Preface *XIII*

List of Contributors *XV*

1	Current Concepts for Optical Path Enhancement in Solar Cells	1
	<i>Alexander N. Srafke and Ralf B. Wehrspohn</i>	
1.1	Introduction	1
1.2	Planar Antireflection Coatings	2
1.3	Optical Path Enhancement in the Ray Optical Limit	4
1.4	Scattering Structures for Optical Path Enhancement	5
1.5	Resonant Structures for Optical Path Enhancement	7
1.6	Ultra-Light Trapping	10
1.7	Energy-Selective Structures as Intermediate Reflectors for Optical Path Enhancement in Tandem Solar Cells	13
1.8	Comparison of the Concepts	16
1.9	Conclusion	17
	References	17
 2	 The Principle of Detailed Balance and the Opto-Electronic Properties of Solar Cells	 21
	<i>Uwe Rau and Thomas Kirchartz</i>	
2.1	Introduction	21
2.2	Opto-Electronic Reciprocity	21
2.2.1	The Principle of Detailed Balance	21
2.2.2	The Shockley–Queisser Limit	22
2.2.3	Derivation of the Reciprocity Theorem	24
2.3	Connection to Other Reciprocity Theorems	29
2.3.1	Emitter and Collector Currents in Transistors	29
2.3.2	Tellegen’s Network Theorem	30
2.3.3	Differential Reciprocity Relations by Wong and Green	31
2.3.4	Würfel’s Generalization of Kirchhoff’s Law	33
2.3.5	Reciprocity Relation for LED Quantum Efficiency	33
2.3.6	Shockley–Queisser Revisited	34
2.3.7	Influence of Light Trapping	35

2.4	Applications of the Opto-Electronic Reciprocity Theorem	37
2.4.1	Experimental Verifications	37
2.4.2	Spectrally Resolved Luminescence Analysis	39
2.4.3	Luminescence Imaging	40
2.5	Limitations to the Opto-Electronic Reciprocity Theorem	43
2.6	Conclusions	44
	References	44
3	Rear Side Diffractive Gratings for Silicon Wafer Solar Cells	49
	<i>Marius Peters, Hubert Hauser, Benedikt Bläsi, Matthias Kroll, Christian Helgert, Stephan Fahr, Samuel Wiesendanger, Carsten Rockstuhl, Thomas Kirchartz, Uwe Rau, Alexander Mellor, Lorenz Steidl, and Rudolf Zentel</i>	
3.1	Introduction	49
3.1.1	Gratings for Solar Cells – Basic Idea and Challenges	49
3.1.2	A Short Literature Review	50
3.2	Principle of Light Trapping with Gratings	52
3.3	Fundamental Limits of Light Trapping with Gratings	56
3.4	Simulation of Gratings in Solar Cells	58
3.4.1	Optical Simulation Using RCWA/FMM	58
3.4.2	Optical Simulation Using the Matrix Method	61
3.4.3	Electro-Optically Coupled Simulation Using RCWA and Sentaurus Device	65
3.5	Realization	67
3.5.1	Electron-Beam Lithography	68
3.5.2	Self-Organizing Photonic Crystals	72
3.5.3	Fabrication of Rear Side Gratings via Interference Lithography and Nanoimprint Lithography	75
3.6	Topographical Characterization	78
3.6.1	Atomic Force Microscopy	78
3.6.2	Scanning Electron Microscopy	80
3.6.3	Focused Ion Beam Milling	81
3.7	Summary	84
	References	84
4	Randomly Textured Surfaces	91
	<i>Carsten Rockstuhl, Stephan Fahr, Falk Lederer, Karsten Bittkau, Thomas Beckers, Markus Ermes, and Reinhard Carius</i>	
4.1	Introduction	91
4.2	Methodology	93
4.2.1	Structure of a Referential Solar Cell and Description of Available Substrates	94
4.2.2	Rigorous Methods	96
4.2.3	Scalar Methods	97
4.2.4	Properties of Interest	98

