Index

a

absolute neutrino mass 103
– cosmology 313
– neutrinoless double-beta decay 112
– tritium beta decay 106
anomalies 21
– Adler–Bell–Jackiw anomaly 21
– anomaly cancellation 23, 163, 249
– axial anomaly 23
– Furry's theorem 23
– gauge anomalies 23
appendix on A_4 group theory
– characters and multiplication tables 378
appendix on BRpV model
– mass matrices and couplings 383
appendix on conventions
– relating 2- and 4-component spinors 345
– special relativity and Dirac matrices 343
appendix on dark matter annihilation
– Feynman diagrams for Section 17.6.2 391
appendix on Majorana fermions
– Feynman rules 349
appendix on MSSM
– masses and couplings 375
appendix on standard model
– complete set of Feynman rules 356

b

bilinear R-parity violation 199
– approximate solar angle and scale 216, 218
– atmospheric neutrino sector 209
– BRpV couplings 204
– BRpV mass matrices 202
– BRpV scalar potential 200
– BRpV superpotential 199
– Constraining BRpV parameters 211
– LSP e^+e^- production cross section 222
– LSP decay branching ratios 225
– LSP decay Feynman graphs 225
– LSP decay length at LHC energies 223
– one-loop neutrino masses and mixings 206
– probing neutrino mixing in LSP decays 229
– slepton LSP decay correlations 232
– slepton LSP production and decay 230
– solar neutrino sector 210
– stop LSP decays at LHC 233
– tree-level neutrino masses and mixings 205

– XENON 321, 330, 334
– XMASS 116

f

family symmetries 285
– a new lepton-quark mass relation 298
– a realistic A_4-based standard model 298
– bi-large pattern 288
– fitting the CKM matrix 301
– flavour symmetries and unification 304
– prototype SUSY A_4 model 289
– revamped SUSY A_4 model 295
– tri-bimaximal pattern 287
Fermi constant 30, 63, 100, 311
Fermilab 73, 180
Fritz Zwicky 5, 316

g

gamma matrices 42, 341, 347
gauge coupling constant unification 36, 154, 179, 244, 246, 252, 255, 261, 274, 302
Gell-Mann matrices 24
Gerard 't Hooft 19
Gerard t Hooft naturalness 133
Glashow, Salam and Weinberg 9
grand unification 249
– anomaly cancellation 24, 249
– intermediate BL scale in SO(10) 262
– intermediate left-right scale in SO(10) 257
– intermediate Pati–Salam scale in SO(10) 249, 258, 303
– intermediate scales in SO(10) 256
– low-scale seesaw in SO(10) 263
– – inverse seesaw 263
– – linear seesaw 263
– predicting θ_W 251
– proton decay 34, 251
– standard SO(10) 254
– SU(5) 249
Gross and Wilczek 25

h

hierarchy problem 2, 34, 155
Higgs production at e^+e^- colliders 136
– Higgs-strahlung processes 136
– vector boson fusion 138
Higgs production at hadron colliders 140
– associated with heavy quarks 142
– associated with the W/Z bosons 140
– cross section summary 142
– gluon–gluon fusion 141
– vector boson fusion 141
Higgs SM decays 143
– $H \to VV*$ decays 144, 145
– $H \to Z\gamma$ decay 146
– $H \to \gamma\gamma$ decay 146
– $H \to f\overline{f}$ decay modes 143
– $H \to gg$ decay 147
– Higgs SM decay summary 147
– two-body W/Z decay modes 144

i

invisible Higgs decays to majorons 148, 195

l

left–right symmetry 238
– charged gauge boson masses 238
– constraints 243

– direct searches for left–right symmetry 244
– low-scale seesaw: inverse and linear 241
– multiplet content 238
– neutral gauge boson masses 239
– standard seesaw 240
– Yukawa terms 240
lepton flavour violation 265
– experimental limits 90
– history of LFV experiments 266
– LFV in decays RH neutrino decays 279
– LFV in slepton decays 279
– low-scale models 263
– models for charged LFV 271
– $\mu^+ \to e^+\gamma$ decay 268
– muon to electron conversion in nuclei 269
– type I supersymmetric seesaw 274
– type II supersymmetric seesaw 275
lepton mixing matrix 45
– Dirac CP phase 47
– Dirac neutrinos 45
– Majorana CP phase 47
– Majorana neutrinos 47
– rectangular mixing matrix 48, 89, 266
– symmetric parametrization 47
– unitary case 47
leptonic charged current 45

m

Majorana neutrinos
– Anapole moment 53
– Confusion theorem 53
– CP properties 50
– electromagnetic properties 52
– Feynman rules 349
– Lee–Yang two-component neutrino 44
– Majorana propagator 44, 349
– Majorana spinor 43
– Majorana spinor quantization 43
– pseudo-Dirac neutrino 113
– quasi-Dirac neutrino 113
– transition magnetic moments 53
– two-component spinor 41
Masatoshi Koshiba 3
mass eigenstate basis 45
minimal supersymmetric standard model 162
– charge and color breaking minima 166
– charged lepton mass matrix 172
– chargino mass matrix 168
– constrained MSSM 167
– coupling constant unification 179
– experimental constraints 180
– MSSM charged current couplings 177
– MSSM couplings 174
– MSSM Higgs bosons 163
– MSSM Higgs potential 165
– MSSM mass matrices 168
– MSSM particle content 162
– MSSM superpotential 164
– MSSM SUSY breaking Lagrangian 164
– neutralino mass matrix 169
– slepton mass matrices 175
– unbounded from below 166
minimization or tadpole conditions 200
MSW effect 4, 63, 101

