- Pauli blocking 16
- phonon dispersion 45
- phonon occupation 11, 110
- phonon scattering rates 17
- phonon side-peaks 204
- polaron shift 208
- population inversion 137
- pump fluence 93, 116, 134
- pump-probe experiments 145
- pump-probe spectroscopy 51
 - artifacts 56
 - reflection geometry 52
 - signal-to-noise ratio 52
 - single-color 53, 75, 85, 86
 - temporal resolution 56
 - transmission geometry 52
 - two-color 55, 76

r

- Rabi frequency 12
- radiation coupling 219, 236
- radiation gauge 10, 48, 257
- Rayleigh scattering 201, 238
- refraction index 48
- relaxation channels 90
 - Auger scattering 91, 106, 130, 137
 - carrier-carrier scattering 90, 99, 108, 116, 158

- carrier-phonon scattering 92, 99, 108, 116
- interband scattering 90, 112
- intervalley scattering 92
- intraband scattering 90, 112
- parallel scattering 112

relaxation dynamics

- carbon nanotubes 145

s

- saddle-point exciton 215, 220
- saturation behavior 122
- screening 13, 41, 44
 - dielectric background screening 127, 189
 - intrinsic many-particle screening 195, 301
- second quantization 10, 241
- selection rules 37
- short radiation pulses 57
- single-cycle terahertz radiation 67
- spiropyran molecules 171, 208
- substrate
 - carbon nanotubes 162, 189
 - graphene 127
- supercontinuum pulses 71

t

- terahertz pulses 63, 67
- tight-binding approximation 21, 273
- titanium-sapphire laser 63
- trigonal warping effect 32, 180, 196

u

- universal absorption 215

v

- Van Hove singularity 29, 173, 193

w

- wave equation 231

z

- zone-folding approximation 27