4.2.5	Near-Field Scanning Optical Microscopy	99
4.3	Properties of an Isolated Interface	100
4.3.1	Near-Field Properties	100
4.3.2	Far-Field Properties	102
4.4	Single-Junction Solar Cell	104
4.4.1	Absorption Enhancement	104
4.4.2	Design of Optimized Randomly Textured Interfaces	106
4.5	Intermediate Layer in Tandem Solar Cells	110
4.6	Conclusions	112
	Acknowledgments	113
	References	113
5	Black Silicon Photovoltaics	117
	<i>Kevin FÜchsel, Matthias Kroll, Martin Otto, Martin Steglich, Astrid Bingel, Thomas Käsebier, Ralf B. Wehrspohn, Ernst-Bernhard Kley, Thomas Pertsch, and Andreas Tünnermann</i>	
5.1	Introduction	117
5.1.1	Fabrication Methods	117
5.1.2	Reactive Ion Etching	119
5.1.3	Laser Processing	122
5.1.4	Chemical and Electrochemical Etching	124
5.2	Optical Properties and Light Trapping Possibilities	126
5.2.1	Overview	126
5.2.2	ICP-RIE Black Silicon	128
5.2.3	Influence of Dielectric Coatings	130
5.2.4	Influence of the Substrate Thickness and Limiting Efficiency	132
5.3	Surface Passivation of Black Silicon	135
5.3.1	Requirements for Black Silicon Passivation	136
5.3.2	Possible Passivation Schemes	136
5.3.3	Passivation of Black Silicon Surfaces	139
5.3.3.1	Surface Damage and Sample Cleaning	139
5.3.3.2	Effective Passivation of ICP-RIE Black Silicon	140
5.4	Black Silicon Solar Cells	142
	References	144
6	Concentrator Optics for Photovoltaic Systems	153
	<i>Andreas Gombert, Juan C. Miñano, Pablo Benitez, and Thorsten Hornung</i>	
6.1	Fundamentals of Solar Concentration	153
6.1.1	Introduction	153
6.1.2	Concentration and Acceptance Angle	153
6.1.3	Optical Efficiency	157
6.1.4	Effect of Spatial and Spectral Non-uniformities on the Cell Illumination	158
6.2	Optical Designs	159
6.2.1	Classical Imaging Concentrators	160

6.2.2	Nonimaging Secondary Optics	161
6.2.3	Advanced Concentrator Designs	162
6.2.4	Freeform SMS Concentrators	163
6.2.5	Multifold Köhler Concentrators	164
6.2.6	Comparison	166
6.3	Silicone on Glass Fresnel Lenses	169
6.3.1	Physical Influence of Lens Temperature	170
6.3.2	Influence of Lens Temperature on Efficiency	172
6.4	Considerations on Concentrators in HCPV Systems	175
6.4.1	General Requirements on CPV Concentrator Optics	175
6.4.2	Design Considerations	176
6.4.3	Experiences with Concentrator Designs	178
6.5	Conclusions	179
	References	179
7	Light-Trapping in Solar Cells by Directionally Selective Filters	183
	<i>Carolín Ulbrich, Marius Peters, Stephan Fahr, Johannes Üpping, Thomas Kirchartz, Carsten Rockstuhl, Jan Christoph Goldschmidt, Andreas Gerber, Falk Lederer, Ralf Wehrspohn, Benedikt Bläsi, and Uwe Rau</i>	
7.1	Introduction	183
7.2	Theory	185
7.2.1	Radiative Efficiency Limit	185
7.2.2	Ultra-Light-Trapping	187
7.2.2.1	Universal Light-Trapping Limit for Completely Randomized Light	187
7.2.3	Annual Yield for Directionally Selective Solar Absorbers	190
7.3	Filter Systems	192
7.3.1	1D Layer Stack Rugate Filters	192
7.3.2	3D Photonic Crystal Opal Structures	193
7.4	Experimental Realization	197
7.4.1	Bragg Filter Covering a Hydrogenated Amorphous Silicon Solar Cell	197
7.4.2	Bragg Filter Covering a Germanium Solar Cell	201
7.5	Summary and Outlook	202
	References	203
8	Linear Optics of Plasmonic Concepts to Enhance Solar Cell Performance	209
	<i>Gero von Plessen, Deepu Kumar, Florian Hallermann, Dmitry N. Chigrin, and Alexander N. Sprafke</i>	
8.1	Introduction	209
8.2	Metal Nanoparticles	210
8.2.1	Optical Excitations in Metal Nanoparticles	210
8.2.2	Control of Optical Properties	212
8.2.2.1	Resonance Energies of Particle Plasmons	213

