

Index

a

above-threshold ionization 93–94, 165, 271
 above-threshold photoemission 45–46, 155, 157, 161, 251, 302, 325
 above-threshold photon orders 156
 absorption paradox 143
 acceleration 15
 – theorem 202, 208
 adiabatic focusing 6, 290, 292
 adiabatic nanofocusing 282–286
 – experimental demonstration on tip 286–289
 – femtosecond optical control 291–295
 – nano-spectroscopic imaging 289–291
 – single transmitter quantum coherent control 295–297
 angle-resolved photoemission 309–313
 angular resolved photoemission from SiO₂ nanospheres 175, 176
 anisotropy 89, 112, 113, 132, 243, 288
 atomic phase 17–19
 attenuated total internal reflection (ATR) 286
 attosecond photoemission electron microscopy (ATTO-PEEM) 7
 attosecond pulse trains (APTs) 330, 360
 Auger decay 87

b

background potential 89–90
 Bessel function 173–174, 206, 214–215, 284
 Bloch functions 200–202, 212
 Bloch oscillations 204, 206
 Bloch theorem 257
 Bogoliubov–Born–Green–Kirkwood–Yvon (BBGKY) hierarchy 124

Boltzmann–Maxwell equations 124
 bulk and surface effects competition with radiation damping in resonant clusters 144–145

c

carrier envelope phase (CEP) 2, 6, 242, 249
 – -dependent photoemission from SiO₂ nanospheres 166–168
 – detection, using optical-field-induced currents 269, 271–273
 – effects and matter wave interference 160
 – in nanoplasmonic electron acceleration 66–69
 carriers 244
 cascading 274
 channel-closing 157
 chirped pulse amplification (CPA) 12, 340–341
 cluster dynamics in linear response regime 140–142
 coherent and incoherent electron dynamics 197–200
 coherent pulsed radiation 243
 coherent two-dimensional nanoscopy 329–330
 collective excitation/space charge and modifications 166
 conduction bands (CBS) 240, 243–246, 257, 259, 261–264, 266, 267
 Coulomb complexes 99–100
 – dynamics scaling 105
 – electron spectra formation 103–105
 – ionic background potential 102
 – photo-activation 101
 Coulomb repulsion 140, 353

d

- Debye number 121
- degeneracy parameter 121
- dielectric laser acceleration (DLA) 185
- dielectric nanospheres and experiments
 - CEP-dependent photoemission from SiO₂ nanospheres 165–168
 - collective excitation/space charge and modifications 166
 - photoemission/acceleration process theoretical modeling 168–170
- diffraction limit 39
- direct electrons 103
- dispersion effects 17–18
- Drude model 125

e

- effective electric field 166
- electric currents 235
 - CEP detection using optical-field-induced currents 269, 271–273
 - from vacuum tube to transistor 235–239
 - generation, with light 239–243
 - optical field control in large bandgap materials 243–262
 - strong-field induced changes of dielectric electronic properties attosecond probing 262–269
 - ultrafast photoactive logic circuits 273–275
- electromagnetic solver 130–131
- electron acceleration 41
- electron acceleration with laser light at dielectric nano-gratings 184–186
 - future acceleration mechanisms 189–190
 - near-field mode acceleration 186–188
 - proof-of-concept data 188, 187–189
- electron attosecond control at nanoscale metal tips 155–156
 - multi-photon ionization 156–157
 - – coherent effects 157
 - – light shifts 157–158
 - optical near-field sensor 162–164
 - sub-cycle dynamics 158
 - – CEP effects and matter wave interference 160
 - – recollision and rescattering 158–160
 - – strong-field physics modeling at metal tip 160–162
 - sub-laser-cycle duration electron source 164–165
- electron dynamics 3D model 229–232
- electron-energy bunching 94

- energy-dispersive X-ray spectroscopy (EDS) 27
- extended systems 87–88
 - Coulomb complexes 100
 - – dynamics scaling 105
 - – electron spectra formation 104
 - – ionic background potential 102
 - – photo-activation 101
 - multi-photon absorption 89
 - – energy absorption from intense light fields 90–97
 - – general evolution exposed to intense laser pulse 89–90
 - – hard and soft recollisions in atomic systems 93–94
 - – optical swingbys 94–97
 - – resonant absorption by electron motion out of phase with light field 97–99
 - nano-plasma transients on femtosecond scale 106
 - – dense non-equilibrium nano-plasma creation and probing 106, 101–108, 111
 - – ultrafast collective electron dynamics in composite systems 111–115
- extreme ultraviolet (XUV) 3, 7, 177–178, 181–185, 242, 251, 263–266, 269, 330, 332, 356–360
- extreme ultraviolet (XUV) radiation
 - nano-antennae assisted emission 11–12
 - experimental idea 12–13
 - experiments
 - – experimental results 26–28
 - – experimental-setup 24–26
 - – gas density 28–29
 - – historical overview 23–24
 - – spectra 29–31
 - high-harmonic generation (HHG) 14
 - – field inhomogeneities 19–20