n

Nambu–Goldstone boson 15, 129, 146, 170, 183, 184, 207, 239, 336
neutral Higgs mass matrix 170, 383
neutrino cosmology
– big bang nucleosynthesis 315
– Bullet Cluster 318
– CMB anisotropy spectrum measurement 319
– cold dark matter 320
– dark matter detection 321
– dark matter in the Universe 309
– decaying gravitino dark matter in BRPV 340
– galaxy rotation curve 318
– hot dark matter 321
– Majoron as decaying dark matter 337
– neutrino decoupling 314
– sneutrino DM from inverse seesaw 335
– the cosmic neutrino background 313
– universe content 320
– warm dark matter 321
– WIMP DM from flavour symmetry 333
– WIMP scotogenic dark matter 326
neutrino neutral current 50
– projective 50
– seesaw schemes 50
neutrino oscillation robustness 88
– convective zone magnetic fields 96
– neutrino oscillations in “noisy” Sun 92
– non-standard neutrino interactions 88
– probing neutrino properties 97
– probing the Sun with solar neutrino data 93
– random solar density fluctuations 92
– solar neutrino survival probabilities 89
– spin flavour precession 94
– turbulent magnetic fields 97
neutrino oscillations 57, 87
– accelerator neutrino data 73

neutrino oscillations (*contd.*)
– atmospheric neutrino data 69
– neutrino oscillations *in vacuo* 59
– neutrino oscillations in matter 62
– normal and inverted spectra 77, 82
– reactor neutrino data 67
– solar neutrino data 65
– solar neutrino oscillation 'landscape' 82
– solar neutrino survival probability 63
– the measurement of θ_{13} 74
– three-neutrino oscillation analysis 76
– three-neutrino oscillation parameters 77
neutrinoless double-beta decay 51, 110
– black box theorem 120
– CP properties 51
– current sensitivities 114
– majoron emission 111
– mass mechanism 112
– probing left-right contributions 119
– sensitivity to flavour 115
– short range new physics contributions 117
– symmetrical versus PDG form 113
– Zee–Babu model 122
Noether's theorem 130

p
Passarino–Veltman 146, 206, 340
Peter Higgs & Francois Englert 2
Planck mass 30, 124, 154, 311
Politzer 25

q
quark mass matrices 16, 173

r
R-parity 161, 183, 199, 221, 334
Ray Davis 3

s
Seesaw mechanism
– inverse seesaw 50, 132, 147, 263, 267, 335
– linear seesaw 50, 90, 241, 263, 267, 335
– majoron profile 130
– majoron-neutrino couplings 131
– perturbative diagonalization 127
– seesaw majoron 127
– type I 125, 151, 267, 291, 325, 329
– type II 125, 274, 275
– type III 125, 275, 325, 329
– Vev seesaw 128, 238
spontaneous R-parity violation 184
– a simple viable model 185
– Higgs boson spectrum 192
– invisible CP-even Higgs decays 195
– invisible CP-odd Higgs decays 197
– invisible Higgs production 194
– radiative breaking 189
– SUSY majoron 184
– tree level breaking 187
standard model 9
– charged current Lagrangian 16
– CKM matrix 16
– complete Lagrangian 355
– covariant derivatives 11
– electromagnetic interactions 10
– electroweak gauge boson masses 15, 31
– electroweak gauge bosons 10
– experimental tests of the SM 30
– Faddeev–Popov ghosts 17, 357
– Feynman rules for QCD 358
– Feynman rules for the electroweak part 359
– field assignments 12
– Glashow–Iliopoulos–Maiani mechanism 16
– Goldstone theorem 15, 183
– Green functions 20
– Higgs boson Lagrangian 14
– Higgs boson mass 28
– Higgs scalar doublet 13
– higher order corrections 30
– Minimal subtraction 30
– Neutron electric dipole moment 24
– QCD Lagrangian 24
– quantization in the standard model 17
– quantum chromodynamics 9, 24
– quantum electrodynamics 9
– quantum numbers 11
– renormalization group 20
– renormalization group equations 21, 29
– renormalization in the standard model 20
– scattering of longitudinal gauge bosons 25
– Slavnov–Taylor identities 19
– spontaneous symmetry breaking 13
– stability bound 28
– stability of the electroweak vacuum 29
– standard model matter fields 16
– strong CP problem 24
– $SU(3)_c \times SU(2)_L \otimes U(1)_Y$ gauge group 9
– top quark mass 31
– triviality bound 28
– unitarity in the standard model 25
– unitary gauge 14
– Ward–Takahashi identities 19
– weak interactions 9, 10
– Yukawa Lagrangian 16

standard solar model
– helioseismology 87, 92
– neutrino fluxes 65
– solar convective zone 91
– solar magnetic fields 91, 93, 94
– solar radiative zone 91
supersymmetry 155
– bilinear R-parity violation 199
– chiral superfield 158
– covariant derivative 159
– Fayet–Iliopoulos D-term 160
– gauge supermultiplet 158
– gauginos 158
– kinetic terms 159
– lightest supersymmetric particle 161
– motivations for supersymmetry 155
– MSSM 162
– self interactions of the gauge multiplet 159
– self interactions of the matter multiplet 160
– soft supersymmetry breaking 161
– spontaneous R-parity violation 183
– supersymmetric Lagrangians 158, 160
– supersymmetry algebra 156
– supersymmetry representations 157
– WIMP dark matter candidate 161

t
tritium beta decay
– relativistic kinematics 104
– three neutrino case 106
two-neutrino double-beta decay 110

w
weak interaction basis 45
Weinberg dimension five operator 41, 123, 324
Wess & Zumino 155
WIMP 6, 161, 321
Wolfenstein 113