8.2.2.2	Linewidths of Particle-Plasmon Resonances	215
8.2.2.3	Peak Heights of Particle-Plasmon Resonances	216
8.2.2.4	Scattering Quantum Efficiencies	216
8.2.2.5	Light-Scattering Patterns	217
8.2.2.6	Near-Field Effects	217
8.2.2.7	Combinations of Effects	218
8.3	Surface-Plasmon Polaritons	218
8.4	Front-Side Plasmonic Nanostructures	219
8.5	Rear-Side Plasmonic Nanostructures	221
8.6	Further Concepts	222
8.7	Summary	226
	Acknowledgments	226
	References	227
9	Up-conversion Materials for Enhanced Efficiency of Solar Cells	231
	<i>Jan Christoph Goldschmidt, Stefan Fischer, Heiko Steinkemper, Barbara Herter, Sebastian Wolf, Florian Hallermann, Gero von Plessen, Jacqueline Anne Johnson, Bernd Ahrens, Paul-Tiberiu Miclea, and Stefan Schweizer</i>	
9.1	Introduction	231
9.2	Up-Conversion in Er^{3+} -Doped ZBLAN Glasses	232
9.2.1	Samples	232
9.2.2	Optical Absorption	233
9.2.3	Up-Conversion	234
9.3	Up-Conversion in Er^{3+} -Doped $\beta\text{-NaYF}_4$	237
9.3.1	Device Measurements	239
9.4	Simulating Up-Conversion with a Rate Equation Model	240
9.5	Increasing Up-Conversion Efficiencies	242
9.5.1	The Up-Converter Material	242
9.5.1.1	Phonon Energy	242
9.5.1.2	Doping Concentration	243
9.5.2	The Environment around the Up-Converter	245
9.5.2.1	Plasmon Enhanced Up-Conversion	245
9.5.2.2	Modeling Dielectric Nanostructures	246
9.5.3	Spectral Concentration	248
9.6	Conclusion	251
	Acknowledgments	252
	References	252
10	Down-Conversion in Rare-Earth Doped Glasses and Glass Ceramics	255
	<i>Stefan Schweizer, Christian Paßlick, Franziska Steudel, Bernd Ahrens, Paul-Tiberiu Miclea, Jacqueline Anne Johnson, Katharina Baumgartner, and Reinhard Carius</i>	
10.1	Introduction	255
10.2	Physical Background	257

10.2.1	Rare-Earth Ions	257
10.2.2	Glass Systems	258
10.2.2.1	Phonons	259
10.2.2.2	ZBLAN Glasses	259
10.2.2.3	Borate Glasses	260
10.3	Down-Conversion in ZBLAN Glasses and Glass Ceramics	260
10.3.1	Samples	261
10.3.2	Glass-Ceramic Cover Glasses for High Efficiency Solar Cells	261
10.3.2.1	Absorption	262
10.3.2.2	Short-Circuit Current	264
10.3.2.3	Internal Conversion Efficiency	265
10.3.2.4	Quantum Efficiency Increase	266
10.3.3	Influence of Multivalent Europium-Doping	267
10.3.3.1	X-Ray Absorption near Edge Structure	268
10.3.3.2	X-Ray Diffraction	270
10.3.3.3	Photoluminescence	272
10.3.4	Conclusion	274
10.4	Down-Conversion in Sm-Doped Borate Glasses for High-Efficiency CdTe Solar Cells	275
10.4.1	Samples	275
10.4.2	External Quantum Efficiency of CdTe Solar Cells	276
10.4.3	Optical Absorption and Fluorescence Emission	276
10.4.4	Efficiency Increase	277
10.4.5	Conclusion	279
10.5	Summary	280
	Acknowledgment	281
	References	281
11	Fluorescent Concentrators for Photovoltaic Applications	283
	<i>Jan Christoph Goldschmidt, Liv Prönneke, Andreas Büchtemann, Johannes Gutmann, Lorenz Steidl, Marcel Dyrba, Marie-Christin Wiegand, Bernd Ahrens, Armin Wedel, Stefan Schweizer, Benedikt Bläsi, Rudolf Zentel, and Uwe Rau</i>	
11.1	Introduction	283
11.2	The Theoretical Description of Fluorescent Concentrators	285
11.2.1	Detailed Balance Considerations	285
11.2.2	Photonic Structures to Increase Fluorescent Collector Efficiency	286
11.2.3	Possible System Configurations – Side-Mounted and Bottom-Mounted Solar Cells	287
11.2.3.1	Thermodynamic Efficiency Limits of Fluorescent Concentrators	290
11.2.3.2	Non-perfect Photonic Structure	292
11.2.3.3	Luminescent Materials in Photonic Structures	293
11.3	Materials for Fluorescent Concentrators	296

11.3.1	Systems Based on Organic Matrix Materials	296
11.3.1.1	The Matrix Material	296
11.3.1.2	The Luminescent Species	299
11.3.2	Completely Inorganic Systems Based on Rare Earths	304
11.4	Experimentally Realized Fluorescent Concentrator Systems	307
11.4.1	Systems with Side-Mounted Solar Cells	307
11.4.2	Systems with Bottom-Mounted Monocrystalline Silicon Solar Module	308
11.4.3	Increasing Efficiency with Photonic Structures	310
11.4.3.1	Systems with Side-Mounted III–V Solar Cell	310
11.4.3.2	Systems with Bottom-Mounted Amorphous Silicon Solar Cell	312
11.5	Conclusion	314
	Acknowledgments	314
	References	315
12	Light Management in Solar Modules	323
	<i>Gerhard Seifert, Isolde Schwedler, Jens Schneider, and Ralf B. Wehrspohn</i>	
12.1	Introduction	323
12.2	Fundamentals of Light Management in Solar Modules	324
12.2.1	Basic Physical Concepts of Light Management in Solar Modules	324
12.2.1.1	Optical Losses due to Reflection and Absorption	324
12.2.1.2	Optical Description of Textured Interfaces or Surfaces	326
12.2.1.3	Spectral Effects and Solar Concentration	329
12.2.1.4	Effects of Incidence Angle Variation and Diffuse Light	331
12.2.2	Assessment of the Optical Performance of Solar Modules	331
12.2.2.1	Experimental Techniques	331
12.2.2.2	Simulation Approaches and Studies	333
12.3	Technological Solutions for Minimized Optical Losses in Solar Modules	334
12.3.1	Minimization of Optical Losses in Front Glass Sheets	334
12.3.2	Anti-reflection (AR) Technologies for PV Module Front Surface	336
12.3.2.1	Nano-scale Technologies for Anti-reflective Treatment of PV Front Glass	336
12.3.2.2	Micro-scale Structures for Light-Trapping on PV Front Glasses	338
12.3.3	Material Selection and Optimization for Encapsulation Film	338
12.3.4	Minimization of Losses due to Metallization and Contact Tabs	340
12.3.5	Optical Optimization of Cell Front and Back Interface	342
12.3.6	Redirection of Light from Cell Interspaces	343
12.4	Outlook	343
